5.2.2	Assignment: Application Updates with MacUpdate Desktop .....	117
5.3	Additional Reading .....	119
6	User Accounts .....	121
6.1	User Accounts .....	122
6.2	Never Log in As an Administrator .....	124
6.2.1	Assignment: Enable the Root User .....	124
6.2.2	Assignment: Login as the Root User .....	128
6.2.3	Assignment: Change the Root User Password .....	131
6.2.4	Assignment: Disable the Root User .....	132
6.2.5	Assignment: Create an Administrative User Account .....	132
6.2.6	Assignment: Change from Administrator to Standard User .....	134
6.3	Application Whitelisting and More with Parental Controls .....	136
6.3.1	Assignment: Configure a Managed with Parental Controls Account .....	137
6.3.2	Assignment: View Parental Controls Logs .....	148
6.4	Policy Banner .....	150
6.4.1	Assignment: Create a Policy Banner .....	150

## Contents in Detail

7	Storage Device.....	153
7.1	Block Access to Storage Devices .....	154
7.1.1	Assignment: Disable USB, FireWire, and Thunderbolt Storage Device Access .....	154
7.1.2	Assignment: Enable USB, FireWire, and Thunderbolt Storage Device Access .....	155
7.2	FileVault 2 Full Disk Encryption .....	156
7.2.1	Assignment: Boot into Target Disk Mode.....	157
7.2.2	Assignment: Boot into Recovery HD Mode .....	157
7.2.3	Assignment: Boot into Single-User Mode.....	158
7.2.4	Assignment: Enable and Configure FileVault 2 .....	158
7.3	FileVault Resistance to Brute Force Attack.....	162
7.4	Remotely Access and Reboot a FileVault Drive .....	163
7.4.1	Assignment: Temporarily Disable FileVault.....	163
8	Sleep and Screen Saver.....	165
8.1	Require Password After Sleep or Screen Saver .....	166
8.1.1	Assignment: Require Password After Sleep or Screen Saver .....	166
9	Malware.....	171
9.1	Anti-Malware.....	172
9.1.1	Assignment: Install and Configure Bitdefender (Home Users Only).....	176
9.1.2	Assignment: Install and Configure Bitdefender GravityZone Endpoint Security (Business Users) .....	192
9.2	Additional Reading.....	209
10	Firewall.....	211
10.1	Firewall .....	212
10.1.1	Assignment: Activate the Firewall.....	213
10.1.2	Assignment: Close Unnecessary Ports.....	216
11	Firmware Password.....	223
11.1	EFI Chip .....	224
11.1.1	Assignment: Create a Firmware Password.....	224
11.1.2	Assignment: Test the Firmware Password .....	225
11.1.3	Assignment: Remove the Firmware Password .....	225
12	Lost or Stolen Device .....	227
12.1	Find My Mac.....	228
12.1.1	Assignment: Activate and Configure Find My Mac .....	228

## Contents in Detail

12.1.2	Assignment: Use Find My Mac From A Computer.....	234
12.1.3	Assignment: Use Find My Mac From An iPhone or iPad .....	238
12.2	Prey241	
12.2.1	Assignment: Enable the Guest User Account .....	241
12.2.2	Assignment: Create a Prey Account.....	242
12.2.3	Assignment: Install Prey .....	245
12.2.4	Assignment: Configure Prey .....	247
13	Local Network.....	251
13.1	Ethernet Broadcasting .....	252
13.2	Ethernet Insertion .....	253
13.3	Wi-Fi Encryption Protocols .....	254
13.4	Routers: An Overview .....	256
13.4.1	Assignment: Determine Your Wi-Fi Encryption Protocol.....	257
13.4.2	Assignment: Secure an Apple Airport Extreme Base Station .....	259
13.4.3	Assignment: Configure WPA2 On a Non-Apple Router.....	263
13.5	Use MAC Address to Limit Wi-Fi Access.....	267
13.5.1	Assignment: Restrict Access by MAC Address on an Apple Airport.....	267
13.5.2	Assignment: Restrict Access by MAC Address to A Non-Apple Router .....	275
13.6	Router Penetration.....	284
13.6.1	Assignment: Verify Apple Airport Port Security Configuration .	285
13.6.2	Assignment: Verify Non-Apple Airport Router Security Configuration .....	291
14	Web Browsing.....	297
14.1	HTTPS.....	298
14.1.1	Assignment: Install HTTPS Everywhere .....	300
14.2	Choose a Browser.....	304
14.3	Private Browsing .....	305
14.3.1	Assignment: Safari Private Browsing.....	305
14.3.2	Assignment: Firefox Private Browsing .....	307
14.3.3	Assignment: Google Chrome Incognito Mode .....	308
14.4	Secure Web Searches .....	310
14.4.1	Assignment: Make DuckDuckGo Your Safari Default Search Engine.....	310

## Contents in Detail

14.4.2	Assignment: Make DuckDuckGo Your Firefox Default Search Engine.....	311
14.4.3	Assignment: Make DuckDuckGo Your Chrome Default Search Engine.....	312
14.5	Clear History.....	314
14.5.1	Assignment: Clear the Safari History.....	314
14.5.2	Assignment: Clear the Firefox Browsing History.....	315
14.5.3	Assignment: Clear the Chrome History .....	316
14.6	Browser Plug-Ins.....	318
14.6.1	Assignment: Install Traffilight Plug-In for Safari.....	318
14.6.2	Assignment: Install Traffilight Plug-In for Google Chrome .....	321
14.6.3	Assignment: Install Traffilight For Firefox .....	323
14.6.4	Assignment: Find and Remove Extensions from Safari .....	325
14.6.5	Assignment: Find and Remove Extensions from Google Chrome.....	326
14.6.6	Assignment: Find and Remove Add-Ons from Firefox .....	327
14.7	Fraudulent Websites.....	329
14.8	Do Not Track.....	333
14.8.1	Assignment: Secure Safari .....	334
14.8.2	Assignment: Secure Firefox.....	335
14.8.3	Assignment: Secure Chrome .....	338
14.8.4	Assignment: Install Ghostery for Safari.....	340
14.8.5	Assignment: Install Ghostery for Chrome .....	340
14.9	Adobe Flash and Java .....	345
14.9.1	Assignment: Configure Oracle Java For Automatic Updates.....	345
14.10	Web Scams.....	349
14.10.1	Recovering From A Web Scam.....	349
14.11	Tor 352	
14.11.1	Assignment: Install Tor for Anonymous Internet Browsing.....	354
14.11.2	Assignment: Configure Tor Preferences .....	364
14.12	Onion Sites and the Deep Web .....	375
14.13	Have I Been Pwned.....	376
14.13.1	Assignment: Searching With HaveIBeenPwned .....	376
14.13.2	Assignment: What To Do Now That You Have Been Breached .	378
15	Email.....	379
15.1	The Killer App.....	380

## Contents in Detail

15.2	Phishing.....	381
15.3	Email Encryption Protocols.....	383
15.4	TLS and SSL With Mail App .....	384
15.4.1	Assignment: Configure Mail.app to Use TLS or SSL.....	384
15.5	HTTPS with Web Mail.....	389
15.5.1	Assignment: Configure Web Mail to Use HTTPS .....	389
15.6	End-To-End Secure Email With ProtonMail .....	390
15.6.1	Assignment: Create a ProtonMail Account .....	392
15.6.2	Assignment: Create and Send an Encrypted ProtonMail Email ..	396
15.6.3	Assignment: Receive and Respond to a ProtonMail Secure Email.....	400
15.7	End-To-End Secure Email With GNU Privacy Guard.....	405
15.7.1	Assignment: Install GPG and Generate a Public Key.....	406
15.7.2	Assignment: Add Other Email Addresses to a Public Key .....	412
15.7.3	Assignment: Install a Friend’s Public Key.....	418
15.7.4	Assignment: Configure GPGMail Preferences.....	420
15.7.5	Assignment: Encrypt and Sign Files with GPGServices.....	422
15.7.6	Assignment: Send a GPG-Encrypted and Signed Email .....	426
15.7.7	Assignment: Receive a GPG-Encrypted and Signed Email.....	428
15.8	End-To-End Secure Email With S/MIME.....	431
15.8.1	Assignment: Acquire a Free Class 1 S/MIME Certificate .....	432
15.8.2	Assignment: Acquire A Class 3 S/MIME Certificate for Business Use .....	439
15.8.3	Assignment: Purchase a Class 3 S/MIME Certificate for Business Use .....	448
15.8.4	Assignment: Download and Install a Business S/MIME Certificate.....	459
15.8.5	Assignment: Exchange Public Keys with Others.....	463
15.8.6	Assignment: Send S/MIME Encrypted Email.....	466
15.9	Virtru Email Encryption .....	469
15.9.1	Create a Free Virtru for Gmail Account.....	471
15.9.2	Send Encrypted Gmail With Virtru .....	477
15.9.3	Receive and Reply to a Virtru-Encrypted Email .....	479
16	Apple ID and iCloud.....	483
16.1	Apple ID and iCloud .....	484
16.1.1	Assignment: Create an Apple ID.....	485

## Contents in Detail

# **PRACTICAL PARANOIA MACOS 10.13 SECURITY ESSENTIALS**

**MARC L. MINTZ, MBA-IT, ACTC, ACSP**

## 19 Internet Activity

*If you go to a coffee shop or at the airport, and you're using open wireless, I would use a VPN service that you could subscribe for 10 bucks a month. Everything is encrypted in an encryption tunnel, so a hacker cannot tamper with your connection.*

—Kevin Mitnick<sup>1</sup>

### What You Will Learn In This Chapter

- Virtual Private Network
- Search for a VPN host
- Install and configure VPN
- Create a mesh VPN
- File share within a Hamachi VPN
- Resolve email conflicts with VPN

---

<sup>1</sup> [https://en.wikipedia.org/wiki/Kevin\\_Mitnick](https://en.wikipedia.org/wiki/Kevin_Mitnick)

## 19.1 Virtual Private Network

In case you have been sleep reading through this book, let me repeat my wake-up call: *They are watching you on the Internet. They* may be the automated governmental watchdogs (of your own or another country), government officials (again, of your own or another country), bored staff at an Internet Service Provider or broadband provider, a jealous (and slightly whackadoodle) ex, high school kids driving by your home or office or sitting on a hill several miles away, or criminals.

Regardless, your computer and data are at risk.

Perhaps one of the most important steps that can be taken to protect you is to encrypt the entire Internet experience all the way from your computer, through your broadband provider, to a point where your surfing, chat, webcam, email, etc. cannot be tracked or understood. This is accomplished using a technology called *VPN–Virtual Private Network*<sup>2</sup>.

---

<sup>2</sup> [http://en.wikipedia.org/wiki/Virtual\\_private\\_network](http://en.wikipedia.org/wiki/Virtual_private_network)

## 19.2 Gateway VPN

There are two fundamental flavors of VPN. The most common is called a *gateway VPN* (mesh VPN is discussed later.) Historically, gateway VPN involved the use of a VPN appliance resident at an organization. Telecommuting staff can use the gateway so the Internet acts like a very long Ethernet cable connecting their computer to the office network. In addition, all data traveling between the user's computer and the gateway is military-grade encrypted. The downside to this strategy is that these appliances are relatively expensive (from \$600 to several thousand dollars), and they require significant technical experience to configure correctly.

In greater detail the concept works like this:

1. Your computer has VPN software installed and configured to connect to a VPN server at the office. This server is connected to your office network. macOS/OS X comes with VPN software built into the Network System Preferences that works with many of the commercially available VPN servers, including the most popular—Cisco. Other VPN servers require their own proprietary client software to be installed.
2. On your computer, you open the VPN software and instruct it to connect to the VPN server. This typically requires entering your authentication credentials of user name and password, along with a long key.
3. The VPN server authenticates you as an allowed account and begins the connection between itself and your computer.
4. As you send data from your computer to the network connected to the VPN server (typically the regular business network), all of it is military-grade encrypted. When the data is received at the VPN server or at your computer, the VPN software decrypts it.
5. Once your data reaches the VPN server, it is then forwarded to the appropriate service on your organizations network (file server, printer, mail server, etc.)

Although this may sound a bit complex, all a user must do is enter a name, password, and key. Everything else is invisible. The only indicator that anything is

different is that speed slower than normal. This is due to the overhead of encryption/decryption process.

We can use this same strategy so that instead of securely exchanging data with our office server, we can securely surf the Internet. The workflow is just slightly different:

1. Your computer has VPN software configured to connect to a VPN server that is not associated with your office, but is just another server “on the Internet.”
2. On your computer, you open the VPN software and instruct it to connect to the VPN server. If you are using our recommended software, it is pre-configured with all the settings necessary—nothing much more to do but launch.
3. The VPN server authenticates you as an allowed account and begins the connection between itself and your computer.
4. As you surf the web, all data is military-grade encrypted. When the data is received at the VPN server or your computer, the VPN software decrypts it.
5. Once your data reaches the VPN server, it is then forwarded to the appropriate service on the Internet.

Using this strategy (a VPN Internet server), all your Internet traffic is military-grade encrypted between your computer and the VPN server. It is not possible to decipher any of your traffic (user names, passwords, data) or even the type of data coming and going.

One downside is that once the data exits the VPN server, it is readable. However, your data is intermingled with thousands of other user’s data, making the process of tweezing out your data a task that perhaps only the NSA can accomplish.

Another concern is that some VPN providers maintain user activity logs. This is law in most countries, so that government agencies can review who is doing what through the VPN. Ideally, you want to work only with a VPN provider operating in a country doesn’t require logs, and in fact, do not keep logs.

There are thousands of VPN Internet Servers available. Most of them are free. I don’t recommend using the free services for two reasons:

1. You get what you pay for (typically here today, gone tomorrow, unstable, etc.)

2. You don't know who is listening at the server side of things. Remember, your data is fully encrypted up to the server. But once the data reaches the server on the way to the Internet, it is readable. There needs to be a high degree of trust for the administration of the VPN server. I see no reason to have such trust with free services.

There are hundreds of legitimate VPN hosts. Thousands of illegitimate VPN hosts. When determining the best VPN provider for your use, there are some key variables to look for:

- **Privacy Jurisdiction.** Does the VPN host have to comply with US National Security Letters, or other governmental requirements for disclosure of your information? If you don't care about the government access to all of your Internet information, this doesn't apply. If you do care, the geographical location of the host headquarters becomes important.
- **Logs.** Are logs kept on client activities? In many countries, it is required by law that all Internet providers maintain logs of client activities. If so, although the logs may not record *what* you were doing, they keep a record of *where* you traveled. It is ideal to have a VPN provider that keeps no logs whatsoever.
- **Speed.** How fast is your Internet experience? Using VPN introduces a speed penalty due to the encryption/decryption process, as well as the need to process all incoming and outgoing packets through a server instead of point-to-point. VPN providers can reduce this penalty in several ways, including; faster servers, reducing the clients:server ratio, better algorithms, filtering content to remove advertisements and cookies, and faster server internet connections.
- **Support.** VPN adds a layer of complexity to your Internet activities. Should something not work correctly, you don't want to be the one troubleshooting. Ideally, your VPN provider has 24/7/365 chat support. Even better if they offer telephone support.
- **Cross-Platform Support.** Most of us have more than one device. Perhaps a Windows and macOS/OS X computer, an Android phone, and an Apple iPad. It would be madness to have to use a different VPN product for each of these. Look for a provider that supports all your current and potential devices.

- **Multi-Device Support.** Most, but not all, providers now offer from 3-5 concurrent device licensing. This allows your VPN service to be operational on all your devices at the same time. Providers that offer only single-device licensing may be quite costly should you have multiple devices.
- **DNS-Leak Protection.** Although VPN encrypts all data that comes and goes from your device, before you can reach out to the Internet to connect to your email, a website, or text, your device must connect to a DNS server for guidance on where to find the mail, web, or text server. If you are using your default DNS server (typically one by your Internet broadband provider, data between your system and the DNS server is not encrypted *and* is recorded. It is ideal if your VPN provider offered their own DNS servers. Using this strategy, then the data between your device and the DNS server is now either encrypted, or is not logged.
- **VPN Protocol.** There are several network protocols that may be used for encryption. We currently recommend IKEv2. This is the most current, and the only protocol with the ability to automatically activate upon accessing the Internet, and deactivate when not in use.
- **Pricing.** This is sometimes directly related to the quality of service, and occasionally directly related to the greediness of those running the business. Look for reasonable pricing for the services offered, as well as how many concurrent connections you are allowed. Some hosts allow only 1 connection. Others offer 6 or more. This would allow for you to have your computer, phone, tablet connected via VPN, as well as those of a family member.

Right about now you may be asking yourself: *If VPN is so great, why doesn't everyone know about and use it?*

Great question! As with everything else in life, there is bad that comes with the good. Each person needs to weigh the pros and cons for each situation for themselves. I personally *always* have VPN active, but I'm *always* doing work! I hope you don't have that disease. There are two primary downsides to VPN. It slows down your Internet performance. Often by 50% or more. If all I want to do were to stream Netflix to my computer, I'd turn VPN off to reduce the pauses induced by a slow Internet connection. Second, if you have selected a VPN server outside of your home country, you may have unintended consequences due to the

Internet servers thinking you are resident in that other country. For example, Google searches will be displayed in the language native to that country. This is considered a feature of the *Proxy Server* function built into VPN, and is used by those in restrictive countries to view news across the border that are normally filtered out by their home country.

### 19.2.1 Assignment: Search for a VPN Host

In this assignment, you will search for at least three VPN hosts that best meet your needs.

1. Based on the list of criteria listed above, make a list of VPN Host *must-haves*, and *prefer-to-haves*.
2. Open a web browser to <https://thatoneprivacysite.net/simple-vpn-comparison-chart/>, or for a more detailed checklist, <https://thatoneprivacysite.net/vpn-comparison-chart/>.
3. Click the *Show <pop-up menu> entries*, and then select *All*.

VPN SERVICE	PRIVACY Jurisdiction	PRIVACY Logging	PRIVACY Activism	TECHNICAL Serv Conf	TECHNICAL Security	TECHNICAL Availability	BUSINESS Website	BUSINESS Pricing	BUSINESS Ethics

- By performing a sort and sub-sort, we have filtered potential hosts from almost 200, to just a few.
- From the few hosts meeting these minimum requirements, view their websites to evaluate if any meet your needs.
- Outside of this course, you may sign-up with one or more of the hosts meeting your needs, put its service through an evaluation, unsubscribe and request a refund if they don't meet with your expectations, or keep them if they meet your needs.

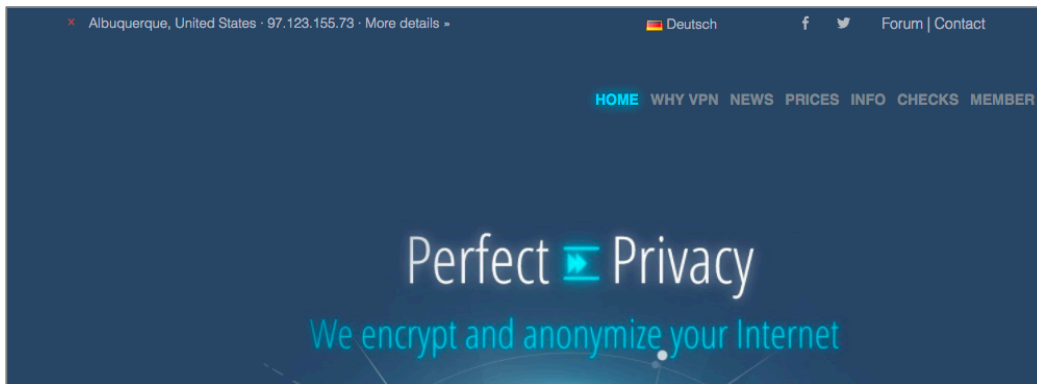

## 19.3 Perfect-Privacy

One of our favorite VPN providers is *Perfect-Privacy*<sup>3</sup>. Although they do not offer a free or trial option, they offer subscriptions as short as a month, as long as two years. With this you get servers in almost every country you can name, use on multiple devices, unlimited bandwidth, and highly responsive bandwidth. The only major complaint we have with them is that the geolocation reporting of their servers is inconsistent. For example, if you are connected to their Los Angeles, CA, USA VPN server, and then browse to <https://google.com>, it is likely that Google will see you as being located in a European country, and then reroute your browser to <https://google.ru>, displaying everything in Russian. However, if you are using DuckDuckGo for web searches, there should rarely be an issue with geolocation.

### 19.3.1 Assignment: Create a Perfect-Privacy Account

In this assignment, you create a paid account with *Practical-Privacy.com*, and then configure VPN services.

1. Open a browser, visit Perfect-Privacy at <https://perfect-privacy.com>, and then select the *Prices* button.

---

<sup>3</sup> <https://perfect-privacy.com/>

## 19 Internet Activity

2. Select the *Sign Up Now* button.

The screenshot shows the Perfect Privacy website's pricing page. The header includes the location 'Albuquerque, United States', the language 'Deutsch', and navigation links for 'Forum' and 'Contact'. The main navigation menu includes 'HOME', 'WHY VPN', 'NEWS', 'PRICES', 'INFO', 'CHECKS', and 'MEMBER'. The page title is 'Perfect Privacy' with a logo icon. The main heading is 'Features and Pricing'. Below this, there are five pricing options and a 'Sign Up Now' button. The pricing options are: 1 MONTH at € 13.49 /Month, 3 MONTH at € 11.98 /Month, 6 MONTH at € 10.99 /Month, 12 MONTH at € 10.41 /Month, and 24 MONTH at € 8.95 /Month. The 'Sign Up Now' button is highlighted in a darker blue and has a small red circle with the number '1' next to it.

Duration	Price /Month
1 MONTH	€ 13.49
3 MONTH	€ 11.98
6 MONTH	€ 10.99
12 MONTH	€ 10.41
24 MONTH	€ 8.95

**Sign Up Now**

## 19 Internet Activity

3. At the *Choose Duration* page, select your desired subscription term (the longer, the lower per month cost). Then select the *Continue* button.

The screenshot shows the Perfect Privacy website's checkout process. At the top, the navigation bar includes the location 'Albuquerque, United States · 97.123.155.73 · More details', the language 'Deutsch', and social media links for Facebook and Twitter, along with a 'Forum | Contact' link. The main header features the 'Perfect Privacy' logo and a navigation menu with links for 'HOME', 'WHY VPN', 'NEWS', 'PRICES', 'INFO', 'CHECKS', and 'MEMBER'. Below the header, a progress indicator shows four steps: 'CHOOSE DURATION' (1), 'USERNAME' (2), 'PAYMENT METHOD' (3), and 'ENJOY VPN' (4). The 'CHOOSE DURATION' step is active, displaying five radio button options: '1 Month', '3 Months', '6 Months', '12 Months', and '24 Months'. The '1 Month' option is selected. Below the options, the price is shown as '13.49 €' with the note 'one time payment'. A promotional message states 'Protect your privacy for 0.45 € per day'. Another message says 'Save more than 33 % if you buy 24 months'. To the right of the pricing information is a 3D rendering of a blue 'Perfect Privacy' product box featuring a globe and the text 'WE PROTECT YOUR INFORMATION YOUR PRIVACY'. At the bottom of the page, a blue 'continue »' button is visible.

## 19 Internet Activity

4. At the *Username* page, select *New user*, create a *Username*, enter your *e-mail address*, and then click *Continue*.

5. At the *Payment Method* page, select your desired method of payment, and then click *Buy Now*. For this assignment, I've select *PayPal*.

The screenshot shows the 'Payment Method' page on the Perfect Privacy website. The page has a dark blue header with the 'Perfect Privacy' logo and navigation links: HOME, WHY VPN, NEWS, PRICES, INFO, CHECKS, MEMBER. Below the header is a progress bar with four steps: 1. CHOOSE DURATION, 2. USERNAME, 3. PAYMENT METHOD (current step), and 4. ENJOY VPN. The main content area is white and features a 'Pay with PayPal' section. On the left, there are radio buttons for 'SECURE PAYMENTS BY Paymentwall' (selected), 'bitcoin', and 'Cash'. The 'Paymentwall' section lists logos for VISA, MasterCard, AMEX, MOBIAMO, and UnionPay. The 'Pay with PayPal' section includes the text 'Payments with PayPal are processed automatically, this usually takes just a couple of minutes.' and two radio button options: 'Subscription (may be canceled at any time)' (selected) and 'Express Checkout'. A large blue 'BUY NOW' button is centered below the payment options. At the bottom, there is a footer with contact information and a scrollable box containing 'Terms and Conditions', 'Privacy Policy', and a note: 'We try to store as little data as possible, as we can't be forced to give away something we don't have in the first place. Data we need to store:'. The browser's address bar shows 'Albuquerque, United States - 97.123.155.73 - More details -' and the language is set to 'Deutsch'.

6. Log in to PayPal.
7. At the *PayPal Payment* page, select your *Way to pay*, and then click *Continue*.

- For users of MacOS, Linux, Android und iOS there are detailed [tutorials in the Howto section](#) of our homepage.
- If you would like to join the Perfect Privacy community, please visit our [forum](#).

### 19.3.2 Assignment: Configure IKEv2 VPN With Perfect-Privacy

We recommend using the IKEv2<sup>4</sup> protocol for VPN, both for its strong encryption, and for its automatic activation when accessing the Internet.

In this assignment, you will configure a VPN connection with Perfect-Privacy using the IKEv2 protocol.

1. Open a browser to the Perfect-Privacy download section<sup>5</sup>, and then login with your username and password.
2. Scroll down to the *IPSec IKEv2* section, and then click *Show configurations for download* button.

The screenshot shows the Perfect-Privacy website interface. At the top, there is a navigation bar with the logo and menu items: HOME, WHY VPN, NEWS, PRICES, INFO, CHECKS, MEMBER, CONFIG, SERVER, DOWNLOAD, ACCOUNT, and SUPPORT. The main content area is titled "IPSec IKEv2" and lists the following features:

- OS X El Capitan required
- One-click setup

Below the list, it states: "Quick and easy setup on OS X, no additional software needed".

- Stronger encryption as manual configuration

Technical specifications are listed: "IKE SA: AES-256-GCM/SHA2-256/Diffie-Hellmann Group 18" and "Child SA: AES-256-GCM/SHA2-256".

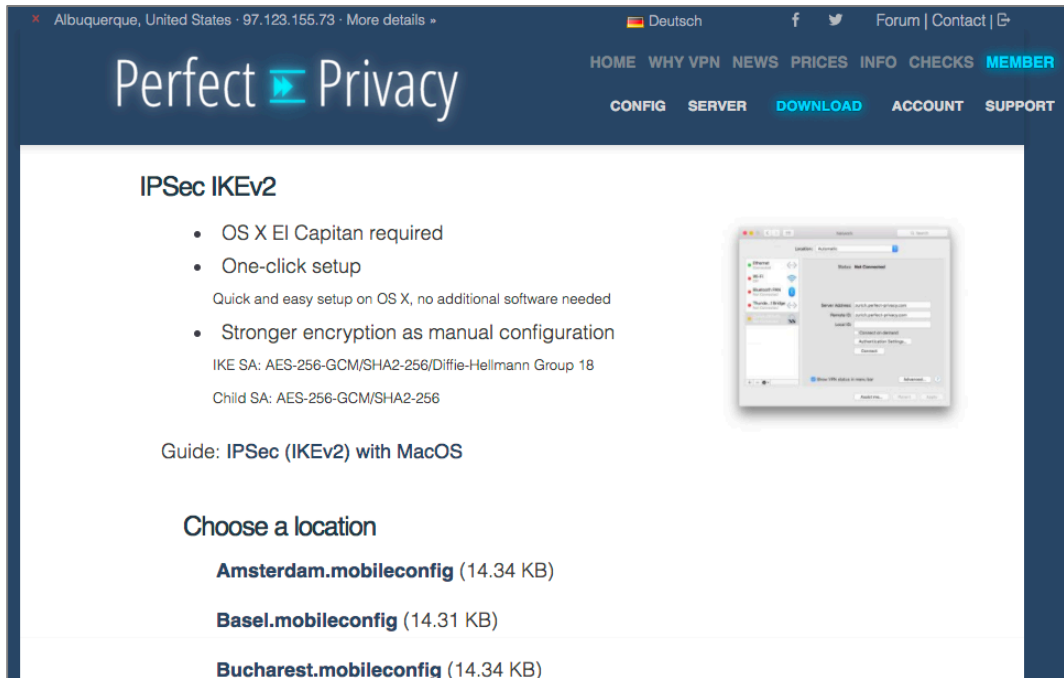

A guide link is provided: "Guide: IPSec (IKEv2) with MacOS".

A blue button at the bottom of the section reads "Show configurations for download". To the right of the text is a small image of a Mac OS X system preferences window showing VPN settings.

<sup>4</sup> [https://en.wikipedia.org/wiki/Internet\\_Key\\_Exchange](https://en.wikipedia.org/wiki/Internet_Key_Exchange)

<sup>5</sup> <https://www.perfect-privacy.com/member/download/>

3. Select the location configuration profile to download. For this example, select *LosAngeles.mobileconfig*.

### Choose a location

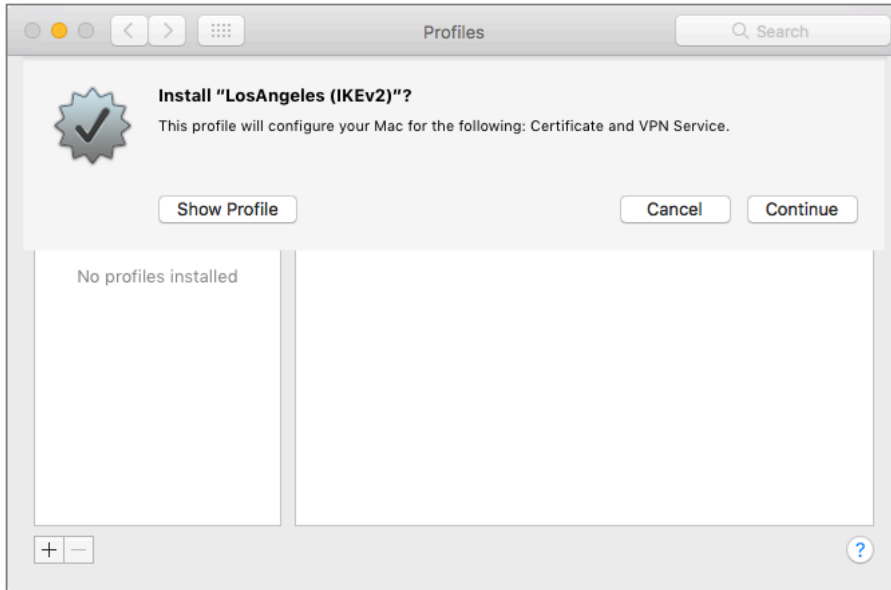

- [Amsterdam.mobileconfig](#) (14.34 KB)
- [Basel.mobileconfig](#) (14.31 KB)
- [Bucharest.mobileconfig](#) (14.34 KB)

4. Double-click the downloaded profile *LosAngeles.mobileconfig*.

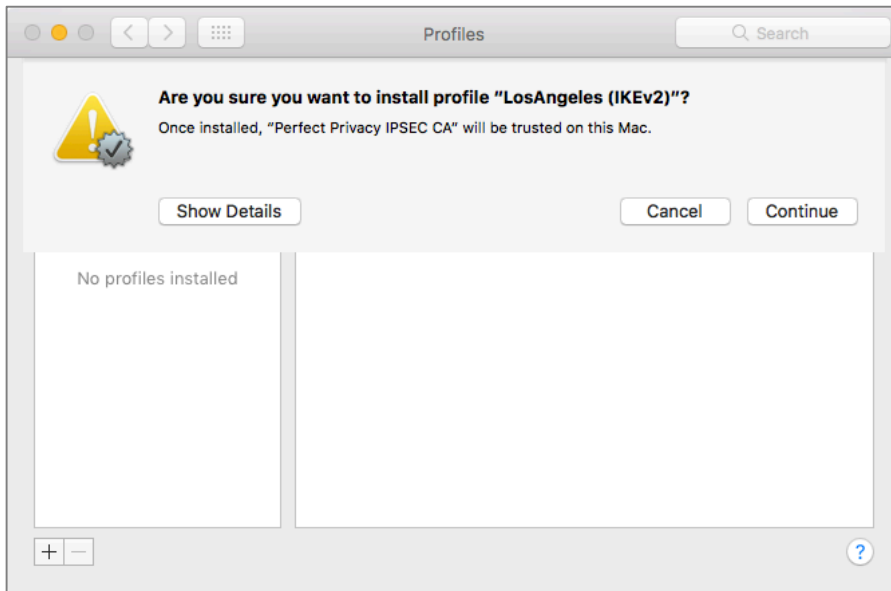

## 19 Internet Activity

5. The profile installer will launch. Select the *Continue* button.

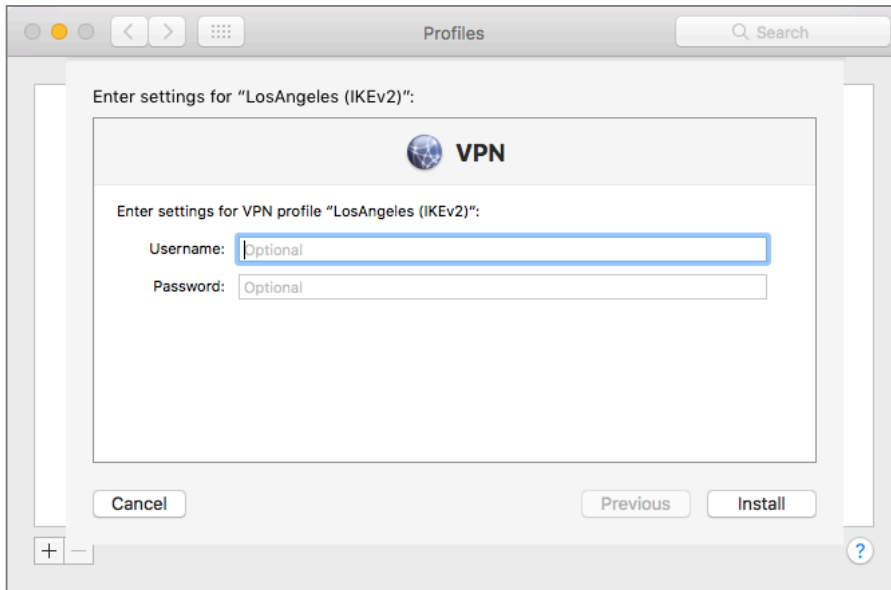

6. At the confirmation window, select *Continue*.

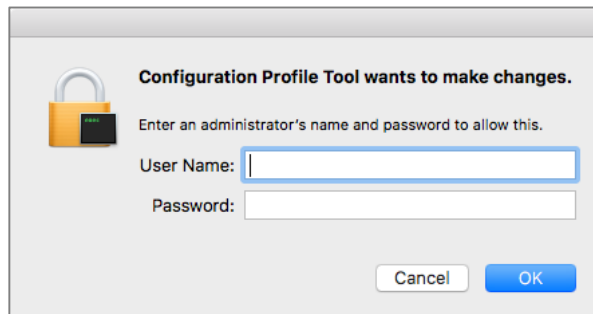

## 19 Internet Activity

7. In the *Enter Settings for <profile name>* window, enter your *Perfect-Privacy Username* and *Password*, and then click *Install*.

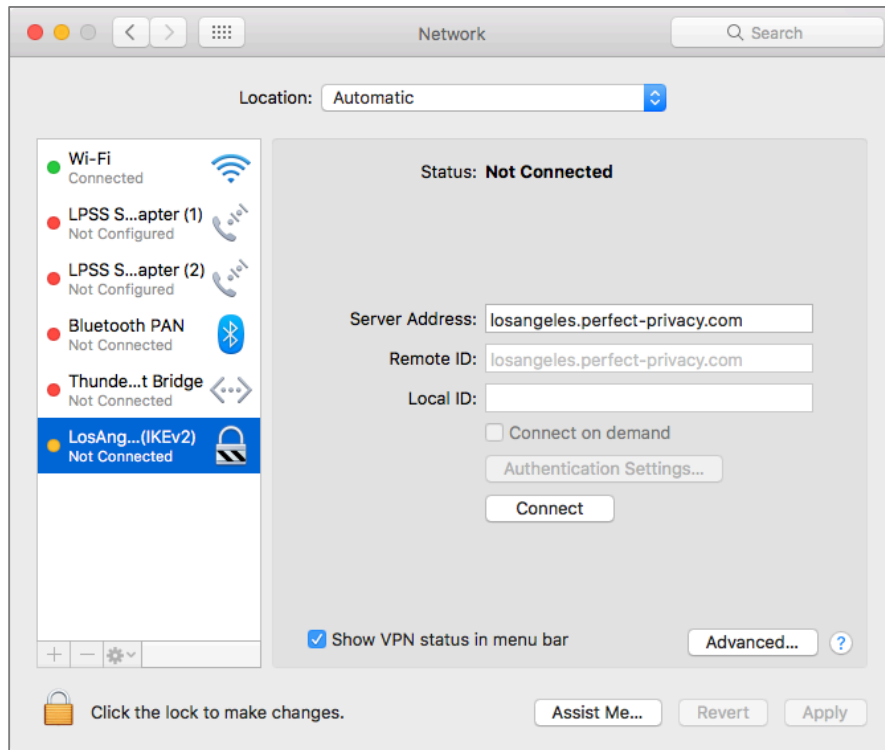

8. At the authorization window, enter an administrator *User Name* and *Password*.

## 19 Internet Activity

9. The location profile will install.

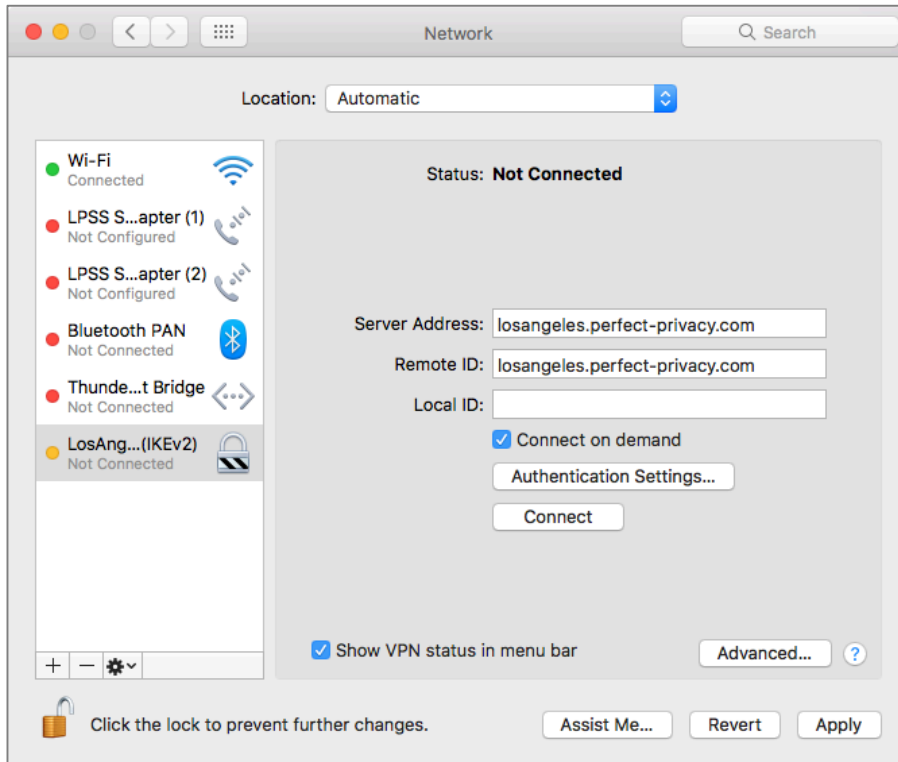

10. Open *System Preferences* > *Network*. You will see the profile listed.

11. Unlock *System Preferences*.

## 19 Internet Activity

12. Enable *Connect on demand*, enable *Show VPN status in menu bar*, click *Apply*, and then close System Preferences. With this enabled, whenever you connect to the Internet, the profile will automatically launch, creating a VPN connection with your VPN server.

13. A new icon may be found in your menu bar, reporting your connection status.

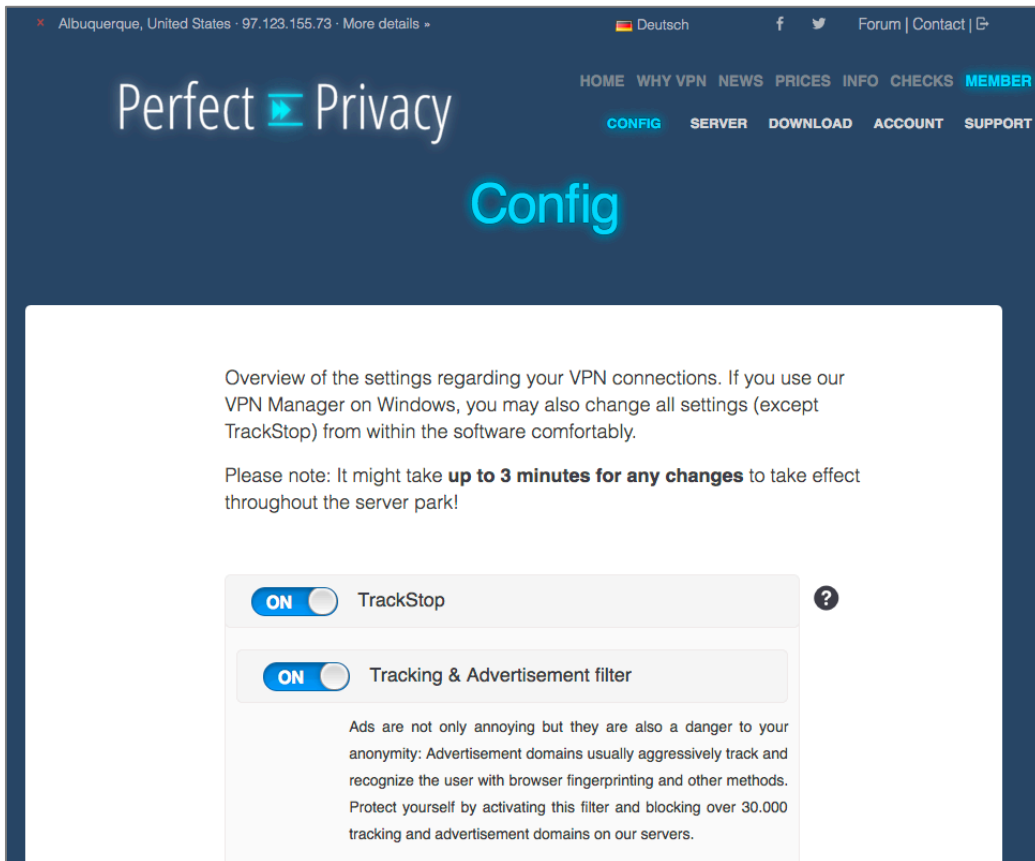

### 19.3.3 Assignment: Advanced Perfect-Privacy Settings

Most quality VPN hosts provide for advanced account configuration. Perfect-Privacy offers several unique options.

In this assignment, you will configure your advanced Perfect-Privacy settings.

## 19 Internet Activity

1. Open a browser to the Perfect-Privacy configuration page<sup>6</sup>. If you receive an authentication prompt, enter your Perfect-Privacy *Username* and *Password*.
2. Read each of the options, and then configure to your taste. Listed below are my settings.

<sup>6</sup> <https://www.perfect-privacy.com/member/config/>

## 19 Internet Activity

**ON** Fraud filter

Browser-induced malware is getting a bigger problem every day. Antivirus software and browser plugins can only protect against known attacks and malware. Activate this filter to block over 45.000 known malware domains and protect yourself from a majority of these attacks. Additionally about 20.000 phishing domains collected and maintained at <https://phishtank.com> are also blocked. Activating this block list can protect from phishing attacks and is recommended for security reasons.

**ON** Fake News filter

Block list with known fake news domains using a publicly available filter list hosted on GitHub to which anyone can contribute.

**OFF** Facebook filter

Facebook is notorious for tracking users and collecting as much data as possible from them. This not only affects Facebook users but anyone who is visiting websites that show a Like-Button or other content from Facebook. If you do not use Facebook and do not want to see any Facebook content for anonymity reasons, you can activate this filter and block all Facebook domains.

## 19 Internet Activity

OFF Google filter

**Warning: This blocks all Google domains, including Youtube, ReCaptcha and other services from Google used on many websites!** Internet without Google, does that even work? You can find out by activating this Filter. Much like Facebook, the data leech Google is known for collecting as much user data as possible. But many other websites are also using Google resources. Activating this filter will block all ~400 Google domains. For the daily internet activity this is probably not very useful, since many websites will be constricted in functionality. But if you ever wanted to find out how much you and the internet rely on Google, you can temporarily turn on this filter.

OFF Social Media filter

Not only Facebook and Google are collecting data, generally all social media platforms have this irritating characteristic. If you do not use social media and generally do not want to see such content, you can activate this filter and block all large and known social media sites. Among them are Facebook, Twitter, Tumblr, Instagram, Google+, Pinterest, MySpace and LinkedIn.

ON Use random exit IP address ?

OFF Default port forwarding ?

OFF Use custom port forwarding ?

Done!

## 19.4 Mesh VPN

Another way in which VPN can be configured is a *mesh VPN*. This strategy places multiple computers within the same virtual network regardless of where they are geographically located on the Internet. All the computers operate as if they are on the same physical network, and all traffic between each of the computers is military-grade encrypted. Mesh VPN is ideal for groups of people to exchange files, screen share, and access databases from each other, while maintaining full privacy from the outside world.

We now have software that enables mesh networks for a trivial cost. Keep in mind that VPN is only as secure as the provider, and the vendor of choice is a US company, subject to US federal laws and National Security Letters giving the NSA full access to logs and data crossing the vendor servers.

## 19.5 LogMeIn Hamachi

LogMeIn<sup>7</sup> is a US-based company with a line of top-grade cloud services. They are best known for their *LogMeIn* remote support software, allowing technical support staff both attended and unattended access to client and server computers.

One of their lesser-known, but game-changing products is *Hamachi*<sup>8</sup>. Hamachi is a cloud-based VPN, eliminating the need for expensive VPN boxes. As if that weren't enough, it also allows for three different types of VPN configurations: Gateway, mesh, and hub & spoke. We will restrict discussion here to the mesh option.

As of this writing, Hamachi is free for use with 5 or fewer nodes (computers). Up to 32 nodes on one network is available for \$29/year. Up to 256 nodes on a network is available for \$119/year.

### 19.5.1 Assignment: Create a LogMeIn Hamachi Account

In this assignment, you create a LogMeIn Hamachi account, so that you can deploy a free Hamachi network for up to 5 computers. Should you eventually need more computers on the network, your account can easily be upgraded at any time.

---

<sup>7</sup> <https://logmein.com>

<sup>8</sup> <https://secure.logmein.com/products/hamachi/>

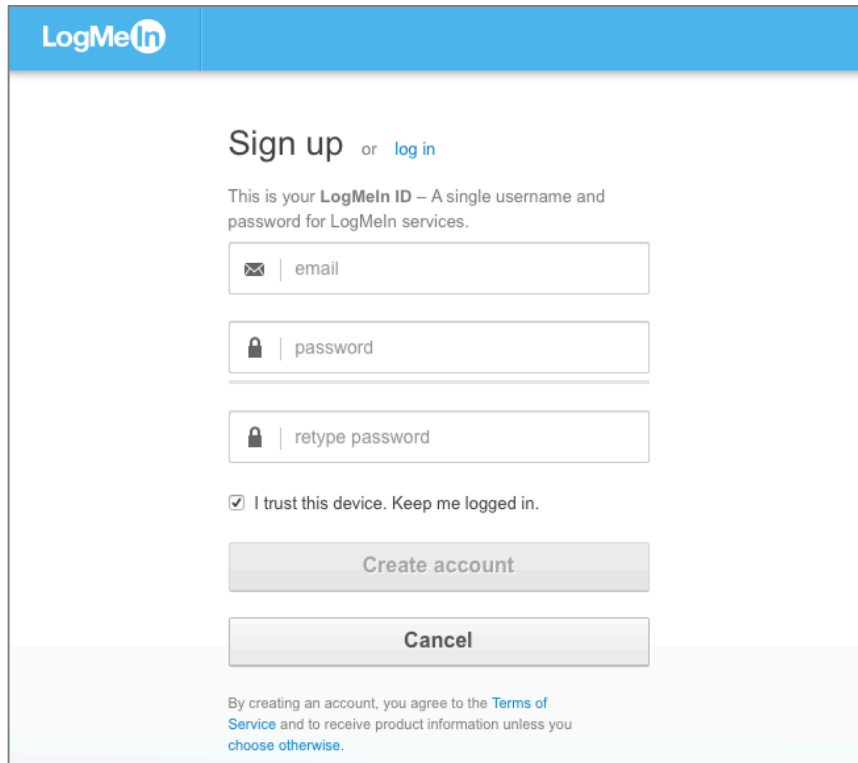

## 19 Internet Activity

1. Open a browser, and go to the Hamachi home page at <https://secure.logmein.com/products/hamachi/default.aspx>. The Hamachi home page opens. Click the *Sign up* link.

## 19 Internet Activity

2. Select the *Try it Free* button. In the *Sign Up* field, enter all requested information, and then select the *Create Account* button.

The screenshot shows the LogMeIn sign-up interface. At the top left is the LogMeIn logo. The main heading is "Sign up or log in". Below this is a sub-heading: "This is your LogMeIn ID – A single username and password for LogMeIn services." There are three input fields: "email" (with an envelope icon), "password" (with a lock icon), and "retype password" (with a lock icon). A checkbox is checked with the text "I trust this device. Keep me logged in." Below the fields are two buttons: "Create account" and "Cancel". At the bottom, there is a disclaimer: "By creating an account, you agree to the Terms of Service and to receive product information unless you choose otherwise."

3. In the *Complete Your Registration* page, enter all requested information, and then select the *Register* button.

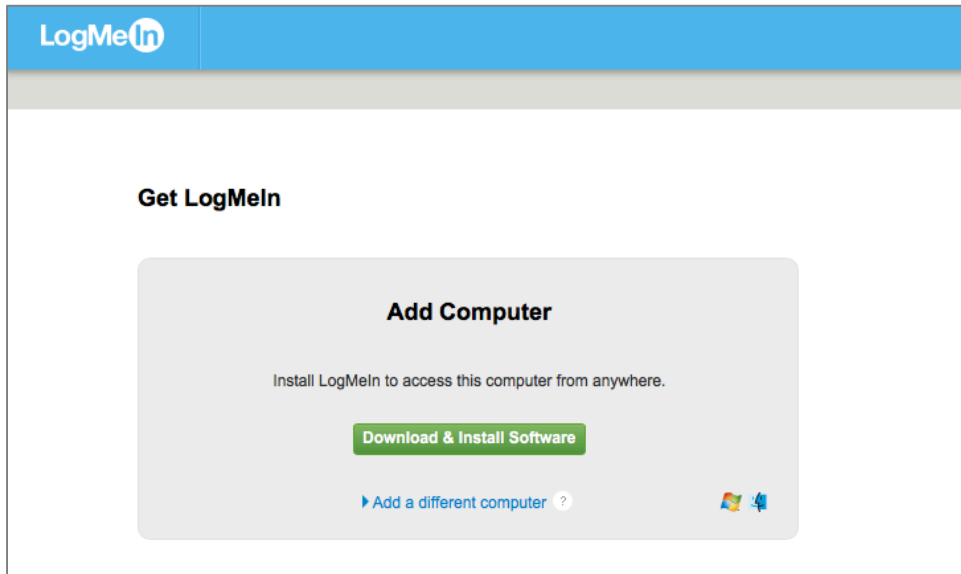

LogMeIn

## Complete your registration

[Register](#) [Skip](#)

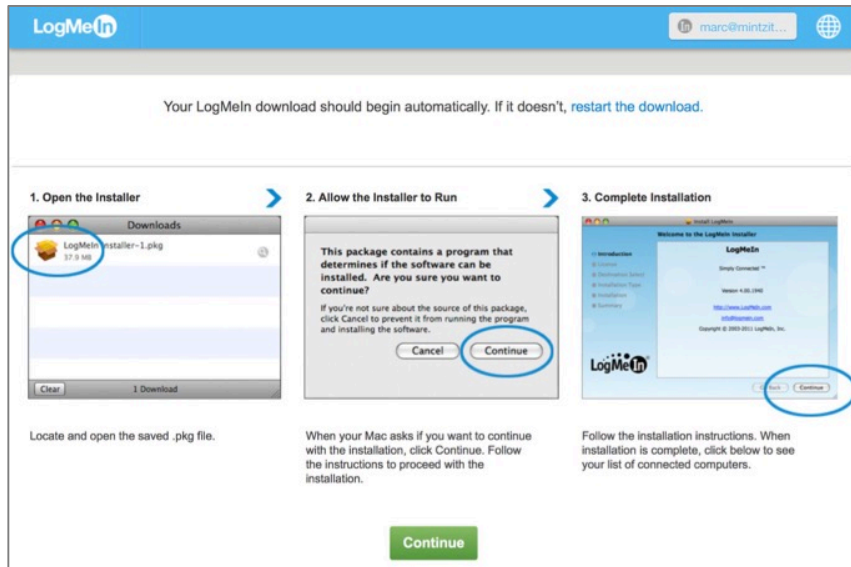

## 19 Internet Activity

4. At the *Get LogMeIn* page, select the *Download and Install Software* button to install the software on this computer. If you don't need the software on this computer, but want to install on other computers, click the *Add a different computer link*, and then follow the on-screen instructions.

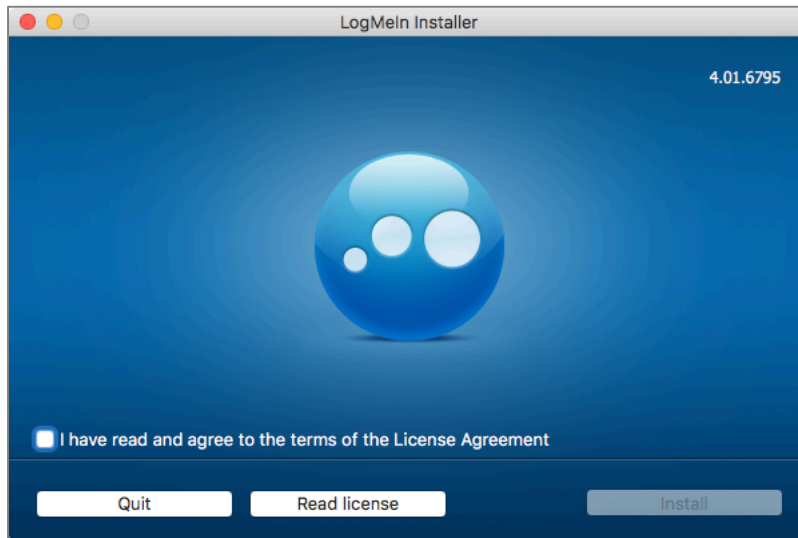

## 19 Internet Activity

- The software will begin to download, and the guide page will appear. **Do not** select the *Continue* button quite yet.

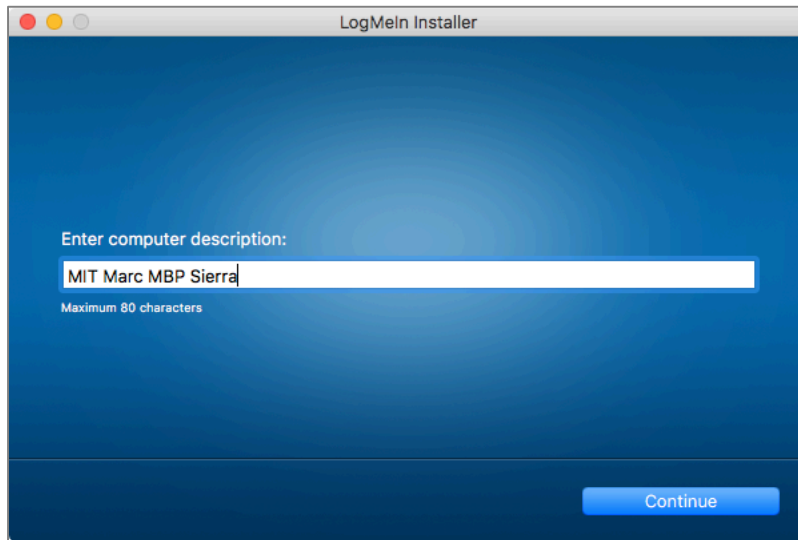

- Go to your Downloads folder, and open the *LogMeIn Installer.app*. Enable the *I have read and agree...* checkbox, and then select the *Install* button.

## 19 Internet Activity

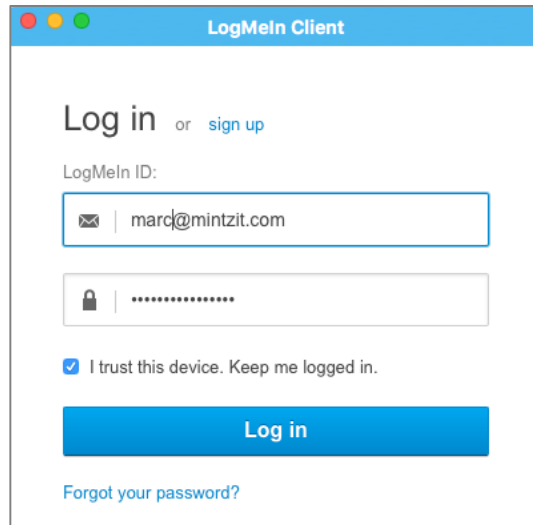

7. At the authentication prompt, enter an administrator username and password, and then select the *Install* button.
8. At the prompt, enter a name for your computer, and then select the *Continue* button.

9. At The *Installation Was Successful* pane, select the *Finish* button.

## 19 Internet Activity

10. The *LogMeIn Client Log In* window appears. Enter the same email and password used to create the account, and then select the *Log In* button.

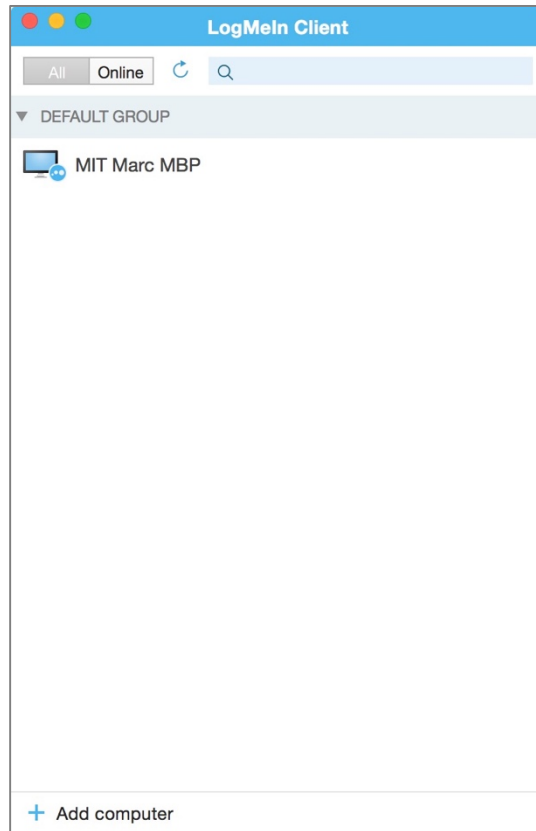

The screenshot shows a window titled "LogMeIn Client" with a blue header bar. Below the header, the text "Log in" is displayed in a large font, followed by "or [sign up](#)". Underneath, the label "LogMeIn ID:" is positioned above a text input field. The input field contains an email icon, a vertical separator, and the text "marc@mintzit.com". Below this is a password input field with a lock icon, a vertical separator, and a series of dots representing the password. A checkbox is checked, with the text "I trust this device. Keep me logged in." to its right. At the bottom of the form is a large blue button with the text "Log in". Below the button is a link that says "Forgot your password?".

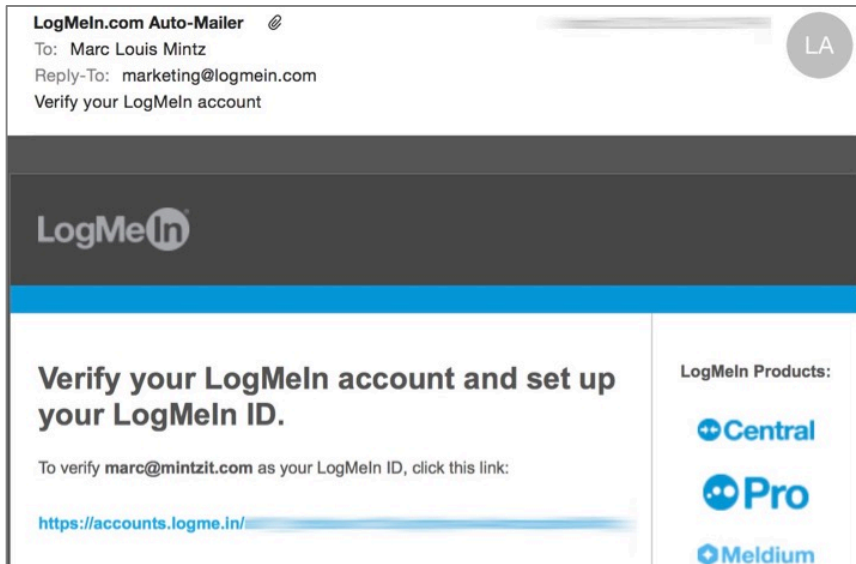

## 19 Internet Activity

11. The *LogMeIn Client* window will now display all users who are members of this network (currently, just yourself.) To add additional users, skip to step 13.

## 19 Internet Activity

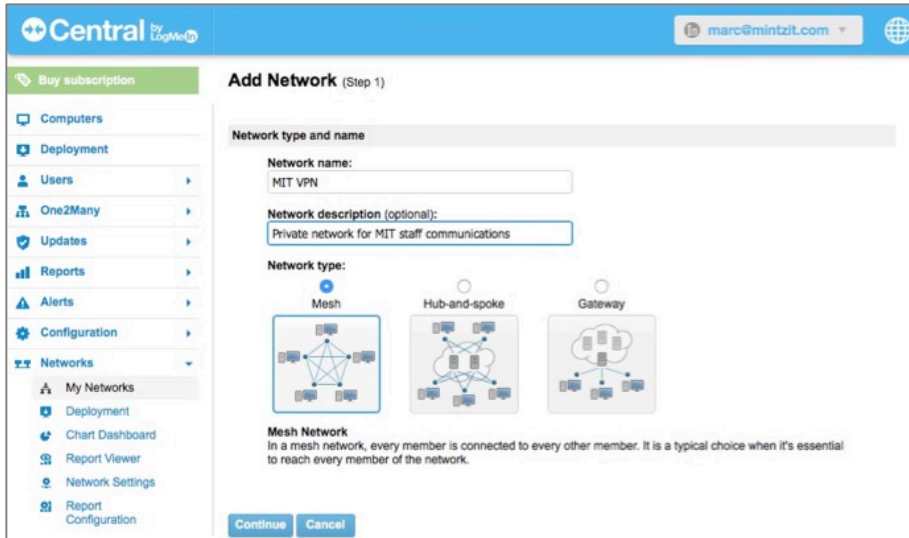

12. Open your email to check for a verification message from LogMeIn. Click the reply link.

13. Returning to your browser, in the *Hamachi* screen, select *Networks* > *My Networks*, and then select *Create Networks*.

The screenshot displays the LogMeIn Central web interface. The top navigation bar includes the 'Central by LogMeIn' logo, a user profile dropdown for 'marc@mintzit.com', and a globe icon. A left-hand sidebar contains a menu with categories: 'Buy subscription', 'Computers', 'Deployment', 'Users', 'One2Many', 'Updates', 'Reports', 'Alerts', 'Configuration', and 'Networks'. Under 'Networks', the sub-menu items are 'My Networks', 'Deployment', 'Chart Dashboard', 'Report Viewer', 'Network Settings', and 'Report Configuration'. The main content area features a yellow 'Planned System Maintenance' banner with details for Saturday, April 18th 2015. Below this is a section titled 'Get Started Now with On-Demand VPN Connectivity' with a descriptive paragraph. Three main action cards are visible: 'Deploy Hamachi', 'Create Networks' (highlighted with a red border), and 'Add Clients'. Each card includes a diagram and a brief description. At the bottom, there is a 'Buy Hamachi Subscriptions' button and social media links for Facebook, LinkedIn, and a 'Community' link.

14. In the *Add Network* page, in the *Network Name* field, give your network a human-readable name, select the *Network Type* (in this example, we are creating a *Mesh* network), and then select the *Continue* button.

15. In *Add Network (Step 2)*, in *Join Requests*:

- In *Join Requests*, specify how users will be able to join the VPN network. If security is a concern, we recommend *Must be approved* to keep strangers out.
- In *Network password*, configure if a password is required to join the network. Assuming all user computers have strong passwords, and full-disk encryption, it would be extremely unlikely anyone other than the authorized user would be attempting network connection. However, if security is a concern, enable the password requirement, and then set a strong password.
- In *Subscription*, specify what subscription level is requested. For the purposes of this assignment, select *Multi-network via Control (up to 5 members, any number of networks.)*

## 19 Internet Activity

16. Select the *Continue* button.

The screenshot shows the 'Add Network' (Step 2) interface in the Central by LogMeIn web application. The left sidebar contains navigation options: Buy subscription, Computers, Deployment, Users, One2Many, Updates, Reports, Alerts, Configuration, Networks (expanded to show My Networks, Deployment, Chart Dashboard, Report Viewer, Network Settings, Report Configuration), Backup, and Bulletin Board. The main content area is titled 'Add Network (Step 2)' and includes the following sections:

- Join Requests:** Radio buttons for 'Accept automatically', 'Must be approved' (selected), and 'Members can be added on the web only'.
- Network password:** A checkbox for 'A password is required to join this network'. Below are input fields for 'Network password' and 'Confirm password'. A note states: 'Clients requesting to join the network must enter the password. If you do not set a password, we recommend setting the Join Request behavior to Must be approved or Members can be added on the web only.'
- Subscription:** Radio buttons for 'Multi-network via Central (up to 5 members, any number of networks)' (selected), 'Buy Standard (up to 32 members per network) - \$29.00/year', 'Buy Premium (up to 256 members per network) - \$119.00/year', and 'Buy Multi-network (up to 256 members, any number of networks) - \$199.00/year'.

At the bottom of the main content area are 'Continue' and 'Cancel' buttons.

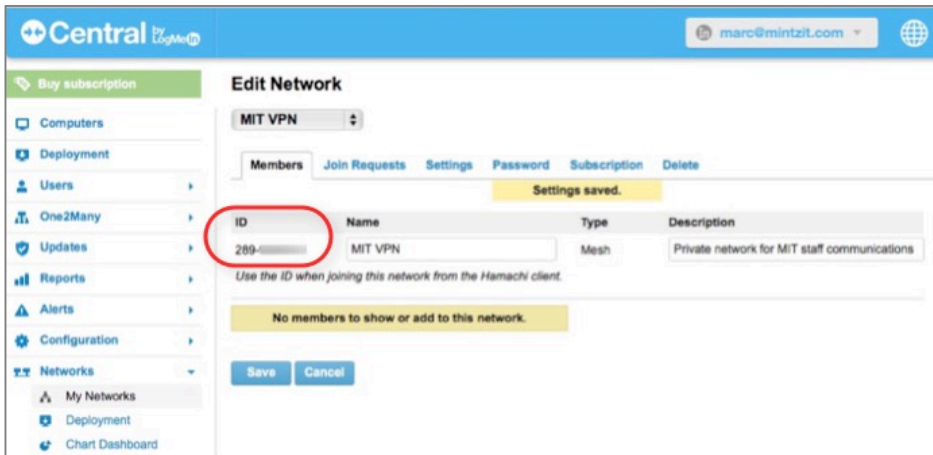

17. The *Add Network (Step 3)* appears. Select the *Finish* button.

The screenshot shows the 'Add Network' (Step 3) interface in the Central by LogMeIn web application. The left sidebar is identical to the previous screenshot. The main content area is titled 'Add Network (Step 3)' and includes the following sections:

- Network: MIT VPN:** A network diagram showing a central server connected to several client computers. Text reads: 'Select computers to join this network. Clients from other accounts can also request to join this network from the client interface. Read more'.
- Select network members:** A yellow box with the text 'No eligible members to list.'
- Continue to Add Client:** A button with a plus icon.

At the bottom of the main content area are 'Finish' and 'Cancel' buttons.

18. In the *Edit Network* page, make note of your network ID, as this will be used when joining the network. Select the *Save* button.

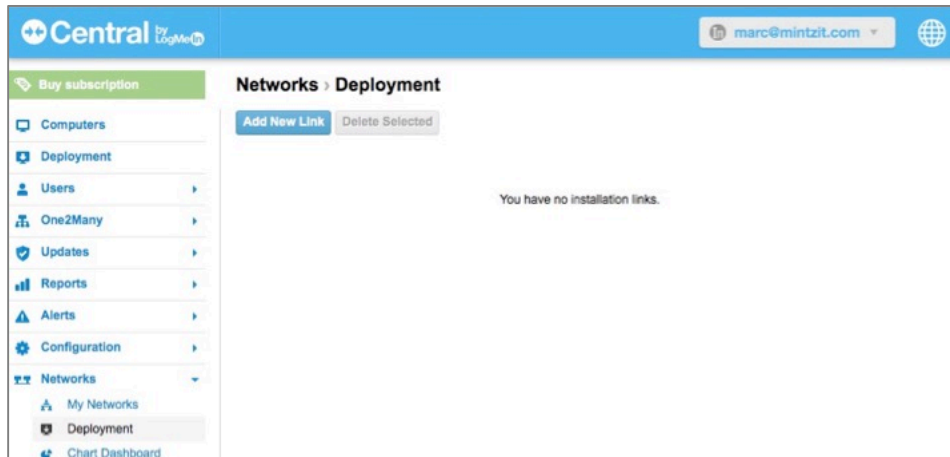

Congratulations, your account is created and you are ready to add users to your mesh VPN network.

### 19.5.2 Assignment: Add Users to a Hamachi VPN Network

In this assignment, you add users to the Hamachi VPN network created in the previous assignment.

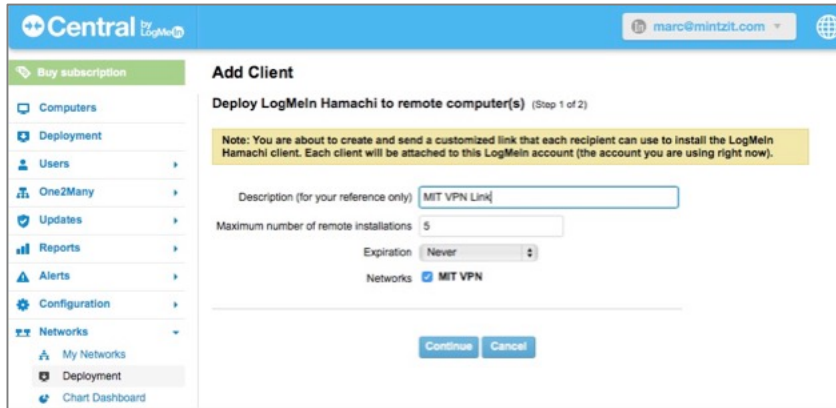

- Prerequisite: Completion of the previous assignment.
1. Open a browser and go to <https://secure.logmein.com>, and then login with your username and password. The *LogMeIn Central* page appears.

2. Select the *Networks > Deployment* link, and then select the *Add New Link* button.

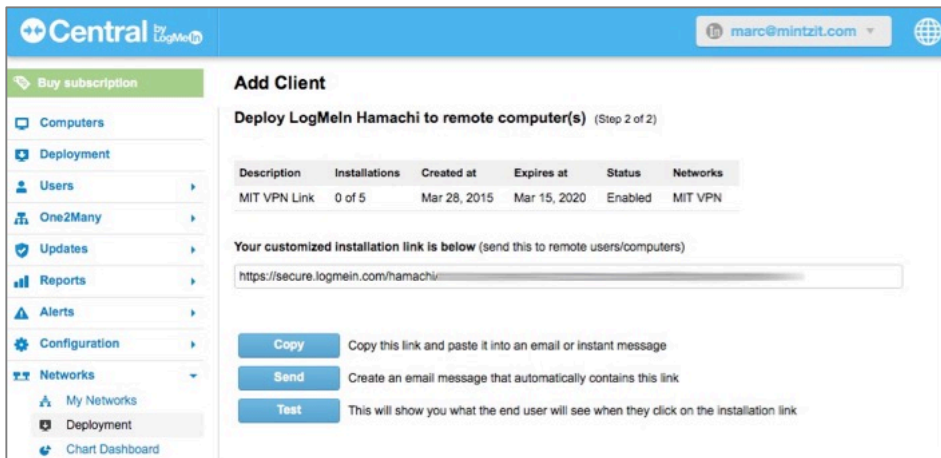

3. In the *Add Client* page, you will create a link that can be used to allow a custom installation of Hamachi.
  - In the *Description* field, enter information for your own reference.
  - In the *Maximum number of remote installations* field, enter, well, the maximum number of installations permitted (with a free account, this is 5.)
  - In the *Expiration* pop-up, specify when the link expires.
  - In *Networks*, enable the checkbox for the network this link will be used.

4. Select the *Continue* button.

5. The *Add Client* link page appears. You have the option to *Copy* or *Send* the link. For our assignment, select *Send*.

The default email client will open, with the link pre-entered in the body area, awaiting entry of recipient(s) and a message.

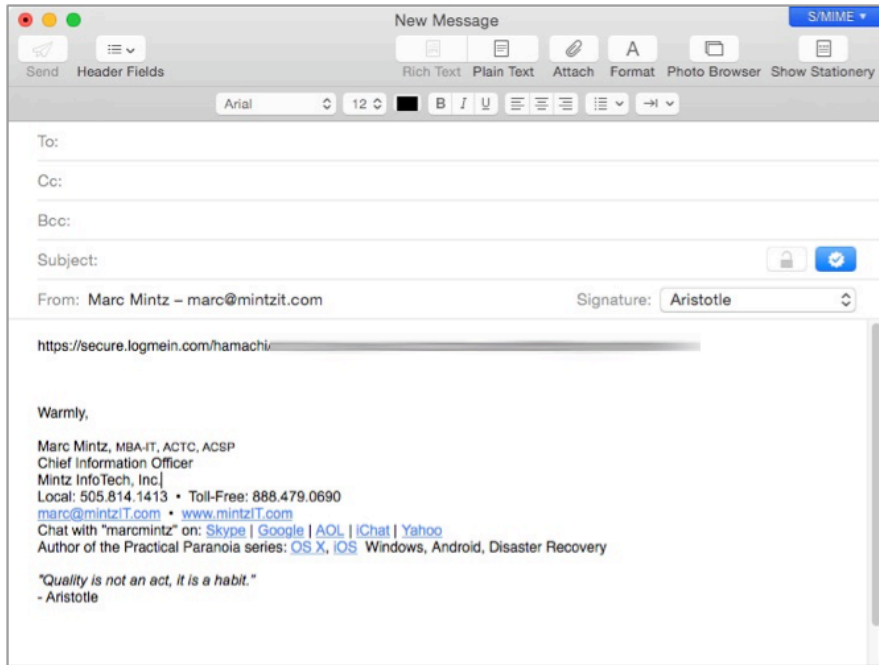

6. Enter recipient address(es).
7. Enter a subject.
8. Enter additional information in the body area explaining what to do next. Something like: *Listed below is a link to download LogMeIn Hamachi. This*

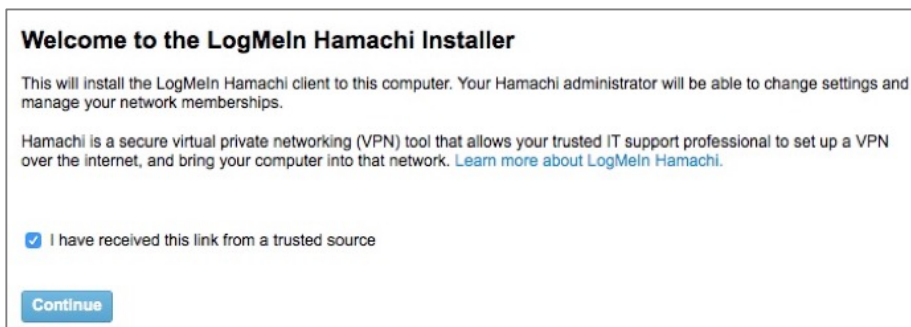

## 19 Internet Activity

*software will allow all of us to create a private encrypted network within which we may continue our plans for world domination.*

9. Send the email.

10. When the recipient clicks the link, they are taken to the *Hamachi Installer* page. Enable the *I have received this link from a trusted source* check box, and then select the *Continue* button.

11. At the *Download* page, select the *Download Now* button.

12. The *LogMeIn Hamachi Installer* will download. Once complete, launch the installer, enable the *I have read...* check box, and then select the *Install* button.

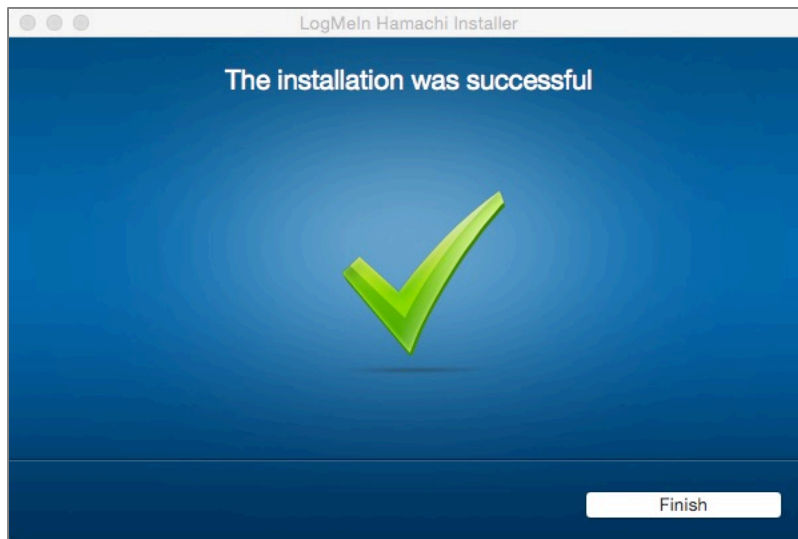

## 19 Internet Activity

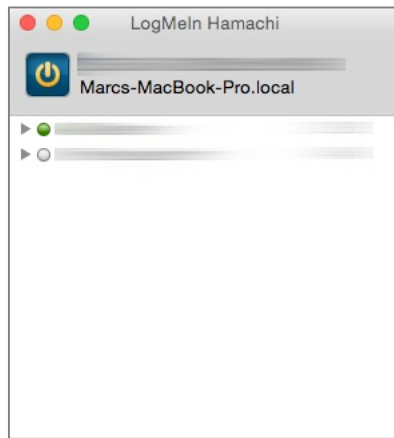

13. The *Attach client to LogMeIn account* screen appears. Select the *Next* button.

14. When the installation completes, select the *Finish* button.

15. Open *LogMeIn Hamachi*.app, located in */Applications/LogMeIn Hamachi*. In my case, there are networks that I currently belong to listed, one of which I am connected (the green button), and one I am not connected with (white button). Neither of which is the MIT VPN network (yet).
- If your target network appears in the *LogMeIn Hamachi* window with a green button, all is done!
  - If your target network doesn't appear in the *LogMeIn Hamachi* window, we have a few more steps to complete.

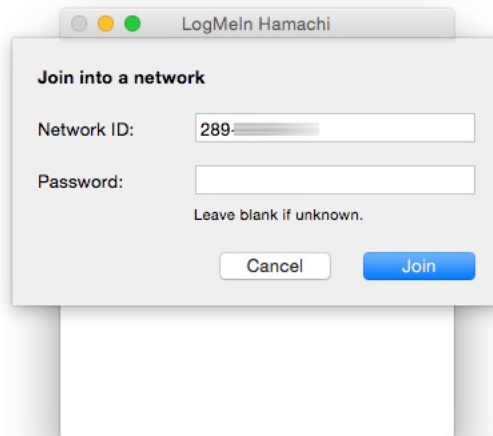

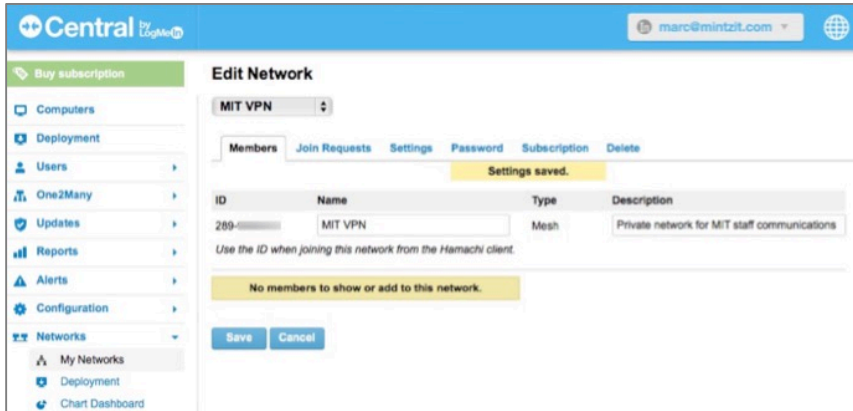

16. In LogMeIn Hamachi select *Network* menu > *Join an existing network...*

## 19 Internet Activity

17. Enter the *Network ID* as displayed in step 18 of the previous exercise, and then select the *Join* button.

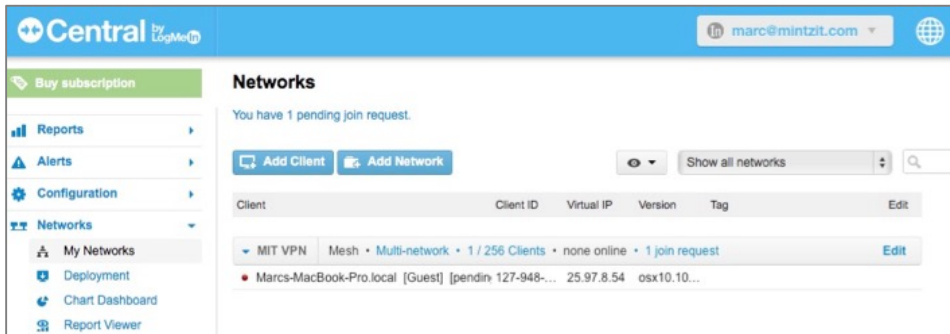

18. At the dialog box asking *Would you like to submit a request for membership?* Select the *Yes* button.

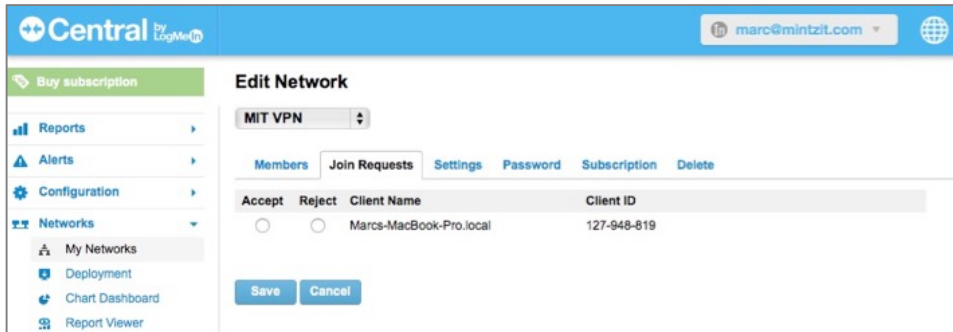

## 19 Internet Activity

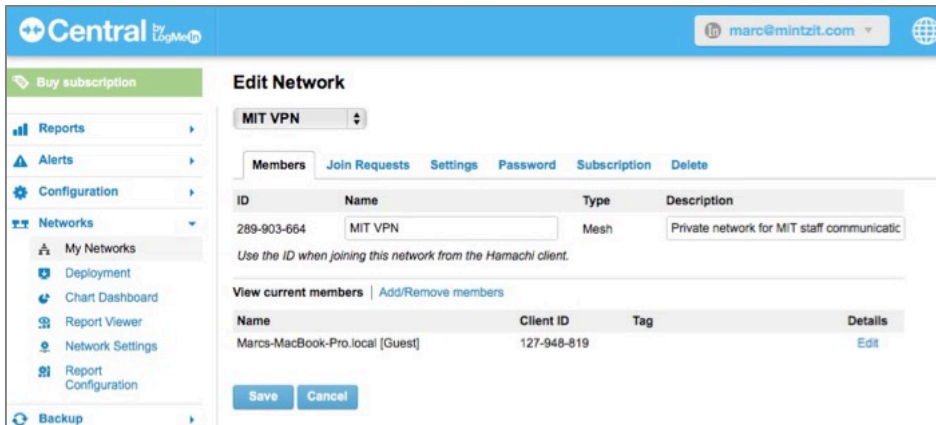

19. Back at your computer, or the computer used to administer this network, in the *LogMeIn Central* page > *Networks* > *My Networks* will be found all the users who have received and responded to their links from the previous steps. Select the *Edit* link.

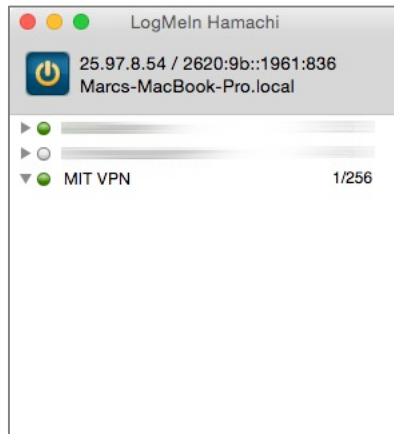

20. In the *Edit Network* page, select *Join Requests*. If the pending join request is from someone who should join the network, select the *Accept* radio button. If they are someone who should not join the network, select the *Reject* radio button, and then select the *Save* button.

21. In the *LogMeIn Central* page > *Networks* > *My Networks* > *Members* you will see that this user is now part of the group.

22. Returning to the user who has just been accepted into the group, their Hamachi window will now reflect they are part of the network (the network appears in the window) and that they are actively joined to the network (green button next to the network name.)

*Awesome!* You have your first member of the VPN network. Of course, you can't do anything with just one person. The value of VPN comes with additional members. Repeat the steps in this assignment to have at least one more computer part of your network, and then move on to the next assignment.

### 19.5.3 Assignment: File Sharing Within a Hamachi VPN Network

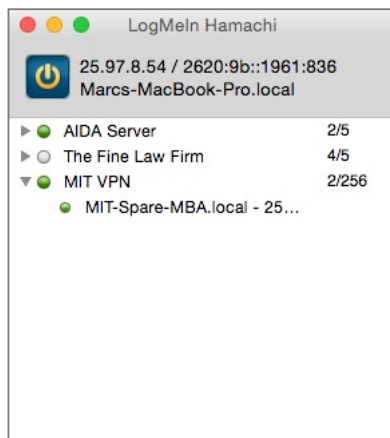

In this assignment, you file share within a Hamachi VPN network.

- Prerequisite: Completion of the previous assignment.

In the typical macOS network environment, one Mac can see another Mac over the network using an automatic discovery protocol, *Bonjour*. This protocol isn't in effect over a VPN connection, so we will need a different method of accessing other computers for file sharing and other network activities.

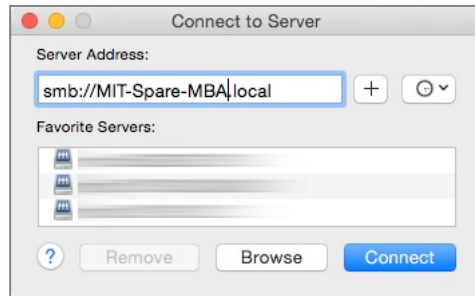

Before we begin, please make sure the other computer has *System Preferences > Sharing > File Sharing* enabled, that SMB file sharing is enabled, and that you know a username/password allowed to file share.

1. Launch *Hamachi*, and verify the target computer is showing as *Online*. In this example, the other computer is named *MIT-Spare-MBA.local*.

2. On your macOS/OS X computer, in the *Finder*, select the *Go* menu > *Connect to Server*. Enter *afp://<name of computer>* (to create an *Apple Filing Protocol* connection), or *smb://<name of computer>* (to create a *Server Message Block* connection) and then select the *Connect* button.
  - Although AFP<sup>9</sup> is the legacy standard of communication between Apple computers. As of OS X 10.10, Apple is moving away from it in favor of SMB, the long-time Windows standard. SMB<sup>10</sup> is the preferred protocol for macOS. You will likely have faster network throughput using SMB.

3. When the *Authentication* window appears, select *Registered User*, and then enter your authorized *Name* and *Password*, and then select the *Connect* button.

<sup>9</sup> [https://en.wikipedia.org/wiki/Apple\\_Filing\\_Protocol](https://en.wikipedia.org/wiki/Apple_Filing_Protocol)

<sup>10</sup> [https://en.wikipedia.org/wiki/Server\\_Message\\_Block](https://en.wikipedia.org/wiki/Server_Message_Block)

## 19 Internet Activity

4. The available volumes (sharepoints) will appear. Select the desired volume, and then select the *OK* button.

5. The volume will mount to your desktop. Double-click to open and navigate it just as if it were located on your physical network.
6. To file share, all you need do is drag and drop between your computer drives and the mounted volume.
7. When you are ready to disconnect from the remote computer, drag the mounted volume into the *Eject* Dock icon.

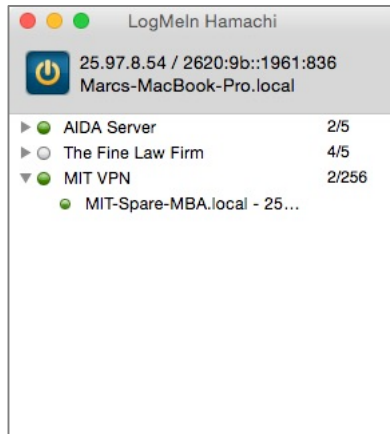

### 19.5.4 Assignment: Screen Share Within Hamachi VPN

In this assignment, you screen share within the Hamachi VPN environment. If you have followed the previous assignment, then screen sharing is almost identical to file sharing.

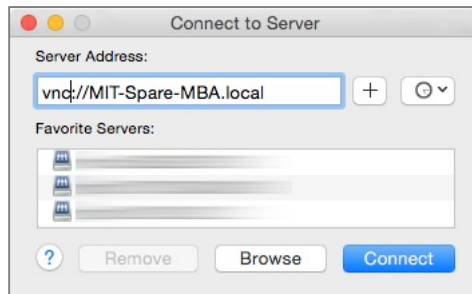

Before we begin, please make sure the other computer has *System Preferences > Sharing > Screen Sharing* enabled, and that you know a username/password allowed to screen share.

## 19 Internet Activity

1. Launch *Hamachi*, and verify the target computer is showing as *Online*. In this example, the other computer is named *MIT-Spare-MBA.local*.

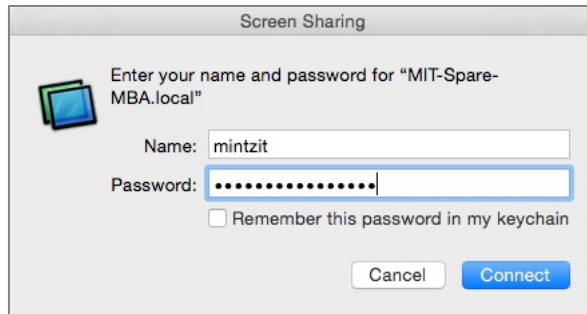

2. On your macOS/OS X computer, in the *Finder*, select the *Go* menu > *Connect to Server*. Enter *vnc://<name of computer>* (to create a *Virtual Network Control* connection), and then select the *Connect* button.

## 19 Internet Activity

3. At the authentication prompt, enter the authorized *Name* and *Password*, and then select the *Connect* button.

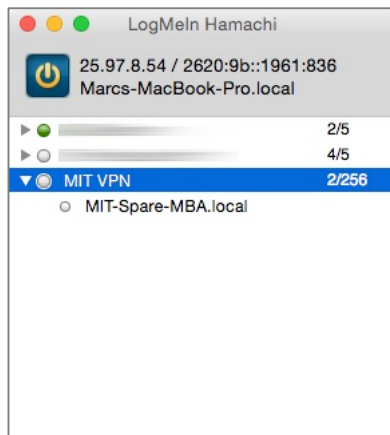

4. The screen of the remote computer will appear. You will be able to control it with your mouse and keyboard.
5. To exit out of screen sharing, close the *screen sharing* window.

### 19.5.5 Assignment: Exit the Hamachi VPN Network

In this assignment, you stop VPN so that you are no longer connected to the VPN network.

1. On your computer, in the Hamachi window, right-click on the connected network name, and then select *Go Offline* menu. The network button will turn from green to white, indicating you are no longer connected.

2. You may now *Quit* LogMeIn Hamachi.

Great work! You can now create a military-grade, encrypted network, on the fly, so that your friends or business associates can share files, screen share, etc. without fear of data or activities being spied upon.

## 19.6 Resolving Email Conflicts with VPN

Some email servers will send up a red flag and then block user access to email when the user switches to a VPN connection. This is a good thing as it indicates the email provider is highly sensitive to any possible security breach. In all cases there is a resolution available, although the steps to take will vary with each provider.

As an example, I have outlined below what occurs when using VPN with a Gmail account, and how to gain access to your email after the blockage.

1. The user starts a VPN program to encrypt all data between the user's computer and the Internet.
2. The user attempts to receive Gmail.
3. Google sees attempted access from an unknown machine (the Proxy Server), and blocks access to the account.
4. Both an email and a text from Google are sent notifying the user of suspicious activity. Select the link in either message.
5. The first support file opens. Select the link.
6. In the authentication window, enter your email and password, and then select the *Sign In* button.
7. Another support window opens, explaining the next steps to take. Select the Continue button.
8. The final support window opens. Following the instructions, return to your email application and access your Gmail within 10 minutes. This will provide Google with the authentication to release your account.

## 20 Social Media

*A lot of people say that social media is making us all dumber, but I not think that.*

-Unknown author

### **What You Will Learn In This Chapter**

- Create strong passwords for social media sites
- Enable Login Approvals/Two-Factor Authentication
- Configure Facebook, LinkedIn, and Google privacy settings

## 20.1 What, me worry?<sup>1</sup>

There is no denying that social media<sup>2</sup> has provided us with new levels of connectivity and communication. Victims of natural and man-made catastrophes can instantly assure family and friends of their location and health. Job searches have been reduced to a couple mouse clicks, and those who once would have had no voice, may now have a voice that is heard around the world.

It's this last feature that is a true double-edged sword.

Virtually all social media is free to the user. Few users ever question how a service such as Facebook, that may have operating expenses of 12 *billion* dollars<sup>3</sup>, not only can afford such expense, but then go on to have a profit of 10 *billion* dollars. The business model for social media is based somewhat on advertising, but far more so on selling information about *you* to the advertisers.

Social media knows more about you than your mother. Their systems know what you are doing on their site—as well as all ancillary sites such as games, messengers, etc. that are in any way associated with the social media main site—how long you stay on each page, where you came from to land on that page, where you jump off to, what you have purchased, your interests, issues that prompt strong emotion, and more. The data and metadata held by social media sites has been shown to be an extremely accurate predictor of behavior. It is *this* information that is so very valuable to advertisers—and to potential employers, and the government.

It has become the norm for HR departments to scan all social media of a potential employee. The belief is that what a person expresses in social media is a more accurate and honest representation than the employment form or initial interview.

It should be needless to mention that government agencies closely track social media to predict and stop the next terrorist attack, as well as other lesser crimes.

<sup>3</sup> <https://finance.yahoo.com/quote/FB/financials?ltr=1>

## 20.2 Protecting Your Privacy on Social Media

Privacy on social media starts with understanding that social media watches *everything* you do, when you do it, how long you do it, and who you do it with. It also becomes your *brand*, intentional or not. It colors how others—friends, family, employers, and government—will see you. To this effect, you must manage your brand. This is done by being fully mindful of *everything* about your social media pages. Does it represent you in the best light? If taken out of context, how would it be interpreted?

The next step is to take whatever measures the social media site provides to ensure only those you want in, get in.

## 20.3 Facebook

Facebook is the reigning king of social media. Whether due to lax security concerns, or the wild popularity of the site, account breaches and hacks are common. Fortunately, Facebook has taken user-centric security controls out of the shadows, and made them easily accessible.

### 20.3.1 Assignment: Facebook Security and Login

#### Where You're Logged In

Facebook allows you to see what devices have logged in with your account credentials. Should you not recognize one of these devices, you can immediately log it out of Facebook.

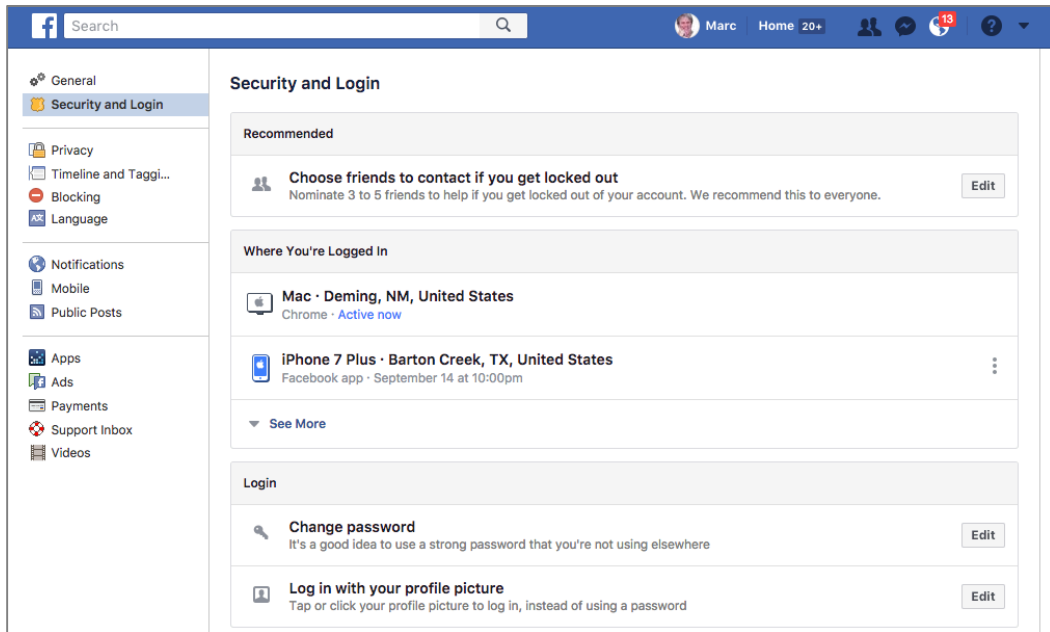

#### Password

The need for a strong Facebook password is no different than that for your computer. In this assignment, you change your current Facebook password to a strong password.

1. Open a browser to <https://facebook.com/>, and then log into your account.
2. Click the downward triangle at the top right corner of the Facebook window, and then select *Settings*.
3. From the sidebar, select *Security and Login*.

## 20 Social Media

4. Under the *Security and Login* main heading > *Where You're Logged In*, review all of the devices logged in with your credentials.

5. If a device is not recognized as yours, select the 3 dots to the right of the device > *Not You?*

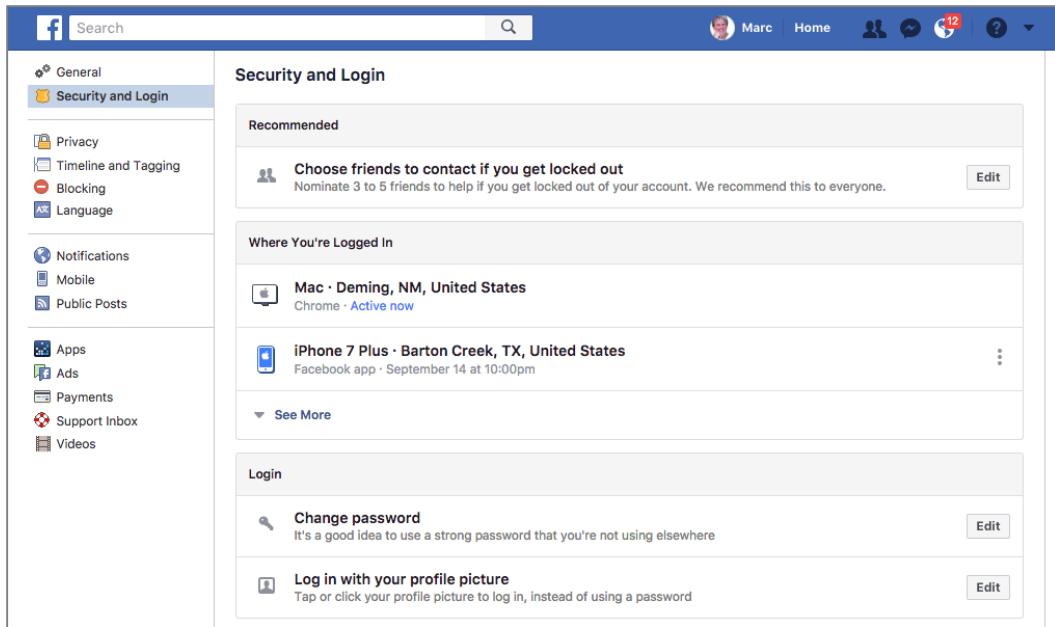

6. Repeat for each device you don't recognize.

### Create a new strong password

A strong password is just as vital for your social media sites as it is for your banking sites.

7. In the *Facebook Settings > Security and Login*, next to *Login > Change password*, select *Edit*.

8. Enter your *Current* password, enter your *New*, strong password in the *New* and *Re-type new* fields, and then click *Save Changes*.

### Get alerts about unrecognized logins

If someone does get around your security precautions and logs into your Facebook account, have Facebook alert you, so that you can log them off (step 1 in this assignment).

## 20 Social Media

9. In the *Facebook Settings > Security and Login*, under the *Setting Up Extra Security* section, select *Get alerts about unrecognized logins*.

Setting Up Extra Security

- Get alerts about unrecognized logins**  
On • We'll let you know if anyone logs in from a device or browser you don't usually use Edit
- Use two-factor authentication**  
On • Log in with a code from your phone as well as a password Edit
- Choose 3 to 5 friends to contact if you get locked out**  
Your trusted contacts can send a code and URL from Facebook to help you log back in Edit

10. Enable *Get Notifications*, and then add the email address(es) to which notifications are to be sent. When done, click *Save Changes*.

Setting Up Extra Security

**Get alerts about unrecognized logins**  
On • We'll let you know if anyone logs in from a device or browser you don't usually use Close

Get an alert when anyone logs into your account from an unrecognized device or browser.

**Notifications**

- Get notifications
- Don't get notifications

**Email**

- Email login alerts to marcmintz@mac.com, marcmintz@gmail.com, marc@marclmintz.com, marc@mintzit.com
- Don't get email alerts

[Add another email or mobile number](#)

Save Changes

### Facebook two-factor authentication

Every password can be broken. It is only a matter of resources (time and cpu cycles). Two-factor authentication can prevent a criminal from using your Facebook credentials.

## 20 Social Media

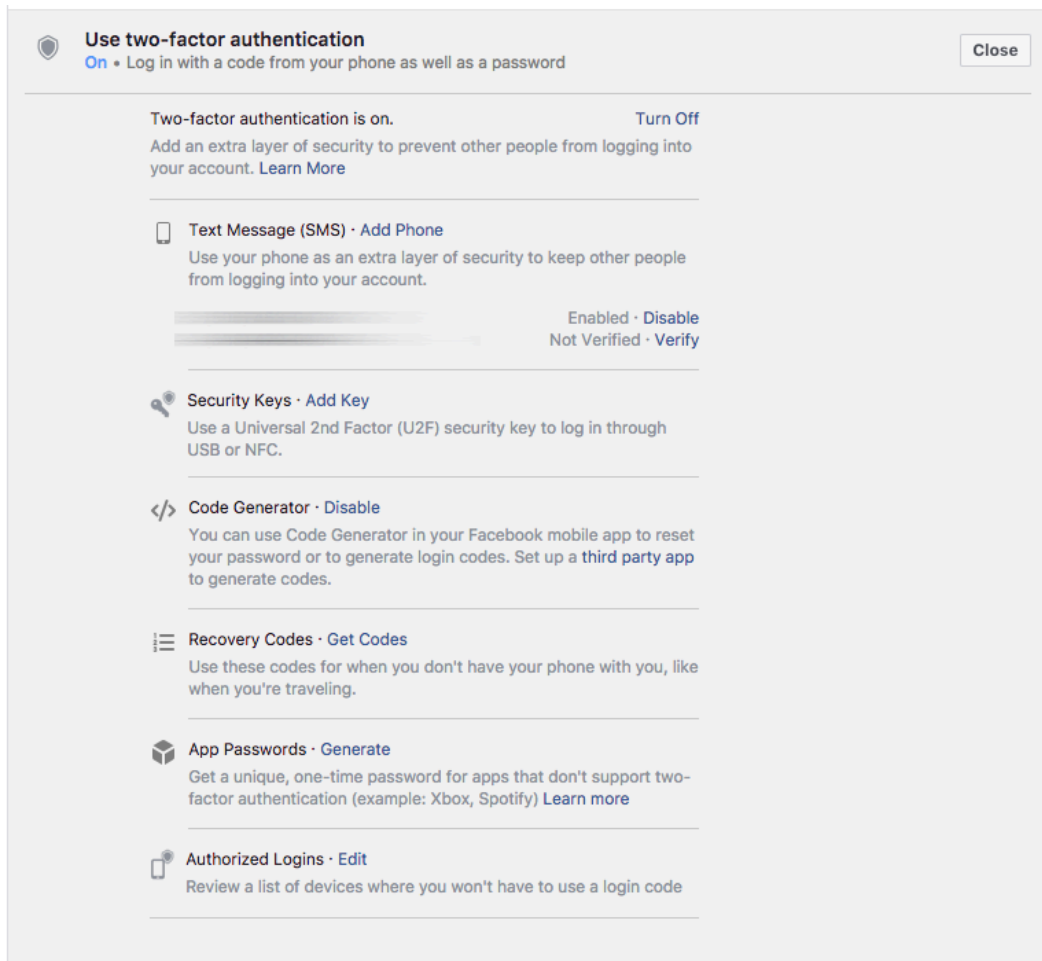

11. In the *Facebook Settings > Security and Login*, under the *Setting Up Extra Security* section, select *Use two-factor authentication*.

**Setting Up Extra Security**

	<b>Get alerts about unrecognized logins</b> On • We'll let you know if anyone logs in from a device or browser you don't usually use	<a href="#">Edit</a>
	<b>Use two-factor authentication</b> On • Log in with a code from your phone as well as a password	<a href="#">Edit</a>
	<b>Choose 3 to 5 friends to contact if you get locked out</b> Your trusted contacts can send a code and URL from Facebook to help you log back in	<a href="#">Edit</a>

## 20 Social Media

12. The *Use two-factor authentication* area opens. In this screenshot, it has been partially configured.

13. *Turn On* two-factor authentication, adding your mobile phone number.
14. Select *Recovery Codes – Get Codes*.
15. At the prompt, enter your Facebook password.
16. The *Your Recovery Codes* window appears with a list of 10, 1-time use codes. These may be used to authenticate with Facebook if you don't have access to your mobile phone.

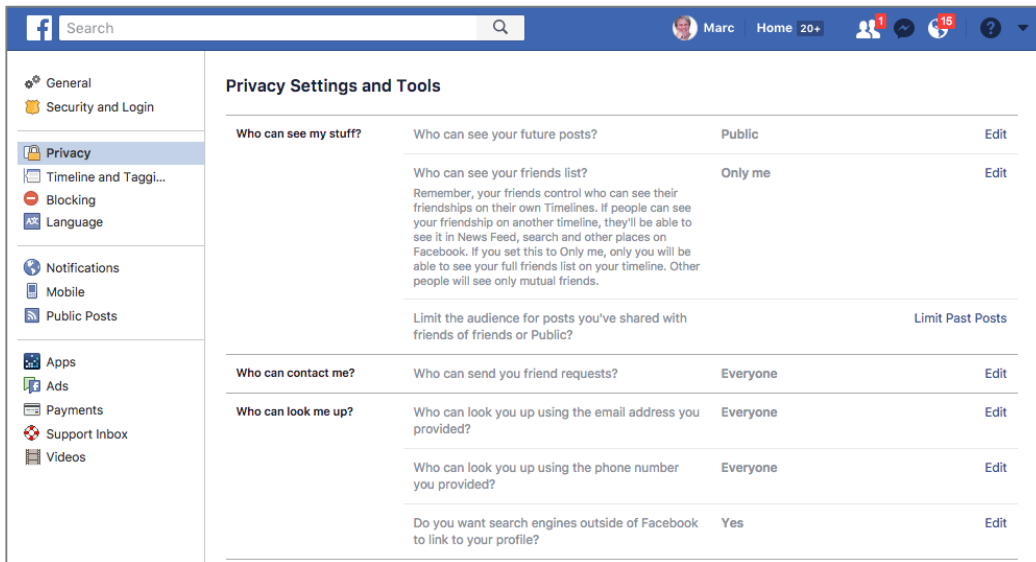

17. Securely record these numbers (you can copy/paste).
18. Close the *Your Recovery Codes* window.

### 20.3.2 Assignment: Facebook Privacy Settings

Facebook Privacy Settings allow you to filter who can see your posts, contact you, and look you up.

In this assignment, you configure your Facebook Privacy Settings.

1. From Facebook 3-line menu, select *Settings*, and the sidebar select *Privacy*.

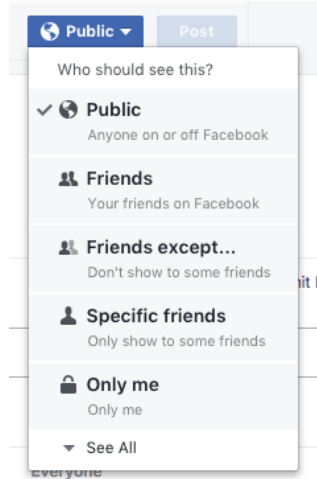

#### Who can see my stuff?

2. To the far right of *Who can see my stuff?* > *Who can see your future posts?* click *Edit*. Configure to your taste.

## 20 Social Media

- Note: Although mine is set to *Public*, I don't recommend this setting for most others. My site is strictly for business, and not a personal Facebook page.

3. To the far right of *Who can see your friends list?* click *Edit*. It is generally considered a breach of etiquette to share the identity of your friends. Select *Only me*.

4. To the far right of *Who can contact me?* > *Who can send you friend requests*, select *Edit*. Configure to your taste.

## 20 Social Media

5. To the far right of *Who can look me up?* > *Who can look you up using the email address you provided?* select *Edit*. Configure to your taste. However, for your privacy, it is recommended that only *Friends* be selected.

6. To the far right of *Who can look me up?* > *Who can look you up using the phone number you provided?* select *Edit*. Configure to your taste. However, for your privacy, it is recommended that only *Friends* be selected.

7. To the far right of *Who can look me up?* > *do you want search engines outside of Facebook to link to your profile?* select *Edit*. If you are interested in personal privacy, select *No*.

### 20.3.3 Timeline and Tagging Settings

In this section, you configure who is able to post to your timeline, who can see your timeline, and how to deal with others who tag you.

1. In *Facebook Settings*, select *Timeline and Tagging Settings* from the sidebar.

Timeline and Tagging Settings			
<b>Who can add things to my timeline?</b>	Who can post on your timeline?	Friends	Edit
	Review posts friends tag you in before they appear on your timeline?	On	Edit
<b>Who can see things on my timeline?</b>	Review what other people see on your timeline		View As
	Who can see posts you've been tagged in on your timeline?	Only me	Edit
	Who can see what others post on your Timeline?	Everyone	Edit
<b>How can I manage tags people add and tagging suggestions?</b>	Review tags people add to your own posts before the tags appear on Facebook?	On	Edit
	When you're tagged in a post, who do you want to add to the audience if they aren't already in it?	Only me	Edit
	Who sees tag suggestions when photos that look like you are uploaded?	No One	Edit

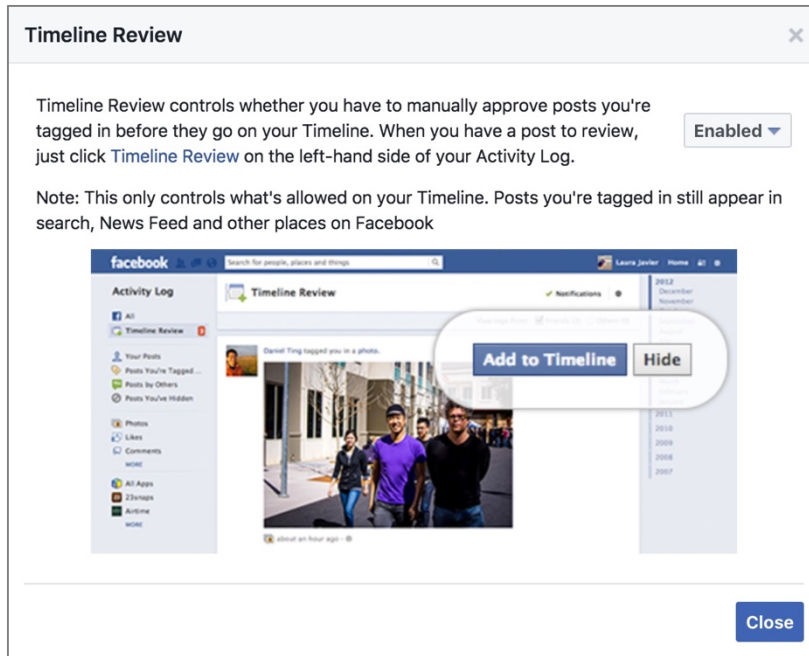

#### Who can add things to my timeline?

2. To the far right of *Who can add things to my timeline?* > *Who can post on your timeline?* select Edit. Configure to your taste.

## 20 Social Media

- Note: This controls what is allowed on your Timeline. Posts you are tagged in will still appear in the Facebook search, News Feed, and other places on Facebook.

3. To the right of *Who can add things to my timeline?* > *Review posts friends tag you in before they appear on your timeline?* select Edit. Set this to *On*, or be prepared for your site to turn into a Wild West show.

### **Who can see things on my timeline?**

4. To the right of *Who can see things on my timeline?* > *Review what other people see on your timeline* select *View As*. Your Facebook page opens, allowing you

## 20 Social Media

to view the page as others do. From the top of the page you can change *This is what your profile looks like to:* \_\_\_\_\_

The screenshot shows a Facebook profile for Marc Mintz. At the top, there's a search bar with 'Marc Mintz' and a navigation bar with 'Home 20+'. Below that, a banner indicates 'This is what your profile looks like to: Public View as Specific Person'. A section titled 'DO YOU KNOW MARC?' contains the text 'To see what he shares with friends, send him a friend request.' and an 'Add Friend' button. The main content area features an 'Intro' section with location 'Lives in Albuquerque, New Mexico' and relationship status 'In a relationship'. To the right, a post from Marc Mintz (8 hrs) shares a link to 'our Credit Scores' and displays two credit score gauges: TransUnion (773) and Equifax (769). Below the gauges, there's a collection of 'Practical Paranoid' security guides for various operating systems like Android, iOS, and Windows.

5. If horror has just run up your spine, it may be a good time to edit your Facebook account.
6. Click the *Back* button to return to *Settings*.
7. To the right of *Who can see things on my timeline?* > *Who can see posts you've been tagged in on your timeline?* select *Edit*, and then configure to your taste. I recommend setting to *Only me*.
8. To the right of *Who can see things on my timeline?* > *Who can see what others post on your timeline?* select *Edit*, and then configure to your taste.

### How can I manage tags people add and tagging suggestions?

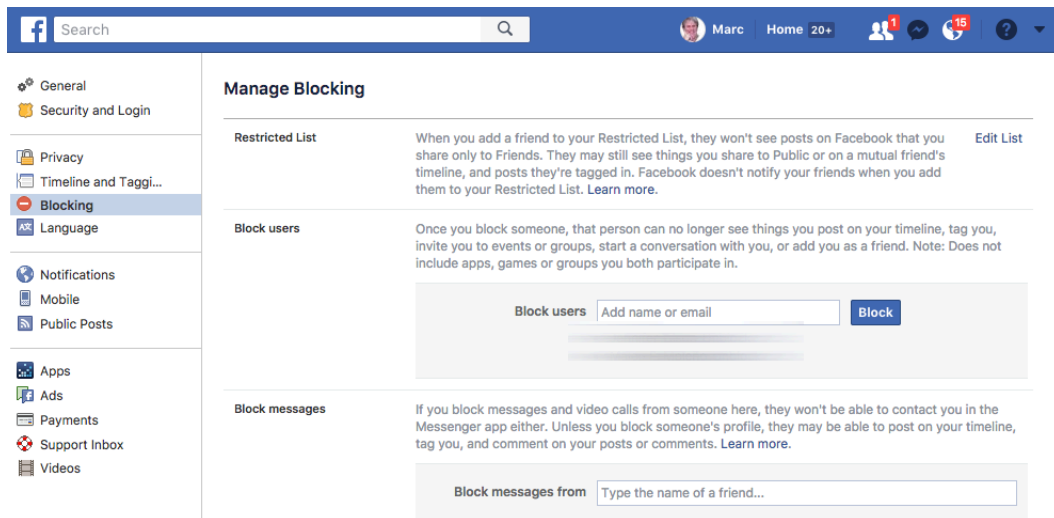

9. To the right of *How can I manage tags...* > *Review tags people add to your own posts before the tags appears on Facebook* select *Edit*, and then set to *On*.

10. To the right of *How can I manage tags...* > *When you're tagged in a post, who do you want to add to the audience if they aren't already in it?* select *Edit*, and then configure to taste. I recommend setting to *Only me*.
11. To the right of *How can I manage tags...* > *Who sees tag suggestions when photos that look like you are uploaded?* select *Edit*, and then set to *No One*.

### 20.3.4 Assignment: Facebook Manage Blocking

Although Facebook has a financial stake in sucking you into everything that happens on the site, they do allow some freedom to block users, messages, apps, invites, and pages.

1. Open *Facebook Settings* > *Blocking*.

### **Restricted List**

When a friend is added to the *Restricted List*, they won't see posts on Facebook that are shared only to Friends.

2. To the right of *Restricted List* select *Edit List*.
3. If you have Facebook Friends that you don't want to see posts restricted to your Friends, add their name to this list, and then click *Finish*.

### **Block Users**

If you block a Facebook user, they can't see your timeline posts, tag you, invite you, converse with you, or add you as a friend.

4. Should you have a troll bothering you that should be blocked, in the *Block users* field add their name.

### **Block app invites**

Once you block app invites from a Facebook user, all future app requests from them are ignored.

5. If you are bombarded with app invites from a Facebook user, in the *Block invites from* field, add their name.

### **Block event invites**

Once you block event invites from a Facebook user, all future event invitations from them are ignored.

6. If you are bothered with event invites from a Facebook user, in the *Block invites from* field, enter their name.

### **Block apps**

When blocking an app, it can no longer contact you or access no-public information about you through Facebook.

## 20 Social Media

7. To block an app, in the *Block apps* field, enter the name of the app.

### Block Pages

When blocking a Page, there can be no more interaction between you and the Page.

8. To block a page, in the *Block Pages* field, enter the name of the Page.

### 20.3.5 Assignment: Facebook Public Posts

Think deep about who you wish to see your posts. Remember that colleges, recruiters, human resource departments, and more may be watching for you.

1. Open *Facebook Settings > Public Posts*.

The screenshot shows the Facebook settings page for 'Public Posts'. The left sidebar contains navigation options: General, Security and Login, Privacy, Timeline and Tagging, Blocking, Language, Notifications, Mobile, Public Posts (selected), Apps, Ads, Payments, Support Inbox, and Videos. The main content area is titled 'Public Post Filters and Tools' and includes the following sections:

- Who Can Follow Me:** Followers see your posts in News Feed. Friends follow your posts by default, but you can also allow people who are not your friends to follow your public posts. Use this setting to choose who can follow you. Each time you post, you choose which audience you want to share with. [Learn more.](#) A dropdown menu is set to 'Public'.
- Public Post Comments:** Who can comment on your public posts? Public. [Edit](#)
- Public Post Notifications:** Get notifications from Public. [Edit](#)
- Public Profile Info:** Who can like or comment on your public profile pictures and other profile info? Public. [Edit](#)
- Comment Ranking:** Comment ranking is Off. [Edit](#)
- Username:** <http://www.facebook.com/marclmintz>. [Edit](#)
- Twitter:** Connect a Twitter account. [Edit](#)
- Follow Plugin:** Add a follow button to your website by copying the code below. Visit our docs for more info and options. A code block is shown with a preview of a 'Follow' button. Below the code, it says: **Preview:** [Follow](#) 698 people are following Marc Mintz. Be the first of your friends.

## 20 Social Media

2. To the right of *Who Can Follow Me*, select who can follow your posts by default.

3. To the right of *Public Post Comments*, select who can comment on your public posts.

4. To the right of *Public Post Notifications*, select if you wish to be notified when people who aren't your friends follow you, like or comment on your public posts.

5. To the right of *Comment Ranking*, select if you wish to see the most relevant comments on your public posts first.

6. You may change your Facebook username from the *Username* field.

## 20.3.6 Assignment: Facebook Apps

Developers that have their apps and games on Facebook are monetizing through *your* information. When signing up for these items, you give the developer authorization to see your profile, and know almost everything that Facebook knows about you. They may then take your information and use it for their own marketing projects, or sell the information to others.

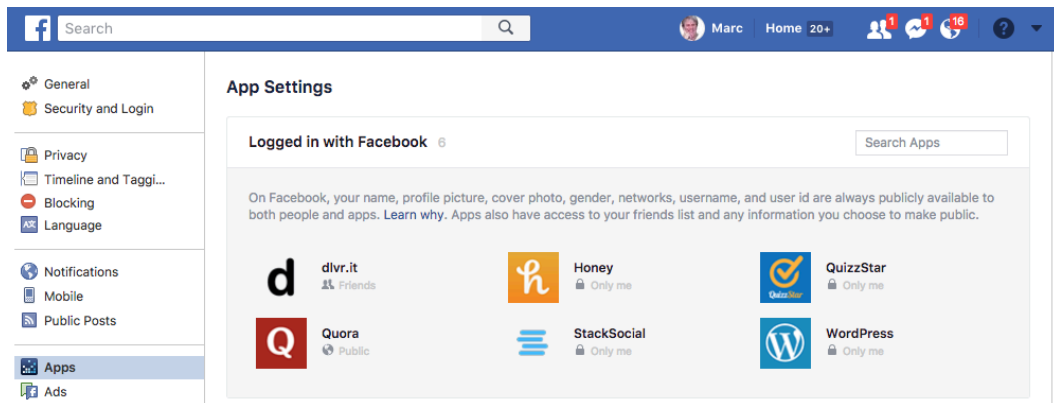

In other words, if you indulge in Facebook apps or games, you've come close to giving up on privacy.

However, you can still use these apps and games. All you need do is to create another Facebook account *just* for this purpose, and provide minimal personal information in your Facebook profile.

It must be noted that some of your apps were intentionally selected by the Facebook user, but most are unintentionally selected. This can happen when you respond to a Friend's request to play a Facebook game, or take a quiz on Facebook. Because it can happen with just a single click, and appear completely innocent, it's a good idea to schedule a weekly review of your Facebook apps.

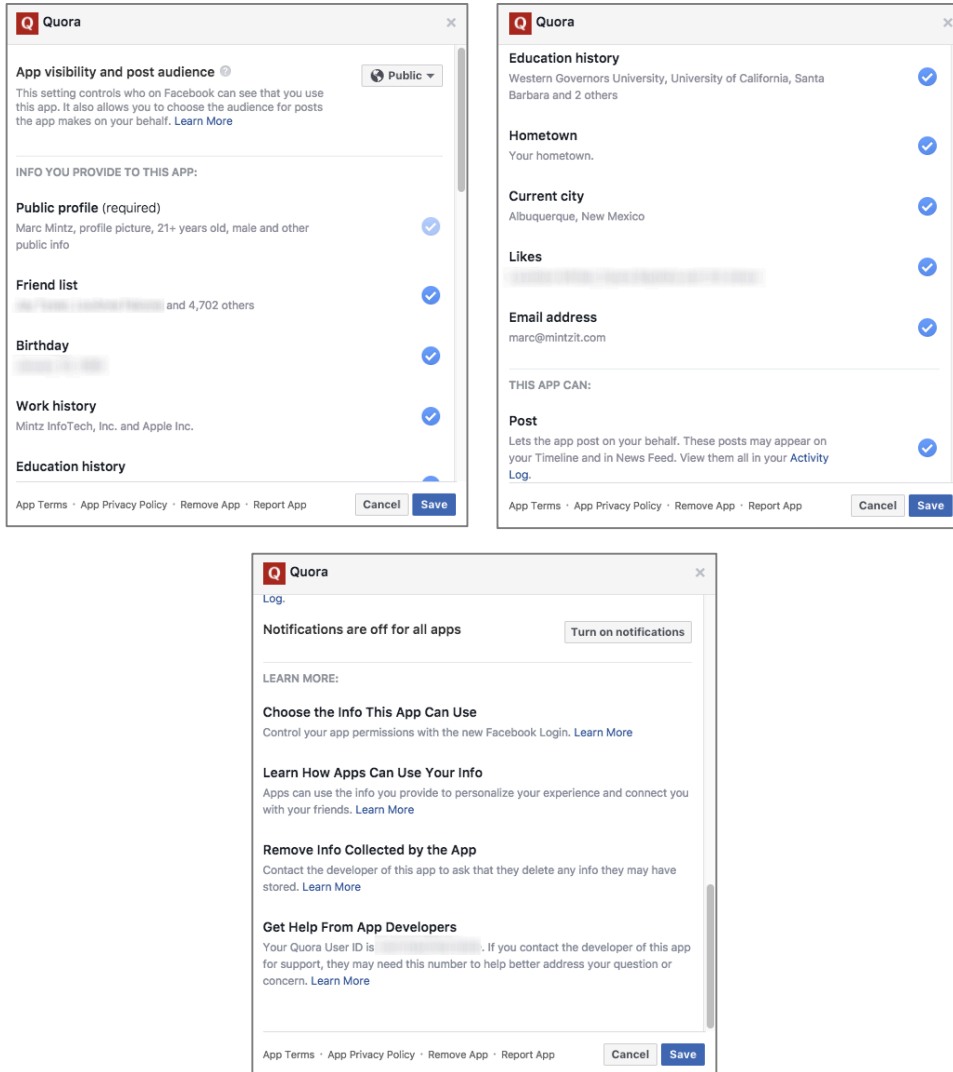

### Logged in with Facebook

1. Open *Facebook Settings > Apps*. The *Logged in with Facebook* field displays the apps for which you are logged in with your Facebook account display.

## 20 Social Media

2. Click on either the name, icon, or pencil (edit) icon for the app. For my example, I'm selecting *Quora*. This opens the *App Information Window*. Give deep thought as to what info you wish the developer to have. You may disable some of these options. However, if you have been using the app for longer than a second, the developer already has all this data. Although there is the option to *Remove Info Collected by the App*, if you believe that has an effect in the real world, I have a bridge to sell you.

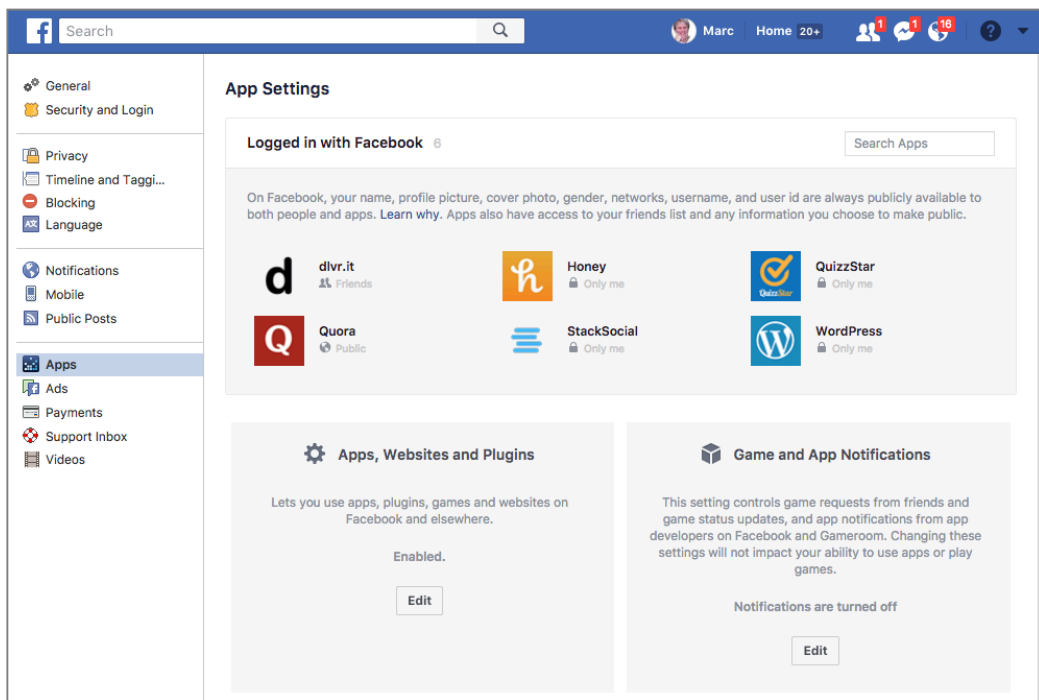

## 20 Social Media

3. If there are data points you want to block this app from accessing, you can click the target check mark. Understand, this is shutting the barn door after the cows are out.
4. If you wish to remove this app, so that it no longer has access to your Facebook information, select the *Remove App* at the bottom of the window.
5. When you have completed configuring your app settings, click *Save* or *Cancel*.
6. The app will no longer appear in the *Logged in with Facebook* field.

### Apps, Websites, and Plugins

7. Select *Facebook Settings > Apps > Apps, Websites, and Plugins*, and then click *Edit*.

The screenshot shows the Facebook App Settings page for a user named Marc. The page is divided into two main sections: 'App Settings' and 'Apps, Websites and Plugins' / 'Game and App Notifications'.

**App Settings:** This section is titled 'Logged in with Facebook' and includes a search bar for apps. Below the search bar, there is a warning: 'On Facebook, your name, profile picture, cover photo, gender, networks, username, and user id are always publicly available to both people and apps. Learn why. Apps also have access to your friends list and any information you choose to make public.' Below this warning, there are six app cards, each with its logo, name, and privacy status:

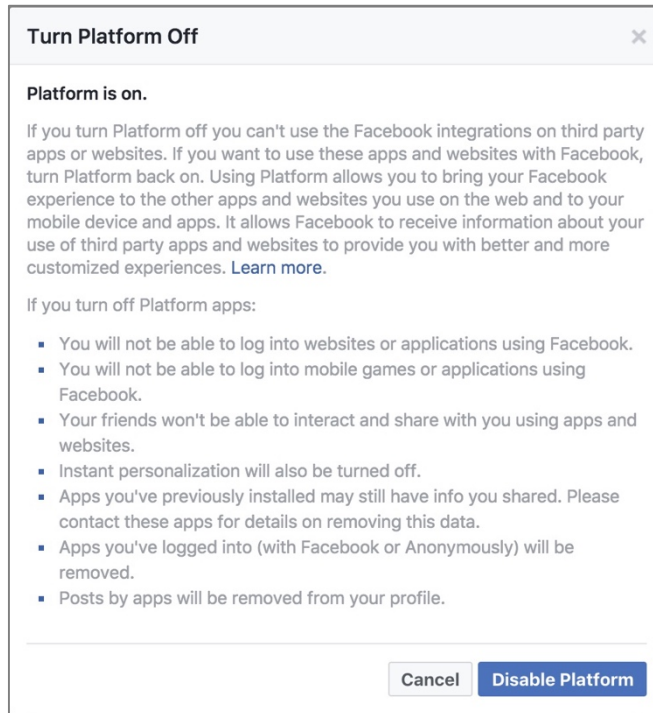

- divr.it:** Friends
- Honey:** Only me
- QuizzStar:** Only me
- Quora:** Public
- StackSocial:** Only me
- WordPress:** Only me

**Apps, Websites and Plugins:** This section has a title 'Apps, Websites and Plugins' and a description: 'Lets you use apps, plugins, games and websites on Facebook and elsewhere.' The status is 'Enabled.' and there is an 'Edit' button.

**Game and App Notifications:** This section has a title 'Game and App Notifications' and a description: 'This setting controls game requests from friends and game status updates, and app notifications from app developers on Facebook and Gameworks. Changing these settings will not impact your ability to use apps or play games.' The status is 'Notifications are turned off' and there is an 'Edit' button.

## 20 Social Media

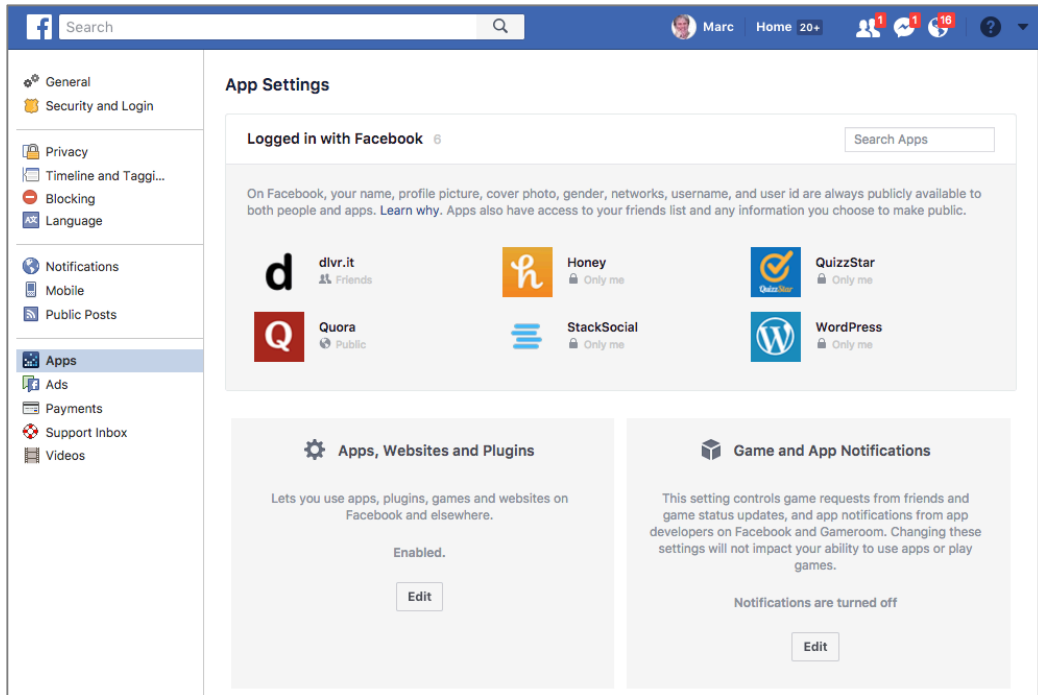

- By default, *Apps, Websites and Plugins* is *Enabled*. If you wish to disable it, click the *Edit* button. The *Turn Platform Off* window appears. Read the warning well. You may not be able to function well on Facebook with these features disabled.

- Once you have reviewed the warning, select either *Cancel* or *Disable Platform*.

## Game and App Notifications

10. Select *Facebook Settings > Apps > Game and App Notifications*, and then select *Edit*.

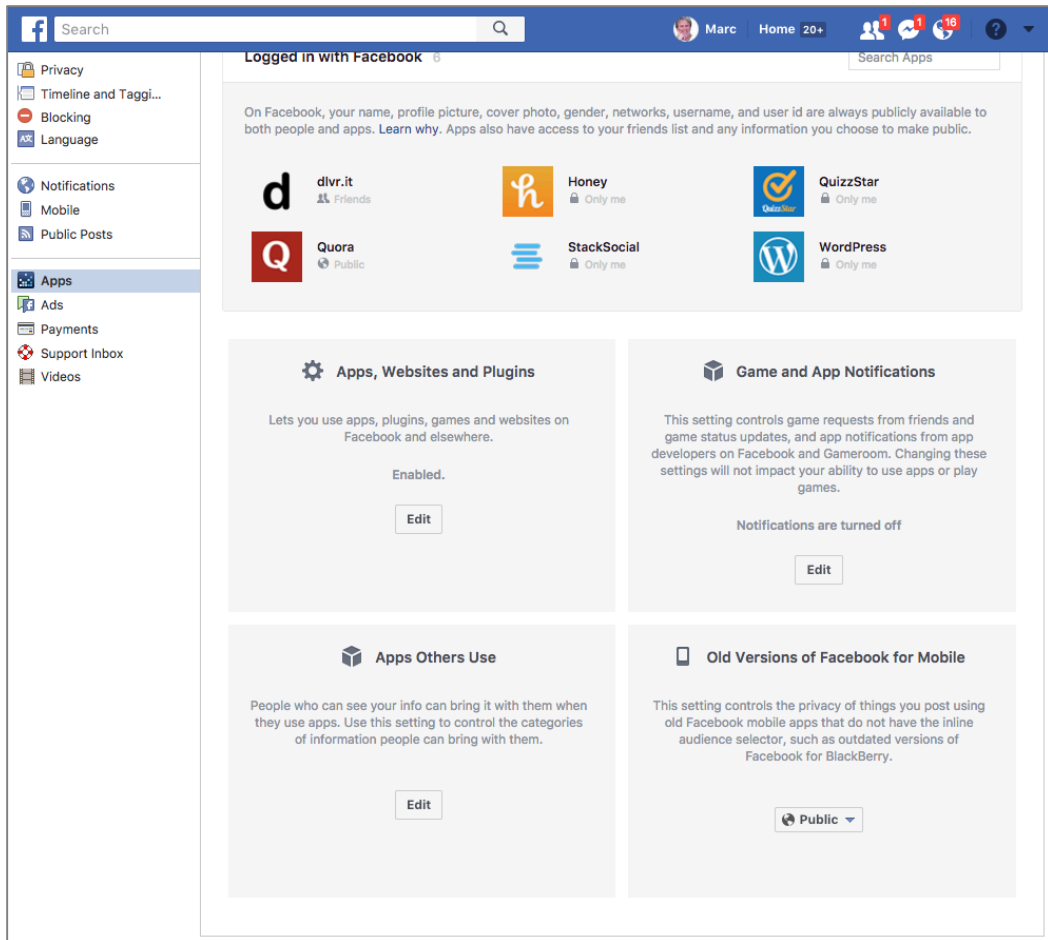

11. This setting has no impact on privacy or security. However, if you would prefer that Facebook games and apps not send notifications to you, click the *Edit* button, and then click the *Turn off* button.

## Apps Others Can Use

When someone on Facebook who can see your information then uses an app, by default that app has access to a great deal of your Facebook data. This setting allows you to manage what information apps that others are using has access to.

12. Select *Facebook Settings > Apps > Apps Others Use*, and then select *Edit*.

## 20 Social Media

13. In the *Apps Others Use* window, you can manage what information the apps other people are using have access to. When complete, click the *Save* button.

**Apps Others Use** ✕

People on Facebook who can see your info can bring it with them when they use apps. This makes their experience better and more social. Use the settings below to control the categories of information that people can bring with them when they use apps, games and websites.

<input type="checkbox"/> Bio	<input type="checkbox"/> Posts on my timeline
<input type="checkbox"/> Birthday	<input type="checkbox"/> Hometown
<input type="checkbox"/> Family and relationships	<input type="checkbox"/> Current city
<input type="checkbox"/> Interested in	<input type="checkbox"/> Education and work
<input type="checkbox"/> Religious and political views	<input type="checkbox"/> Activities, interests, things I like
<input checked="" type="checkbox"/> My website	<input type="checkbox"/> My app activity
<input type="checkbox"/> If I'm online	

If you don't want apps and websites to access other [categories of information](#) (like your friend list, gender or info you've made public), you can turn off all Platform apps. But remember, you will not be able to use any games or apps yourself.

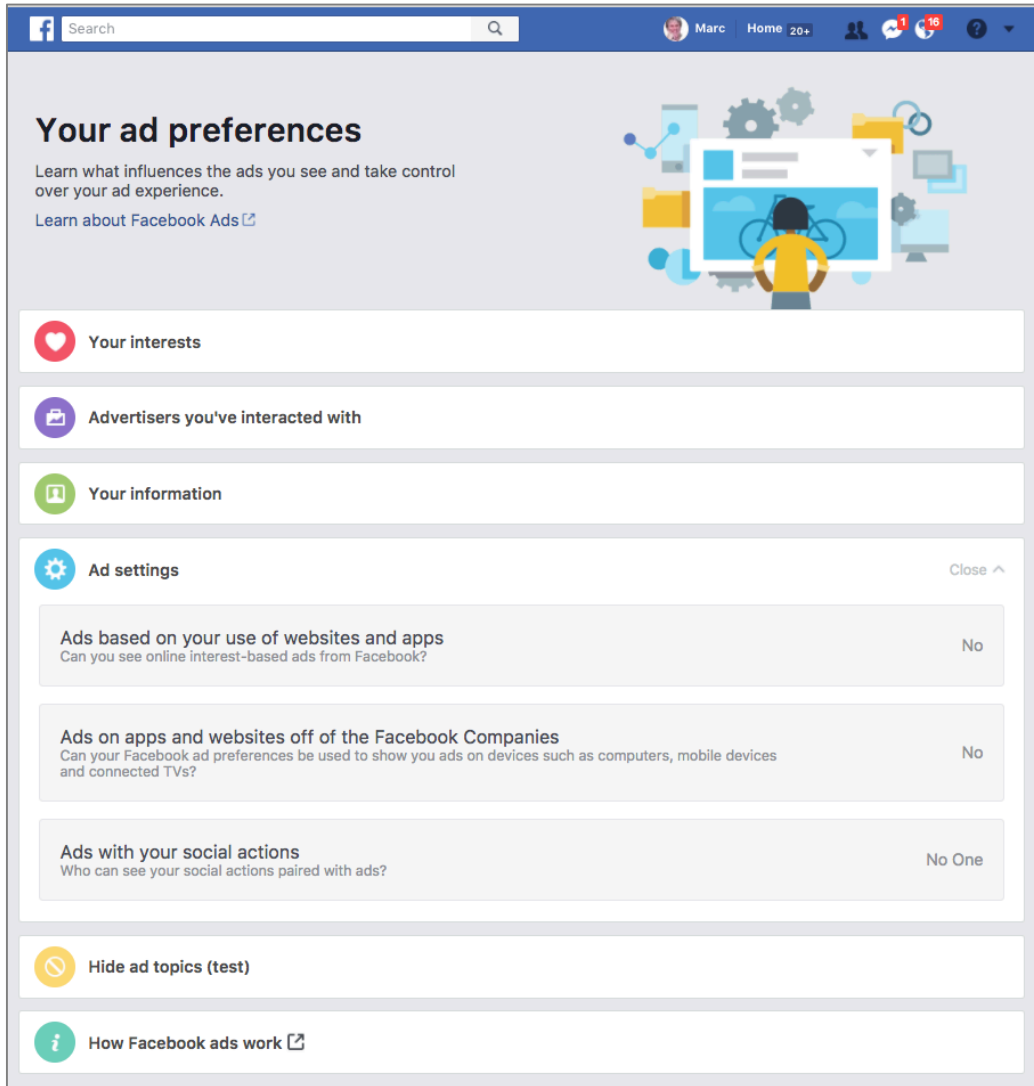

### Ads

Not only does Facebook and all the games and apps associated with it make money from your information, they also are in the (gasp) advertising business. Although you can't get away from being inundated with ads while on Facebook, you can request that they have less access to your personal information during the process.

## 20 Social Media

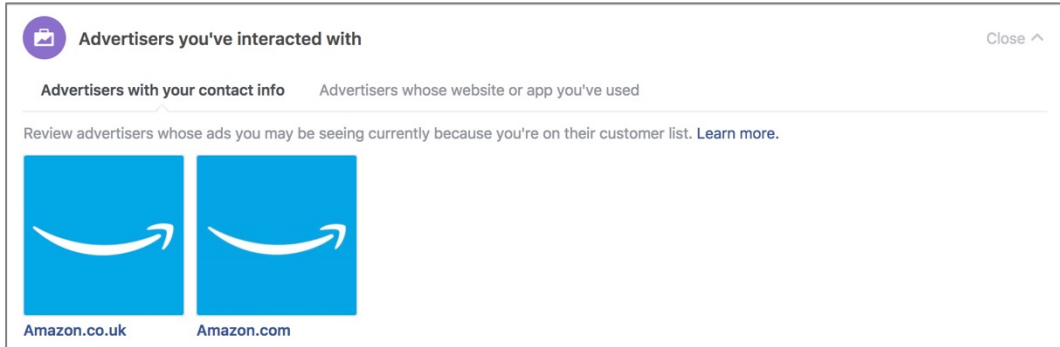

14. Select *Facebook Settings* > *Ads*. This will open the *Your ad preferences* page.

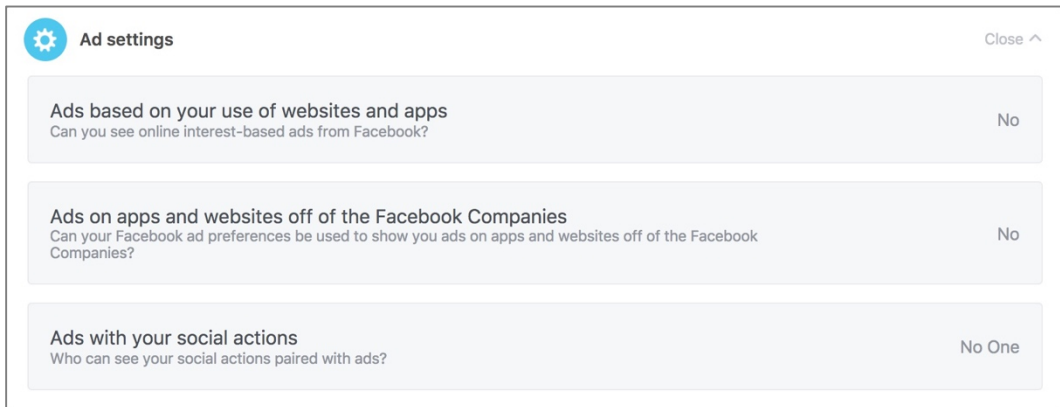

15. If you would like to see ads based on your stated interests, click *Your interests*, and then select your target areas of interest. Or better yet, remove your interests so that the advertisers know less about you.

## 20 Social Media

16. To see which advertisers have you on their mailing list due to interacting with them on Facebook, click *Advertisers you've interacted with*. When done, click *Close*.

17. Click *Ad settings*.

18. To prevent ads based on websites and apps associated with Facebook that you have visited or used, set *Ads based on your use of websites and apps* to *No*.
19. To prevent ads based on websites and apps not associated with Facebook that you have visited, set *Ads on apps and websites off of the Facebook Companies* to *No*.
20. To prevent your friends from seeing ads stating *<Your Name> Likes This*, set *Ads with your social actions* to *No One*.
21. Click *Close*.

22. If you have difficulty falling to sleep at night, click *How Facebook ads work*.

## 20.4 LinkedIn

While Facebook is the current reigning king of non-business social media, LinkedIn holds the crown for business. Whether it be to market one's services, look for a new job, or simply network with other business people, LinkedIn is the place to be.

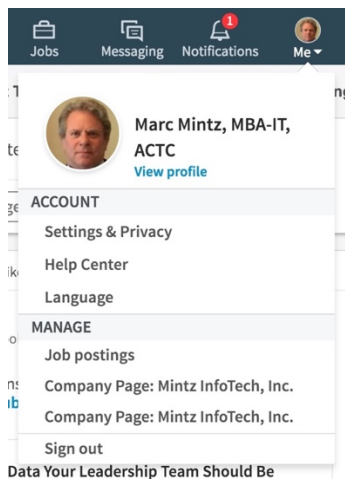

But just as with all other social media sites, it is vital to be mindful of privacy and security on LinkedIn. It could be business suicide to have anything but the very best be associated with your account.

### 20.4.1 Assignment: LinkedIn Account Security

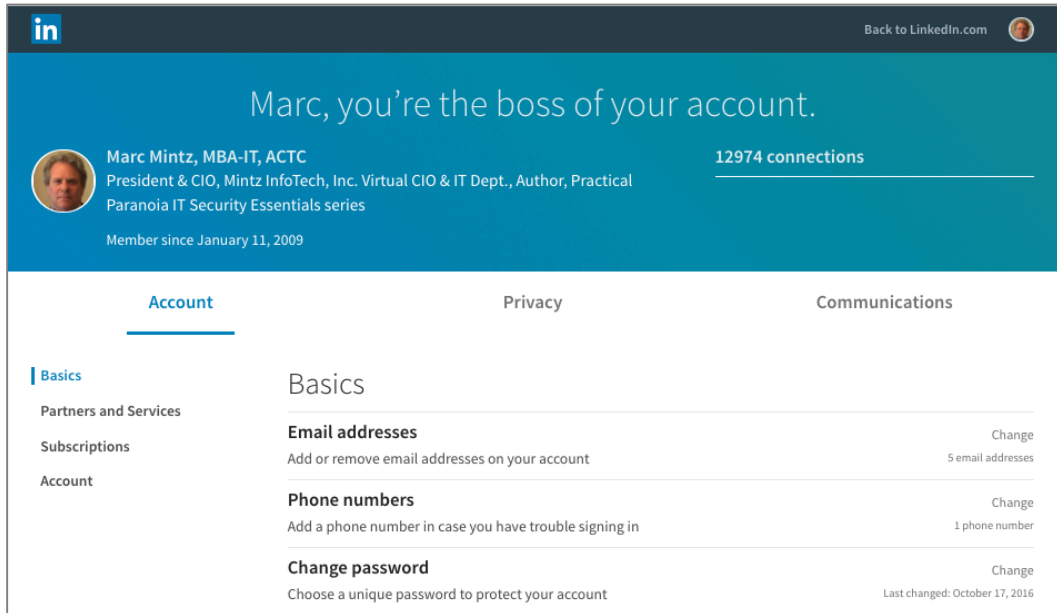

The need for a strong LinkedIn password is no different than that for your computer.

In this assignment, you change your current LinkedIn password to a strong password.

1. Open a browser to <https://linkedin.com/>.
2. From the tool bar, select the *Me* icon > *Settings & Privacy*.

3. The *Settings & Privacy* page opens.

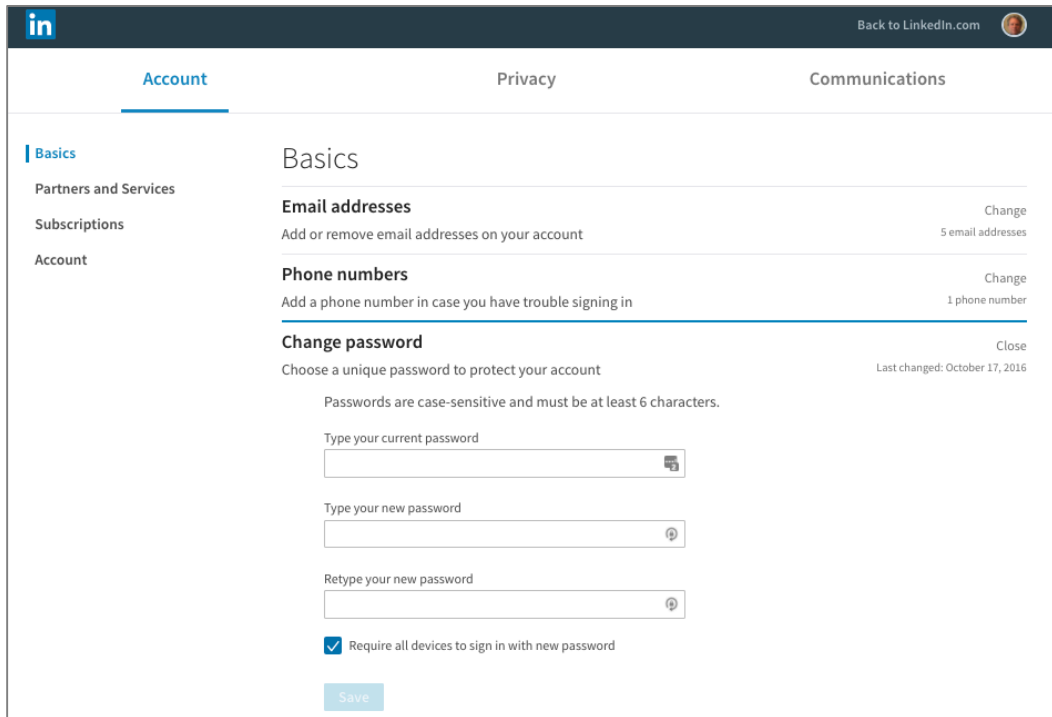

### Set a strong password

4. Select the *Account* tab, *Basics* from the sidebar, and then to the right of *Change Password*, click *Change*.

## 20 Social Media

5. In the *Change password* area enter your current password, your new password, retype your new password, and then select *Save*.

The screenshot shows the LinkedIn 'Change password' form. At the top, there is a navigation bar with the LinkedIn logo on the left and 'Back to LinkedIn.com' with a profile picture on the right. Below this, there are three tabs: 'Account' (selected), 'Privacy', and 'Communications'. On the left side, there is a sidebar menu with 'Basics' (selected), 'Partners and Services', 'Subscriptions', and 'Account'. The main content area is titled 'Basics' and contains three sections: 'Email addresses' (with a 'Change' link and '5 email addresses'), 'Phone numbers' (with a 'Change' link and '1 phone number'), and 'Change password' (with a 'Close' link and 'Last changed: October 17, 2016'). The 'Change password' section includes the instruction 'Choose a unique password to protect your account' and 'Passwords are case-sensitive and must be at least 6 characters.' It has three input fields: 'Type your current password', 'Type your new password', and 'Retype your new password'. There is a checkbox labeled 'Require all devices to sign in with new password' which is checked. At the bottom of the form is a 'Save' button.

### Verify where you're signed in

If someone has penetrated your LinkedIn account, you will be able to see unknown devices signed in. If so, you can kick them off.

## 20 Social Media

6. In *LinkedIn Settings & Privacy* page, *Account* tab, *Basics* sidebar > *Where you're signed in* area, select *Change*. View where you are currently logged in to LinkedIn.

The screenshot shows the LinkedIn 'Where you're signed in' section. It displays the current session and other active sessions. The current session is from Albuquerque, New Mexico, United States, using Chrome on Mac OS X. The IP address is 71.36.58.225, owned by Qwest Communications Company LLC. There is one other active session from Canoga Park, California, United States, accessed 24 seconds ago, using Mobile Safari on iOS.

Current session	Details
	Albuquerque, New Mexico, United States (Approximate location) Chrome on Mac OS X IP Address: 71.36.58.225 IP Address Owner: Qwest Communications Company LLC

Other active sessions (1) [Sign out of all these sessions](#)

Last accessed	Details
24 seconds ago	Canoga Park, California, United States (Approximate location) <a href="#">Sign out</a> <a href="#">Details</a> Mobile Safari on iOS

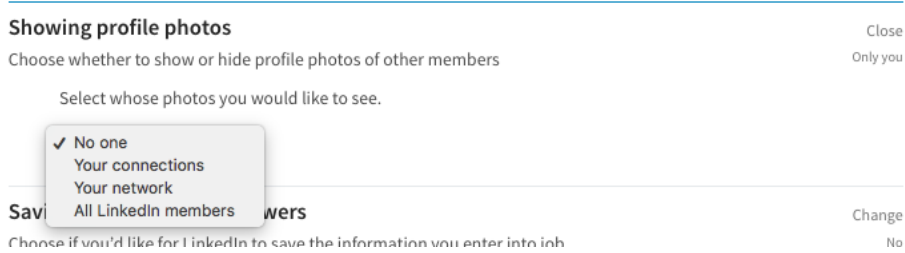

7. If you don't recognize any of these devices, you may kick them off individually by selecting *Sign out*, or kick everyone off by selecting *Sign out of all these sessions*.

### Showing profile photos

You may have reason not to want your face to be seen or recognized by the LinkedIn community. You can choose who gets to see your profile photos.

## 20 Social Media

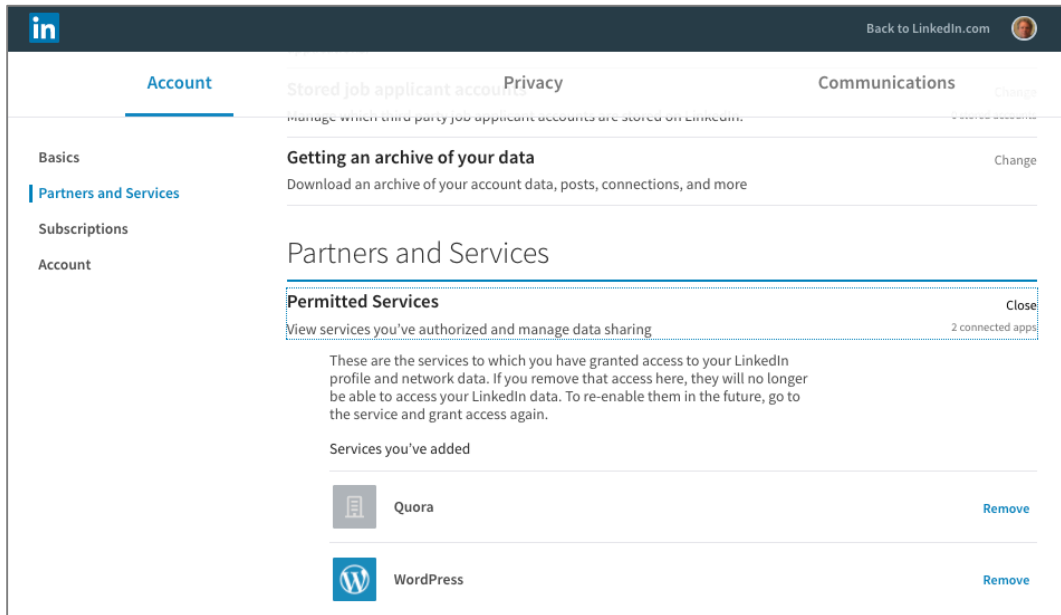

8. In *LinkedIn Settings & Privacy* page, *Account* tab, *Basics* sidebar > *Showing profile photos* area, select *Change*. Configure to your taste.

### Partners and Services

Most LinkedIn members don't realize they have authorized many organizations to access their data. LinkedIn allows you to see who has been authorized, and if desired, cut them off.

9. In *LinkedIn Settings & Privacy* page, *Account* tab, *Partners and Services* sidebar > *Permitted Services* area, select *Change*. Configure to your taste.

## 20.4.2 Assignment: LinkedIn Privacy Settings

In this assignment, you configure LinkedIn privacy settings.

1. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Profile privacy* sidebar > *Edit your public profile* area, select *Change*. Configure to your taste. When complete, select *Save*.

The screenshot shows the LinkedIn Privacy Settings interface. At the top, there are three tabs: "Account", "Privacy" (which is selected and underlined), and "Communications". Below the tabs, on the left, is a sidebar with the following categories: "Profile privacy" (highlighted with a blue bar), "Blocking and hiding", "Job seeking", "Data privacy and advertising", and "Security". The main content area is titled "Profile privacy" and contains two sections:

- Edit your public profile** (with a "Change" link on the right): Choose how your profile appears to non-logged in members via search engines or permitted services.
- Manage active status** (with a "Change" link on the right): Choose how your active status is displayed to your connections.

**in**
Back to LinkedIn.com

### Public profile settings

When viewers haven't signed in, this is how your profile appears. You control what sections are visible and can update your URL.

### Summary

Having grown frustrated with the old-school "break/fix" and "managed services" business model, I closed my company in early 2014 in order to reinvent both myself, my staff, and my organization.

We created Mintz InfoTech, Inc. completely fresh. New business methods and strategies all based on our new mission to provide the individual IT user, the small and medium size business with the same Chief Information and Security Officer and IT department resources otherwise available only to large business. Every single member of our staff is tasked with partnering with you to empower your organization to be more competitive through the intelligent use of technology.

Fundamentally, Mintz InfoTech IS your IT department, and I am your Virtual CIO. In the simplest of terms this means:

- Every one of our staff is IT certified.
- We service the entire state of New Mexico from offices in Albuquerque and Santa Fe.
- We are there for you 24/7/365 via phone, remote support, and on-site.
- All of our services are 100% satisfaction guaranteed.

Please feel free to call for a personal consult to discover how Mintz InfoTech is your exceptional choice.

Warmly,

Marc L. Mintz, MBA-IT, ACTC, ACSP  
President & CIO

### Edit public profile URL

Enhance your personal brand by creating a custom URL for your LinkedIn public profile.

[www.linkedin.com/in/marcmintz](http://www.linkedin.com/in/marcmintz)

---

### Customize Your Public Profile

Select what shows via searches on Bing, Google, etc. as well as on public profile badges and permitted services like Outlook, when the viewers are not logged-in members or did not bind their LinkedIn account to their account on such services.

## Manage active status

You are able to choose who can see when you are online.

## 20 Social Media

2. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Profile privacy* sidebar > *Manage active status* area, select *Change*. Configure to your taste.

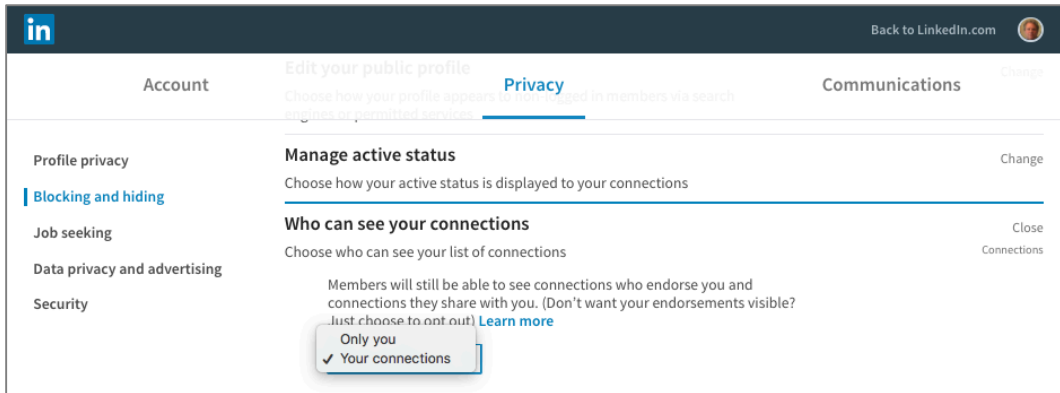

The screenshot shows the LinkedIn Privacy settings page. The 'Privacy' tab is selected. On the left sidebar, 'Blocking and hiding' is highlighted. The main content area is titled 'Manage active status' and includes a 'Close' button. Below the title, it says 'Choose how your active status is displayed to your connections'. There is a section 'Display your active status' with a toggle switch set to 'Yes' and the text 'Show my connections when I'm active on LinkedIn or available on mobile'. A note below says '\*Changes may take up to 30 minutes'. Another section 'Hide active status from select people' is visible, with a note '\*When hiding your status from someone, you'll also lose the ability to see when they're online'.

### Who can see your connections

LinkedIn is in large part about networking. You may choose to let others see your connections.

3. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Profile privacy* sidebar > *Who can see your connections* area, select *Change*. Configure to your taste.

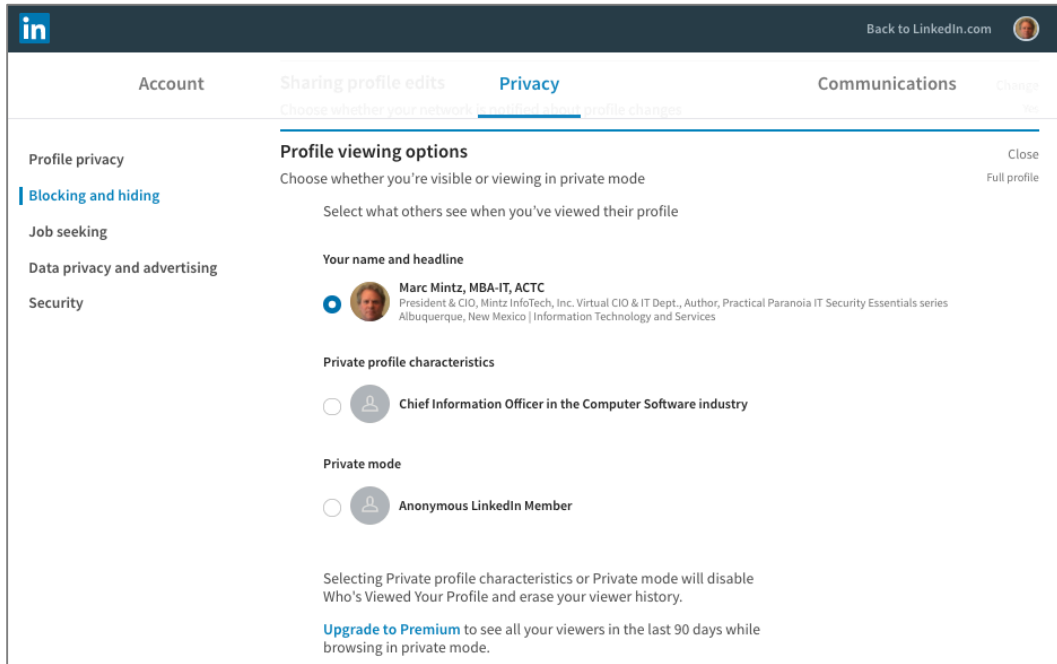

The screenshot shows the LinkedIn Privacy settings page. The 'Privacy' tab is selected. On the left sidebar, 'Blocking and hiding' is highlighted. The main content area is titled 'Who can see your connections' and includes a 'Change' button. Below the title, it says 'Choose who can see your list of connections'. There is a dropdown menu with two options: 'Only you' and 'Your connections', with 'Your connections' selected. A note below says 'Members will still be able to see connections who endorse you and connections they share with you. (Don't want your endorsements visible? Just choose to opt out) Learn more'. There is also a 'Connections' button.

## Profile viewing options

You may configure how transparent your identity is on LinkedIn.

4. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Profile privacy* sidebar > *Profile viewing options* area, select *Change*. Configure to your taste.

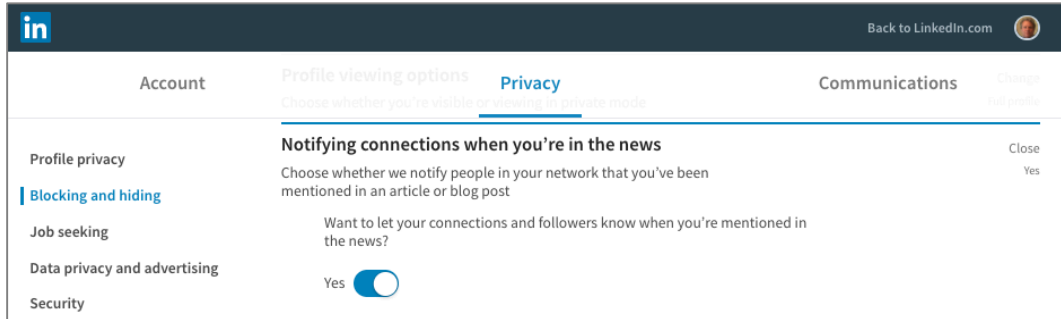

## Notifying connections when you're in the news

This could be good or bad news. A national merit award, or a best-forgotten night on the town. Choose wisely.

## 20 Social Media

5. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Profile privacy* sidebar > *Notifying connections when you're in the news* area, select *Change*. Configure to your taste.

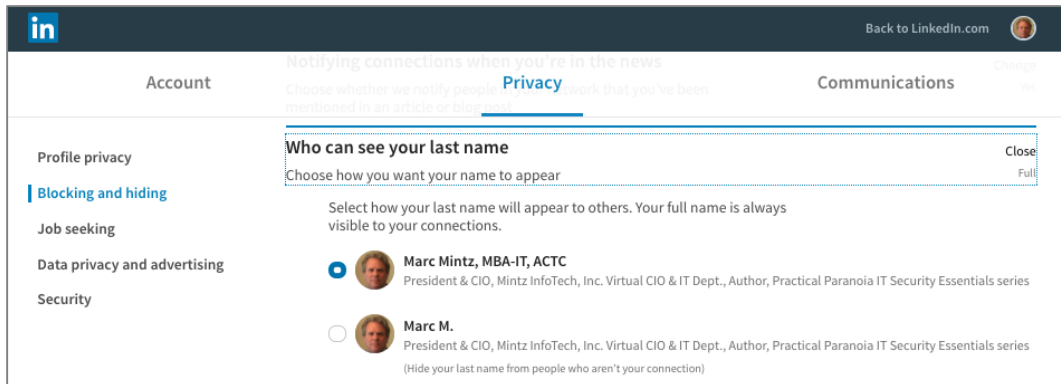

The screenshot shows the LinkedIn Privacy settings page. The 'Privacy' tab is selected. Under the 'Profile privacy' sidebar, the 'Notifying connections when you're in the news' setting is highlighted. The setting is currently set to 'Yes'. A 'Change' link is visible in the top right corner of the setting area.

### Who can see your last name

This ties in with your level of transparency.

6. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Profile privacy* sidebar > *Who can see your last name* area, select *Change*. Configure to your taste.

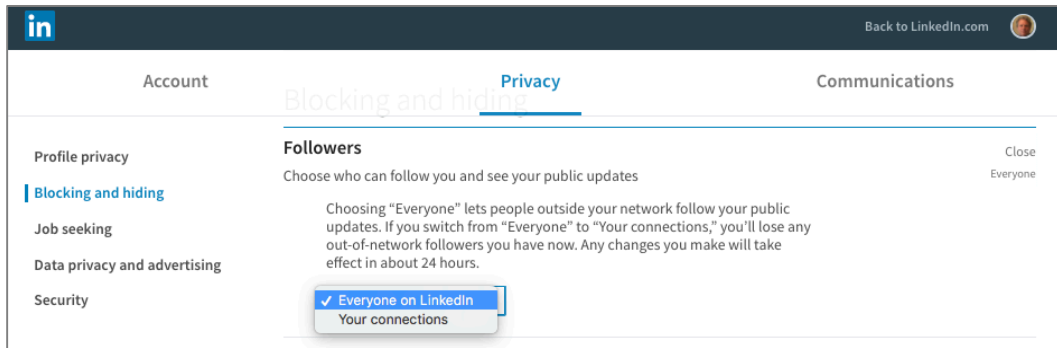

The screenshot shows the LinkedIn Privacy settings page. The 'Privacy' tab is selected. Under the 'Profile privacy' sidebar, the 'Who can see your last name' setting is highlighted. The setting is currently set to 'Full'. A 'Change' link is visible in the top right corner of the setting area. Below the setting, there are two radio button options: 'Full' (selected) and 'Hide your last name from people who aren't your connection'.

### Followers

Choose who can follow you and see your public updates.

## 20 Social Media

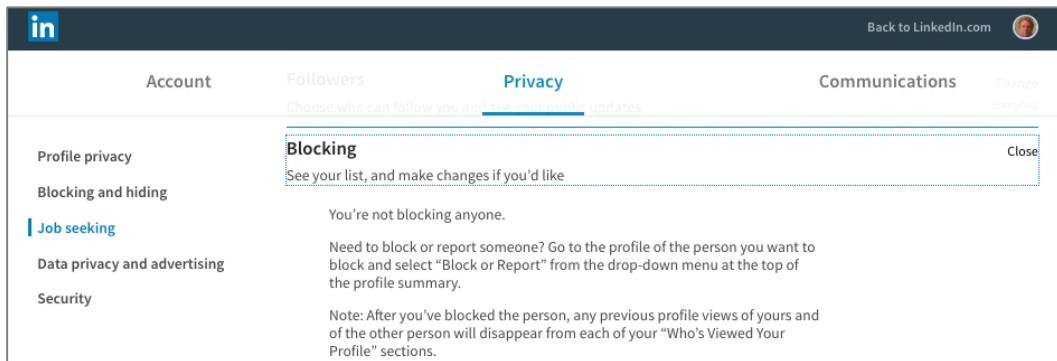

7. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Blocking and hiding* sidebar > *Followers* area, select *Change*. Configure to your taste.

### Blocking

This area displays who you are currently blocking. If you need to block a LinkedIn user, Go to their profile, and then select *Block or Report*.

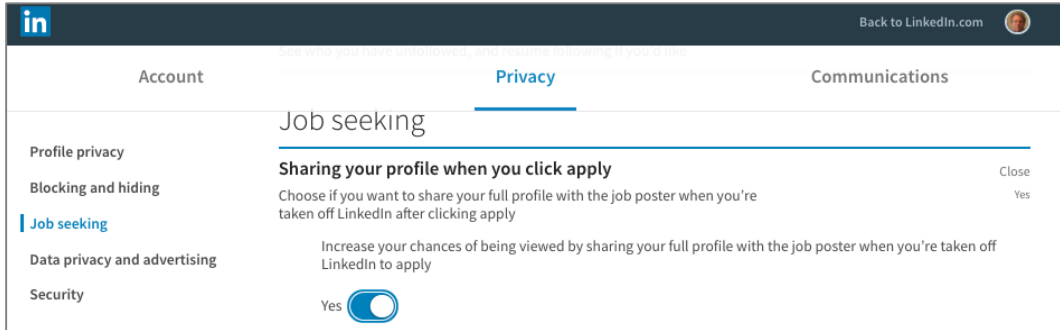

8. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Blocking and hiding* sidebar > *Blocking* area, select *Change*.

### Job seeking–Sharing your profile when you click apply

If you want to share your full profile with a job poster after clicking *apply*.

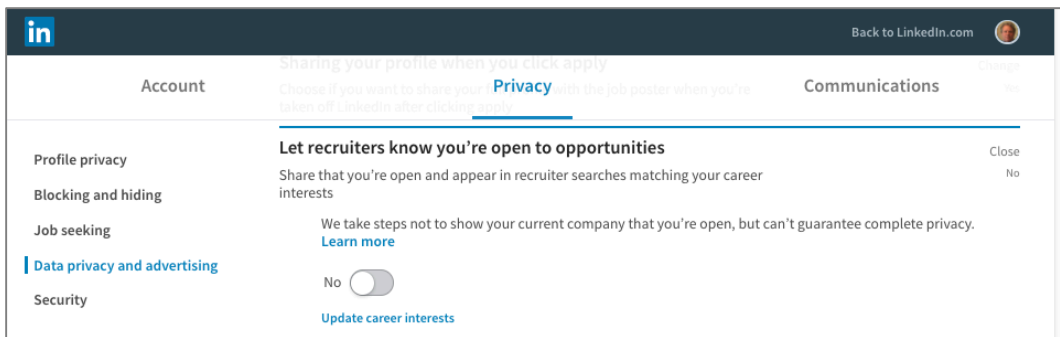

- In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Job seeking* sidebar > *Sharing your profile when you click apply* area, select *Change*, and then configure to your taste.

### Let recruiters know you're open to opportunities

Setting this option to *Yes* will let job recruiters know that you are interested in changing jobs. However, your own company may see this as well.

- In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Job seeking* sidebar > *Let recruiters know you're open to opportunities* area, select *Change*, and then configure to your taste.

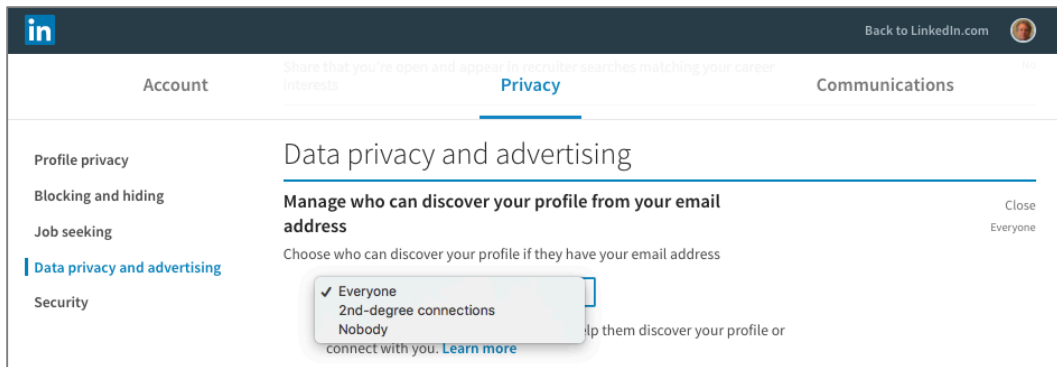

### Data privacy and advertising–Manage who can discover your profile from your email address

## 20 Social Media

This setting allows you to choose if just by having your email address your profile can be found.

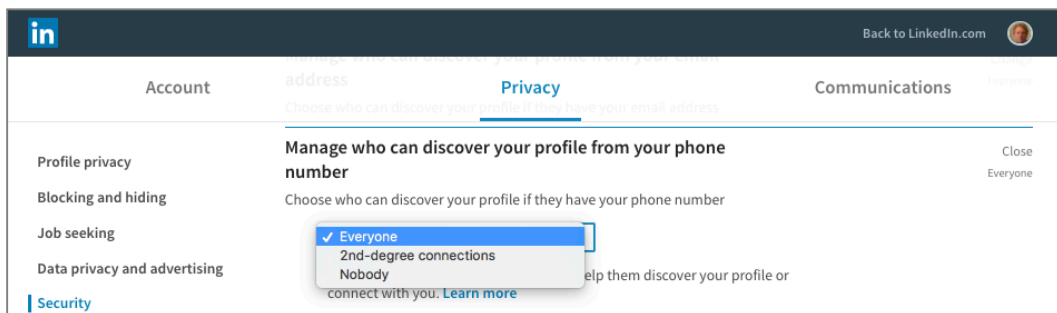

11. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Data privacy and advertising* sidebar > *Manage who can discover your profile from your email address* area, select *Change*, and then configure to your taste.

### Manage who can discover your profile from your phone number

Save as above, but using your phone number to locate your profile.

12. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Data privacy and advertising* sidebar > *Manage who can discover your profile from your phone number* area, select *Change*, and then configure to your taste.

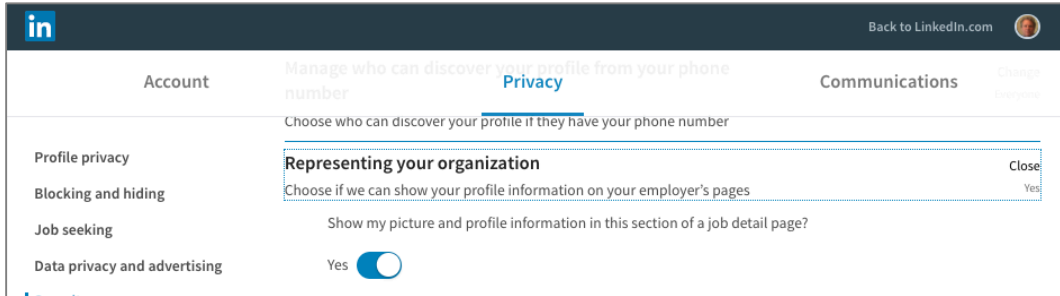

### Representing your organization

Choose if LinkedIn can show your profile on your employer's LinkedIn pages.

## 20 Social Media

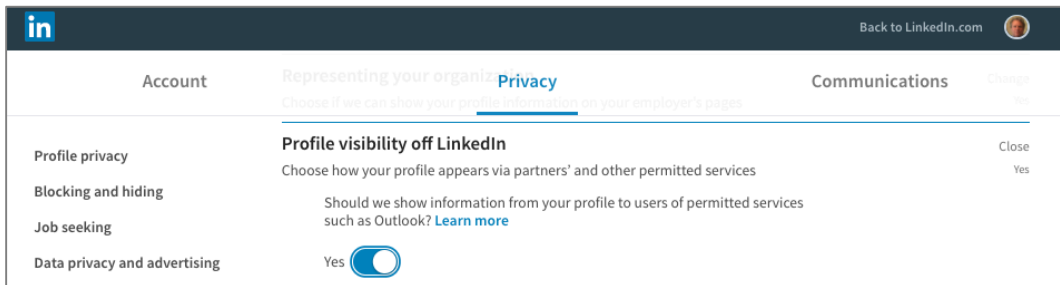

13. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Data privacy and advertising* sidebar > *Representing your organization* area, select *Change*, and then configure to your taste.

### Profile visibility off LinkedIn

Choose how your profile appears via partners' and other permitted services.

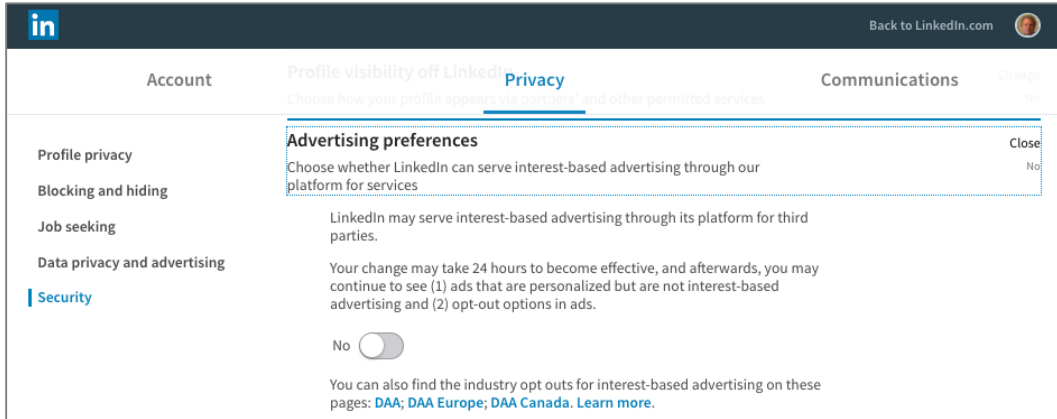

14. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Data privacy and advertising* sidebar > *Profile visibility off LinkedIn* area, select *Change*, and then configure to your taste.

### Advertising preferences

LinkedIn exists for only one reason—to monetize the information they have harvested regarding you and all other members. Choose whether Linked can serve interest-based advertising (as opposed to random advertising).

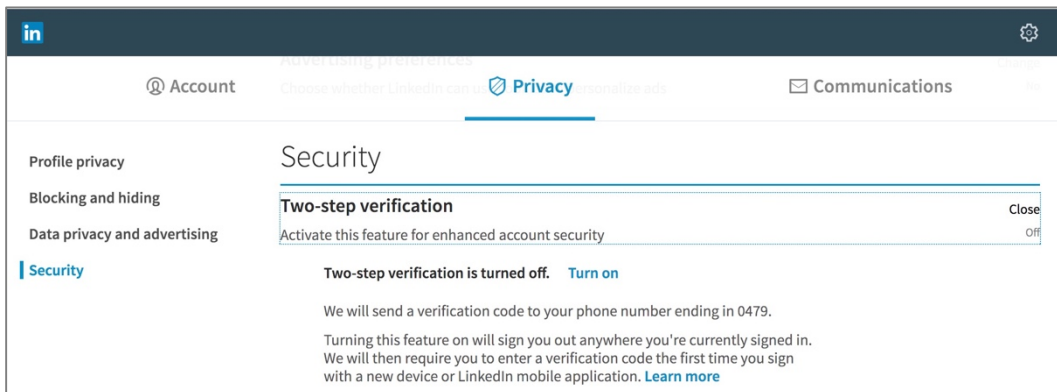

15. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Data privacy and advertising* sidebar > *Advertising preferences* area, select *Change*, and then configure to your taste.

### Security–Two-step verification

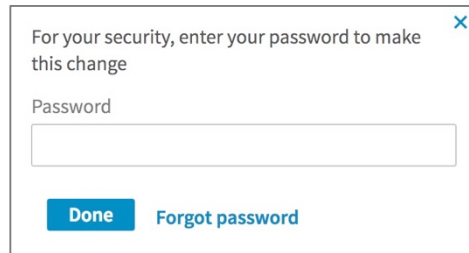

Every password can be broken. The current best solution to blocking criminals from accessing your password-protected accounts is with Two-step verification, also known as 2-factor authentication.

16. In *LinkedIn Settings & Privacy* page, *Privacy* tab, *Security* sidebar > *Two-step verification* area, select *Change*.
17. If Two-step verification is turned off, click *Turn On*.

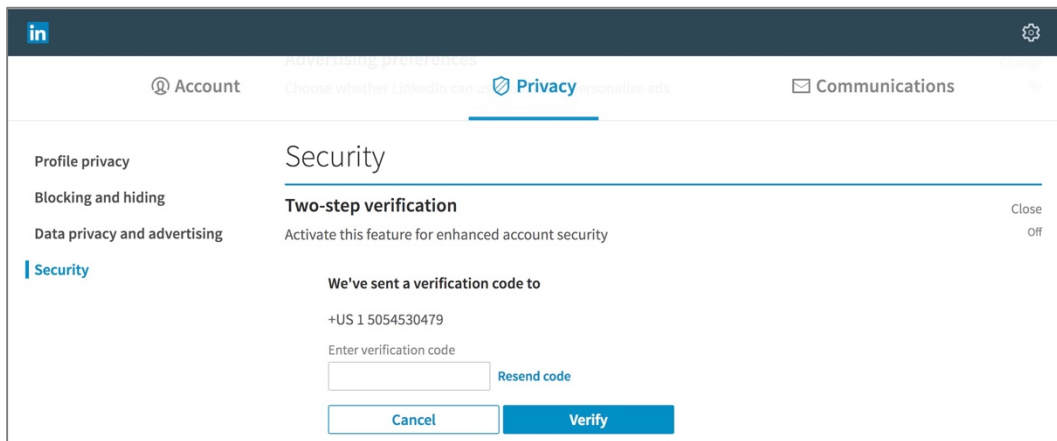

## 20 Social Media

18. In the authentication window, enter your LinkedIn *Password*, and then click the *Done* button.

A dialog box with a close button (X) in the top right corner. The text inside reads: "For your security, enter your password to make this change". Below this is a label "Password" and an empty text input field. At the bottom, there are two buttons: a blue "Done" button and a "Forgot password" link.

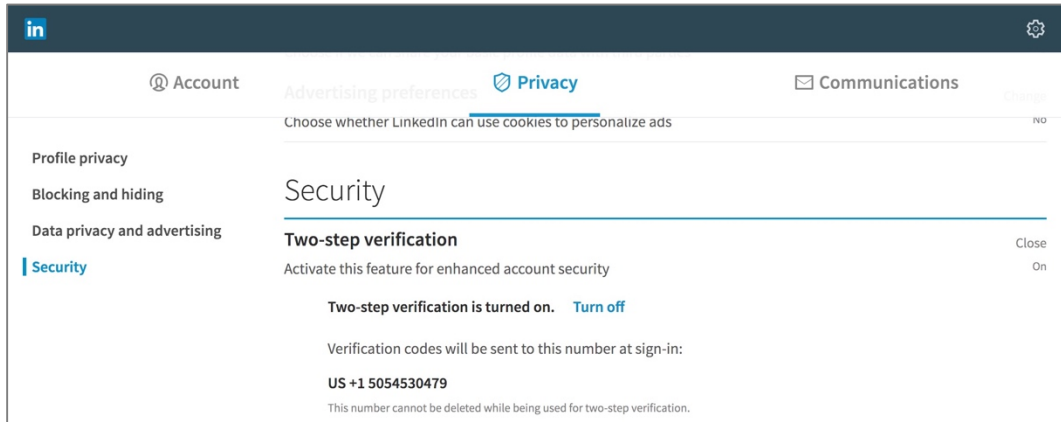

19. Your mobile device will be sent a verification code. In the Two-step verification window, enter it, and then click the *Verify* button.

The LinkedIn Security settings page. The top navigation bar includes the LinkedIn logo, "Account", "Privacy", and "Communications". The main heading is "Security". Under "Two-step verification", it says "Activate this feature for enhanced account security" with a "Close" link and "Off" status. Below, it states "We've sent a verification code to +US 1 5054530479". There is an "Enter verification code" label, an empty input field, and a "Resend code" link. At the bottom are "Cancel" and "Verify" buttons.

## 20 Social Media

20. Once verified, click *Close*.

The screenshot shows the LinkedIn 'Security' settings page. The left sidebar contains navigation options: Account, Advertising preferences, Privacy, Communications, Profile privacy, Blocking and hiding, Data privacy and advertising, and Security (which is highlighted). The main content area is titled 'Security' and features a section for 'Two-step verification'. It indicates that this feature is currently turned on and provides a 'Turn off' link. Below this, it states that verification codes will be sent to the phone number 'US +1 5054530479' and includes a note that this number cannot be deleted while being used for two-step verification. There are 'Close' and 'On' buttons visible on the right side of the two-step verification section.

The next time that you log in to LinkedIn, you will receive a verification code via SMS which must be entered to access LinkedIn.

## 20.5 Google—More Than a Search Engine

Although most people think of Google as a search engine, it has become far more than that. Over one billion people use their mail, maps, YouTube, and Google Play services<sup>4</sup>. Chances are that you use Google every day. The result is a tremendous warehouse of data points about your searches, site visits, hangout partners, purchases, and so much more.

And yet, at the same time Google provides the tools to help guard your privacy. NOW is a good time to put this to use.

### 20.5.1 Assignment: Manage Your Google Account Access and Security Settings

In this assignment, you begin the process of securing a Google account.

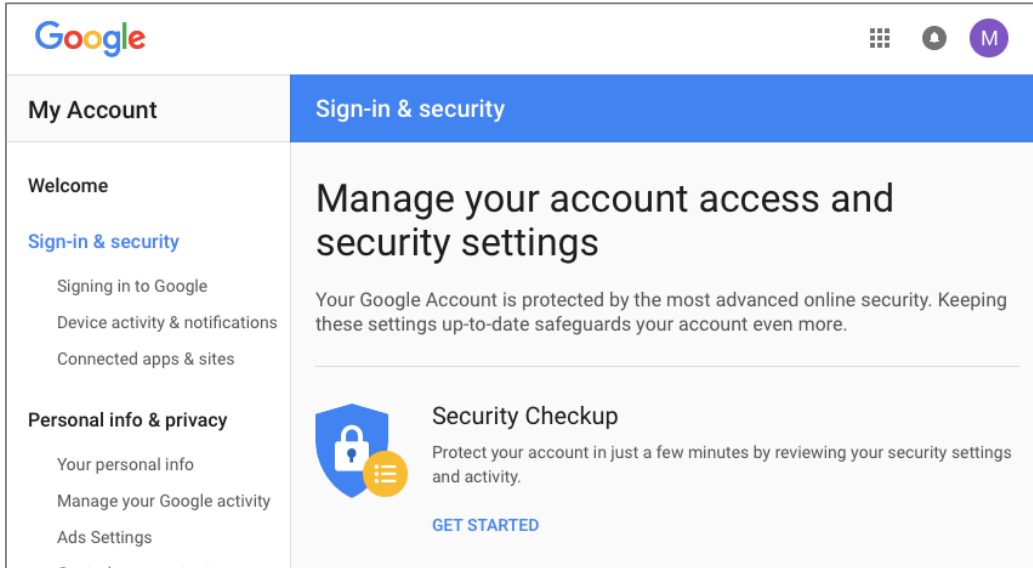

- Prerequisite: Access to an existing Google account.

---

<sup>4</sup> <http://www.digitaltrends.com/web/gmail-joins-the-billion-users-club/>

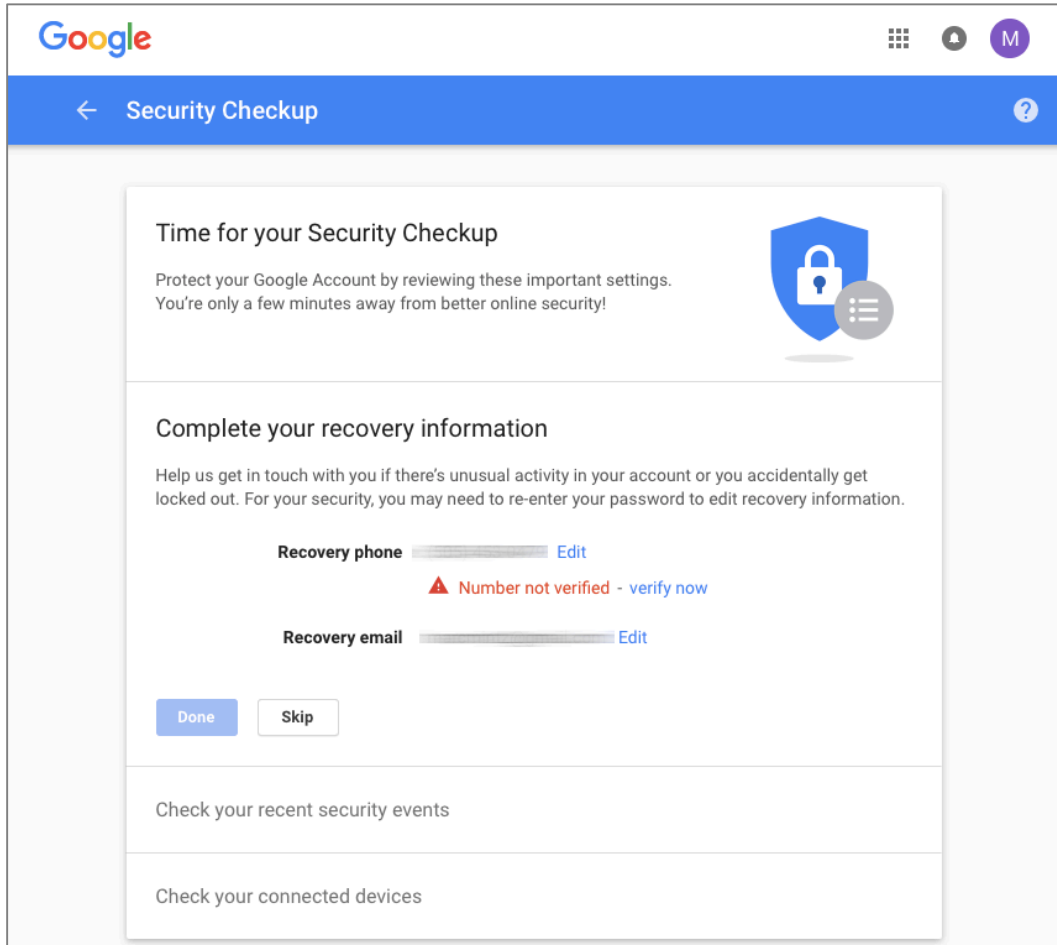

## 20 Social Media

1. Open a web browser to the Google Security page <https://myaccount.google.com/intro/security>, sign in, and then click *Sign-in & security* from the side bar.

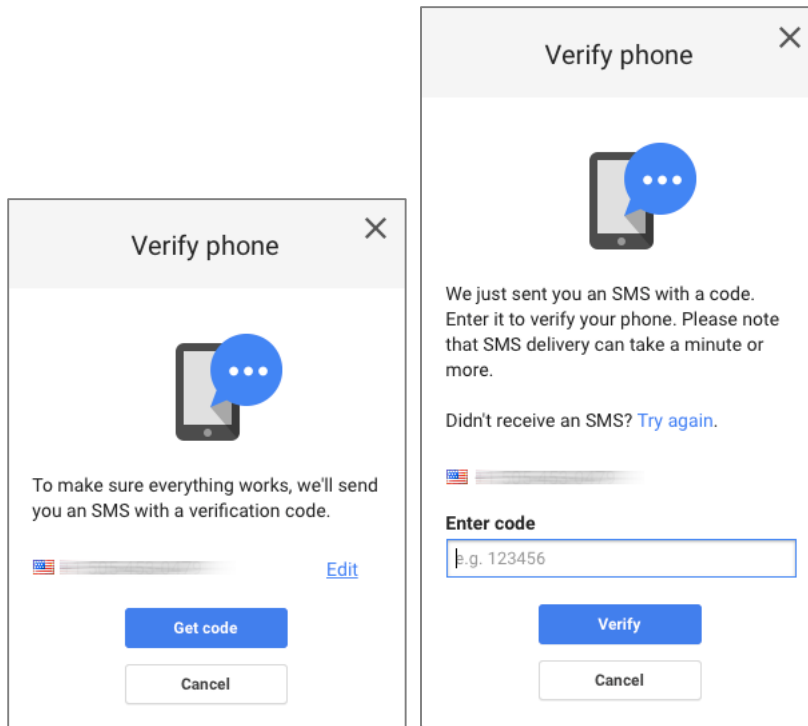

2. Under *Security Checkup*, click *GET STARTED*.

3. In the event Google detects unusual activity on this account, or if you get locked out, you will need to have a recovery phone and recovery email on record with Google. These are used to authenticate your identity.

- **Recovery Phone:** If the listed number is not correct, click *Edit*, and then enter the correct phone number.
- **Number not verified:** If the recovery phone number is not verified, click *verify now*. The phone number can't be used for authentication until it is verified. After clicking *Get code*, a code will be sent to the phone number. Enter the received code, and then click *Verify*.

## 20 Social Media

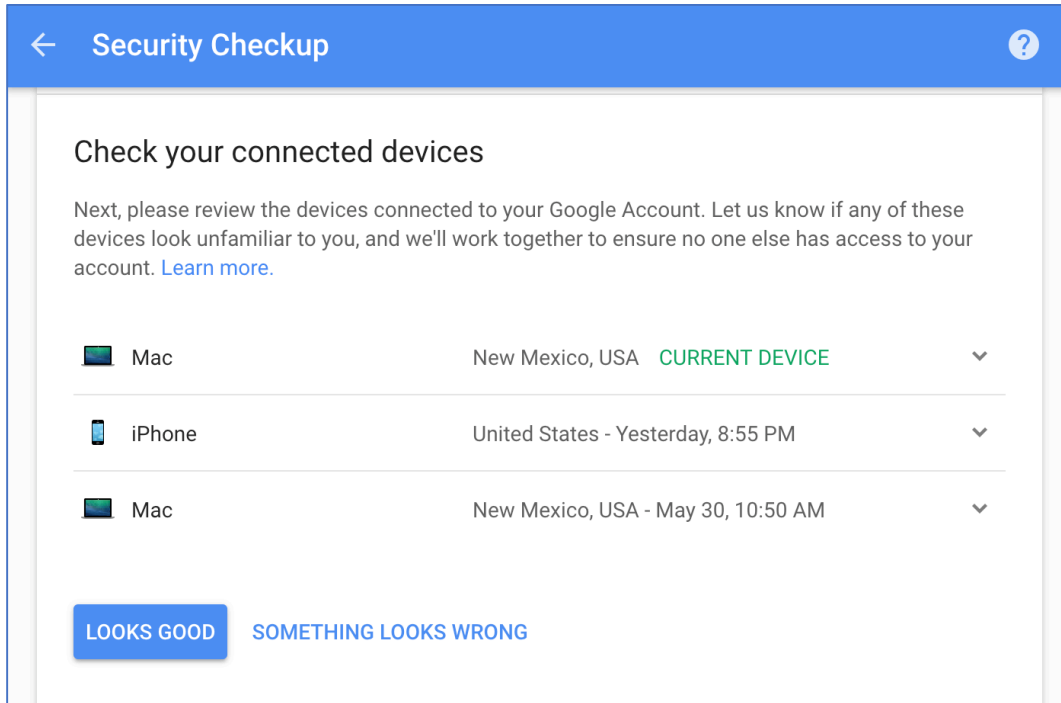

- *Recovery email*: If the listed address is not correct, click *Edit*, and then enter the correct address.
4. When complete, click *Done*.

## Check Your Connected Devices

5. The *Check your connected devices* section appears.

- If anything looks suspicious, click the *Something looks wrong* button, and then follow the on-screen instructions.
- If everything looks ok, click the *Looks good* button.

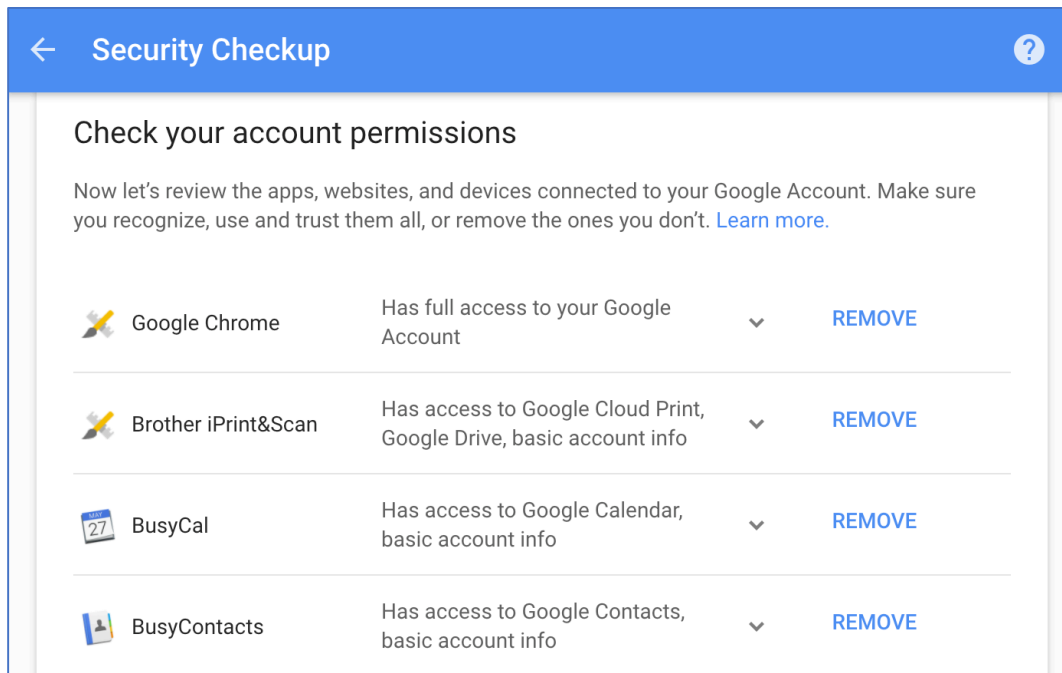

## Check Your Account Permissions

Many websites and apps offer to connect to your Google account. In my example below, Google Chrome, Brother iPrint&Scan, BusyCal, and BusyContacts are all applications that connect to Google for data feeds. Websites may do the same, or

you may have an app or website that you can log into using your Google credentials.

Be mindful that all of these apps and websites may have access to some or all of the information that Google holds about you.

6. The *Check your account permissions* section appears.
7. If you see any item that should not have access to your Google account, click the *REMOVE* link.

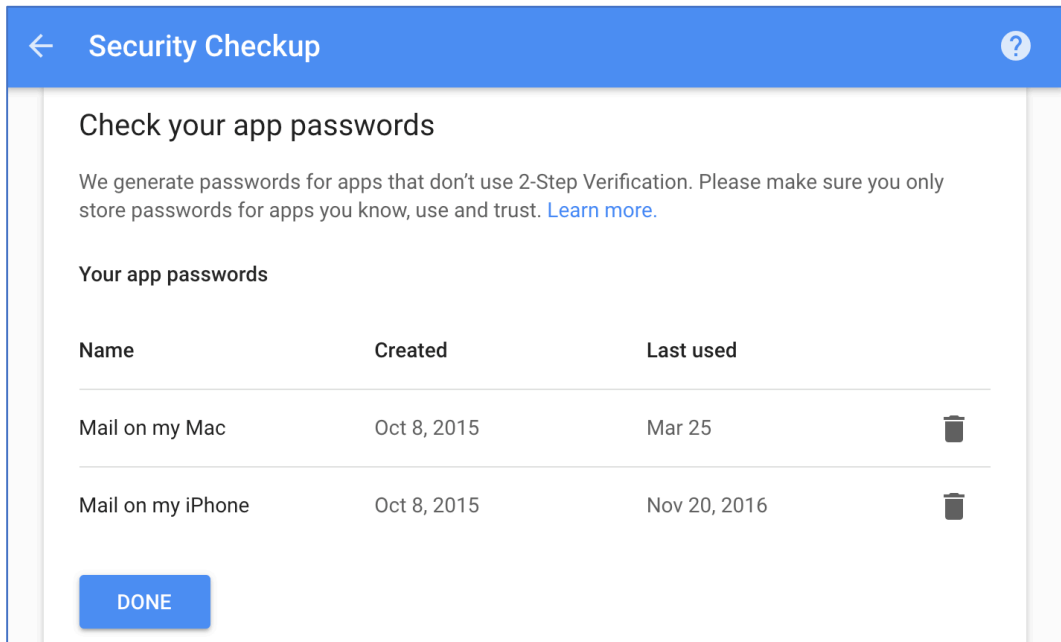

8. When complete, click the *DONE* button.

### Check Your App Passwords

Some apps and applications that connect with your Google account do not support 2-Step Verification. To ensure the security of the data managed by these apps if you do have 2-Step Verification active (and you should), they must have a separate *app password*.

9. The *Check your app passwords* section appears.
10. If you see any apps that you don't use, click the trash icon to the right of the app to remove its app password. This way, nobody else will be able to use the app with your Google account.

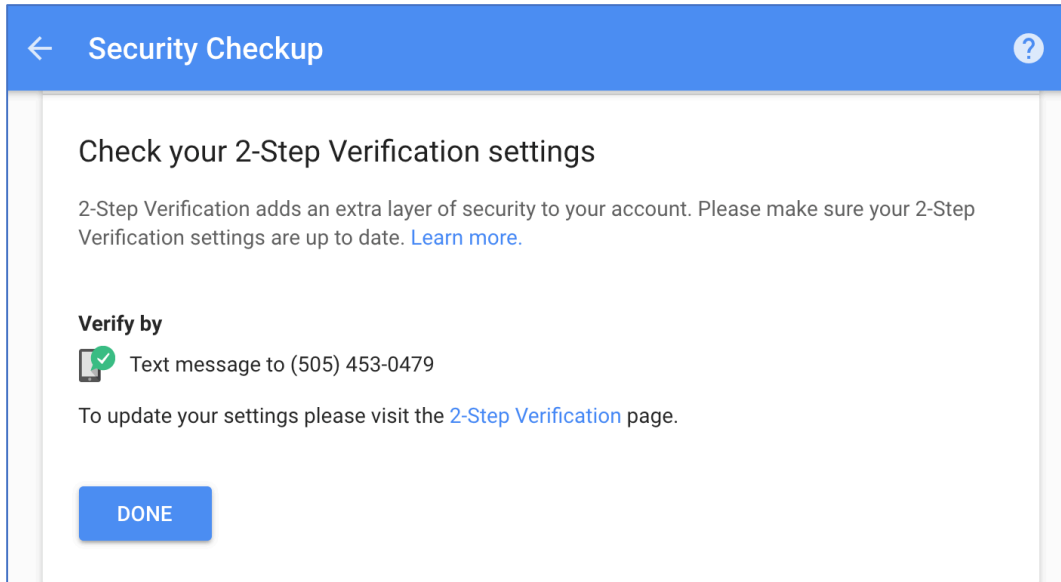

11. When complete, click the *DONE* button.

### Check Your 2-Step Verification Settings

12. If you already have Google 2-Step Verification active, the next section to appear is Check your 2-Step Verification settings.

- If you do not currently have 2-Step Verification enabled, skip to **Account Settings**. In the next assignment, you will enable Google 2-Step Verification.

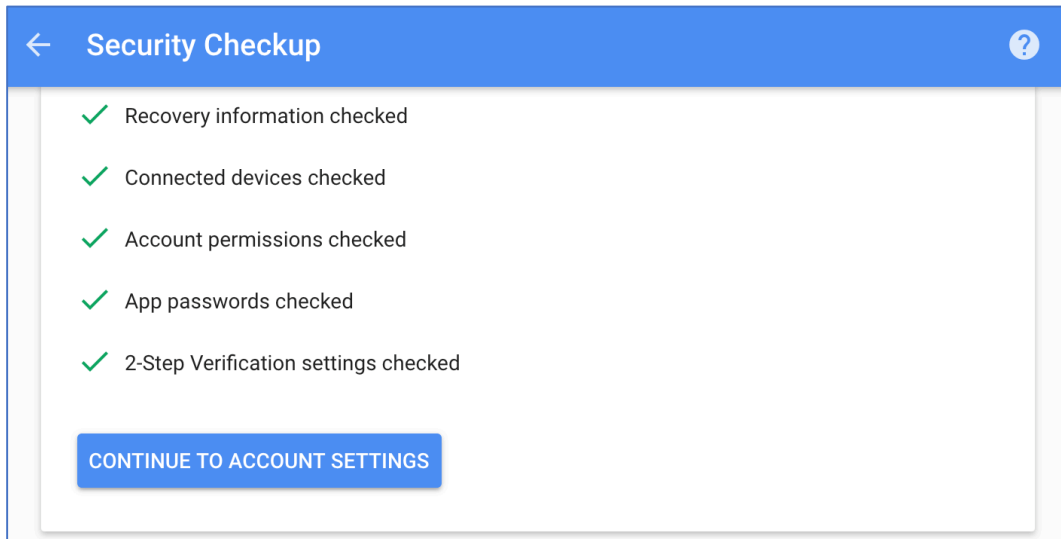

13. If you need to make changes, click the *2-Step Verification* page link

14. When complete, click *DONE*.

## 20 Social Media

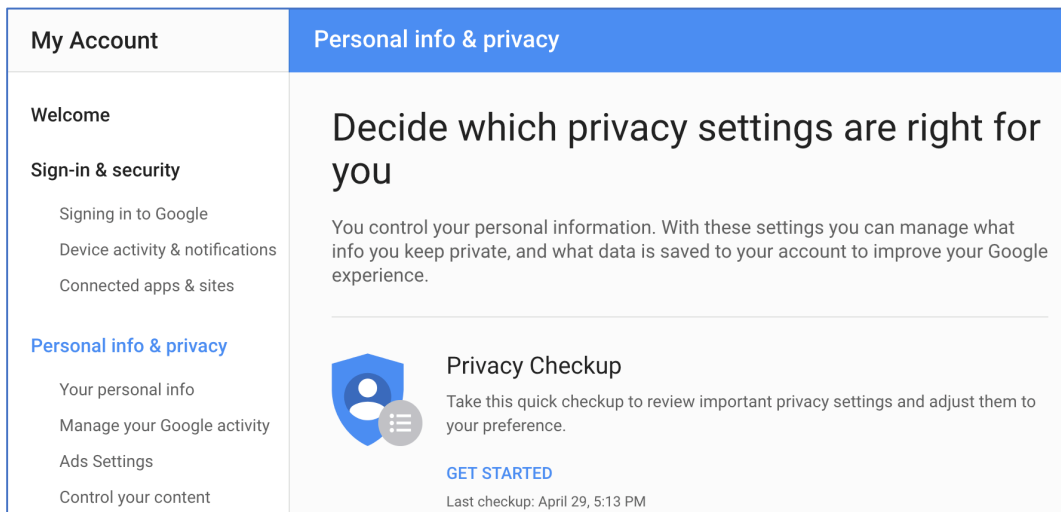

15. Click *CONTINUE TO ACCOUNT SETTINGS*.

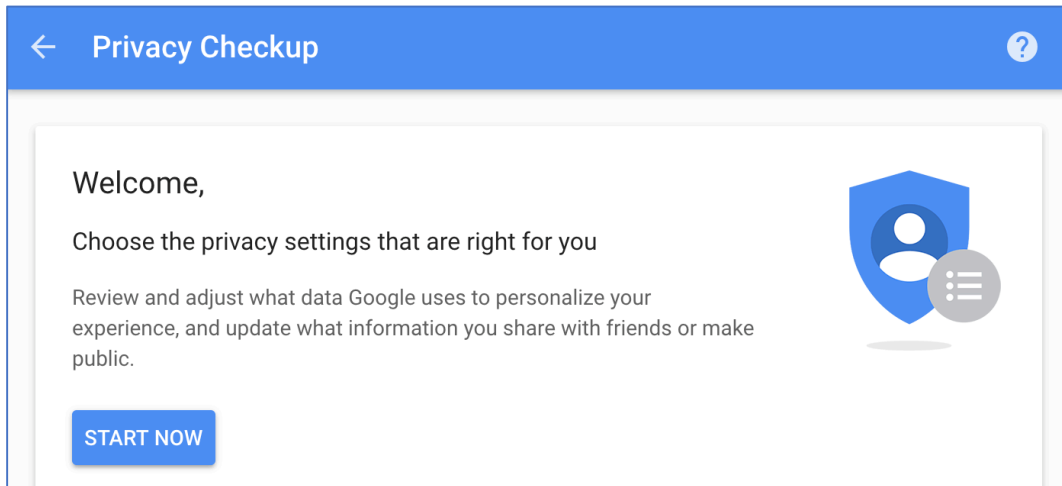

### Account Settings

16. You are returned to the *My Account* page.

17. From the sidebar, select *Personal info & privacy*, and then click the *GET STARTED* link.

18. In the *Welcome* page, click *START NOW*.

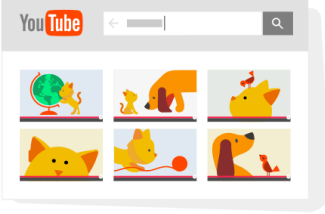

19. In the *Manage what you share on YouTube* page, configure to your taste. Shown below is my recommendation for highest privacy.

← Privacy Checkup ?

### 1. Manage what you share on YouTube

Choose who can see your YouTube videos, likes, and subscriptions, and decide where you share them.

#### Likes and subscriptions

You can share your liked videos, saved playlists, and subscriptions with other YouTube users.

- Keep all my liked videos private
- Keep all my saved playlists private
- Keep all my subscriptions private

#### Your YouTube activity feed

You can choose to automatically have your public YouTube activity show up in your channel's activity feed. Don't worry, we'll never share information about activity on private videos.

[Learn more](#) 

- Post to feed when I add a video to a public playlist
- Post to feed when I like a video
- Post to feed when I save a playlist
- Post to feed when I subscribe to a channel

**NEXT**

20. In the *Help people connect with you* page, configure to your taste. My recommendation for highest privacy is shown below.

The screenshot shows a mobile interface for a 'Privacy Checkup'. At the top, there is a blue header with a back arrow, the text 'Privacy Checkup', and a help icon. Below the header, the section is titled '2. Help people connect with you'. A sub-header reads: 'Let people with your phone number find and connect with you on Google services, such as video chats.' To the right of this text is an illustration of a smartphone displaying a contact card with a profile picture and a green speech bubble icon. Below the sub-header, the phone number '(505) 453-0479' is listed. There are two unchecked checkboxes with the following text: 'Help people who have your number connect with you across Google services. [Learn more](#) Learn more 

21. When complete, click *NEXT*.

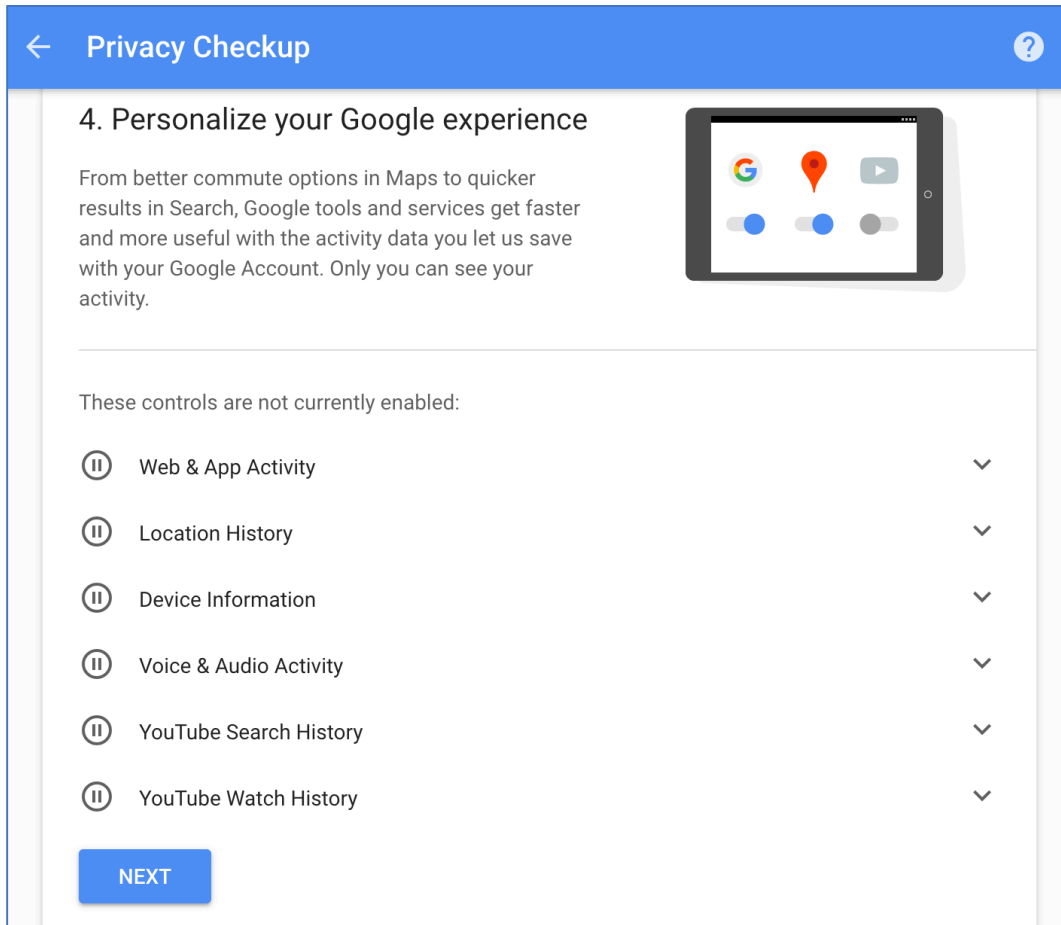

22. In the *Choose what Google+ profile information you share with others*, configure to your taste. My recommendation for highest security is shown below.

The screenshot shows the 'Privacy Checkup' interface for a Google+ profile. The title is '3. Choose what Google+ profile information you share with others'. Below the title, it says 'Decide who can see your information, and choose what information you make public or keep private.' with a 'Learn more' link. To the right is a profile card for Marc Mintz, showing his name, work (Mintz InfoTech, Inc.), education (Western Governors University), location (Albuquerque, NM), and 58 followers. Below the profile card is an 'EDIT WHAT OTHERS SEE ABOUT YOU' link. Under the heading 'Google+ communities', there is an unchecked checkbox for 'Show your Google+ community posts on the Posts tab of your profile.' with a 'Learn more' link. Under the heading 'Photos and videos', there is a checked checkbox for 'Don't feature my publicly shared Google+ photos as background images on Google products & services.' with a 'Learn more' link. At the bottom left is a blue 'NEXT' button.

23. When complete, click *NEXT*.

24. In the *Personalize your Google experience* page, configure to your taste. My recommendation for highest security are shown below.

25. When complete, click *NEXT*.

### **Ads Personalization**

All the information Google has on you may be shared with advertisers. This is done to provide targeted ads. If you prefer not to have your information shared with advertisers, you will still see ads, but they won't be targeted to you.

26. In the *Make ads more relevant to you* page, click *MANAGE YOUR ADS SETTINGS*.

← Privacy Checkup ?

### 5. Make ads more relevant to you

You can change the types of ads you see from Google when you adjust your interests, age and gender or opt-out of ads based on your interests. Please note that you will still see ads after opting out – they'll just be less relevant. [Learn more about Google ads](#) 🔗

[MANAGE YOUR ADS SETTINGS](#) 🔗

NEXT

## 20 Social Media

27. To stop Google sharing your information with advertisers, turn *Ads Personalization* to *OFF*.

### Make the ads you see more useful to you

Control the information Google uses to show you ads

These settings apply when you're signed into Google services as **marc@mintzit.com**.

Ads Personalization works differently when you are on one of the 2+ million websites that partner with Google to show ads. [Control Ads Personalization](#)

#### Ads Personalization OFF

Make the ads you see more useful to you when using Google services (ex. Search, YouTube).

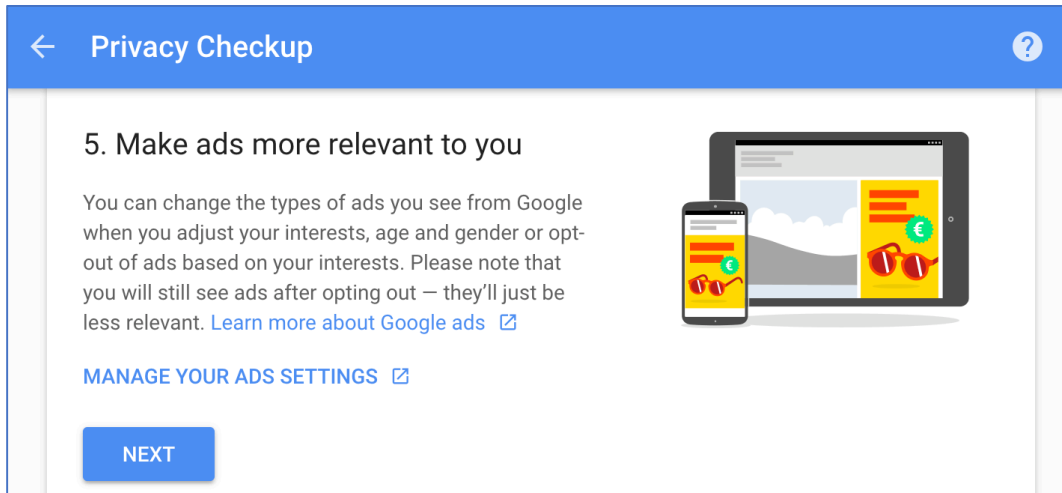

[TOPICS YOU LIKE](#) [TOPICS YOU DON'T LIKE \(0\)](#)

Remove topics you don't like and add ones you do to make the ads you see more useful to you. Topics will also be added as you use some Google services (ex: when you watch a video on YouTube). We're working to include topics from other Google services.

To add a topic you like, click or tap **+ New Topic** below

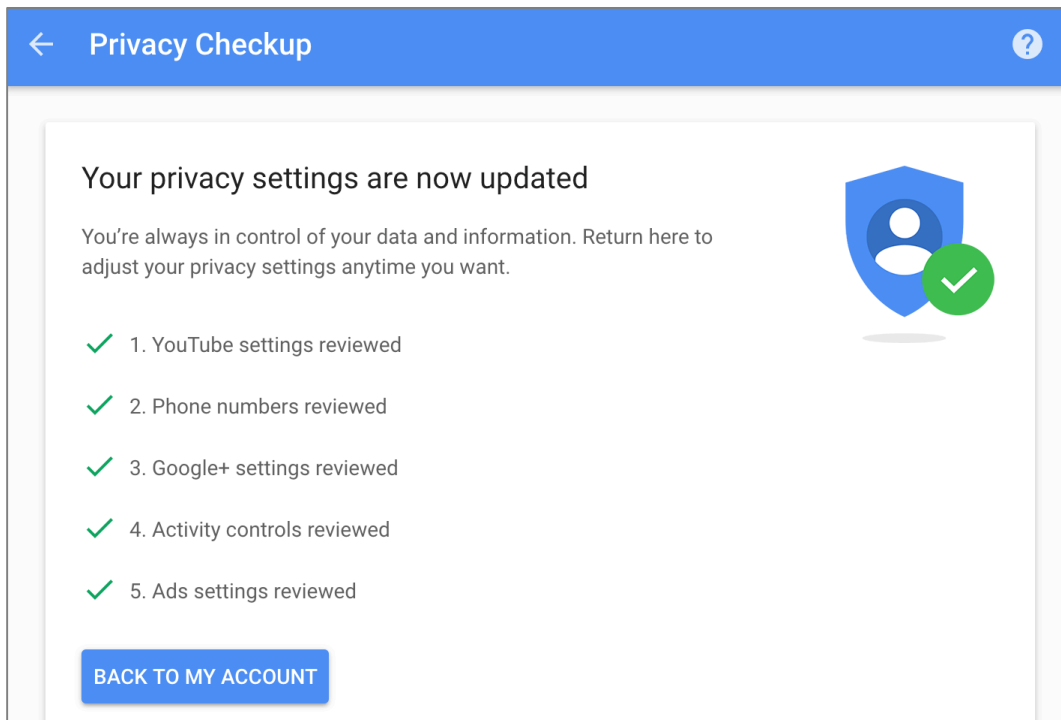

[+ NEW TOPIC](#)

28. Return to the *Privacy Checkup* section, *Make ads more relevant to you* page, and then click *NEXT*.

The screenshot shows a mobile interface for the 'Privacy Checkup' process. At the top, a blue header bar contains a back arrow, the text 'Privacy Checkup', and a question mark icon. The main content area has a white background. On the left, the heading '5. Make ads more relevant to you' is followed by a paragraph explaining that users can change ad types based on interests, age, and gender, but ads will still be shown, just less relevant. A link 'Learn more about Google ads' with an external icon is provided. Below this is a blue link 'MANAGE YOUR ADS SETTINGS' with an external icon. At the bottom left is a blue button labeled 'NEXT'. On the right side of the content area is an illustration of a smartphone and a tablet displaying ads for sunglasses and a Euro symbol.

29. In the *Your privacy settings are now updated* page, click *BACK TO MY ACCOUNT*.

30. From the *My Account* page, you may further configure your personal preferences from the sidebar, or exit. If you haven't yet configured your Google 2-Step Verification, stay right where you are for the next assignment.

### 20.5.2 Assignment: Enable Google 2-Step Verification

As we have discussed before, passwords may be cracked or discovered with a bit of social engineering. Two-factor authentication, or as Google calls it, 2-step verification make it significantly more difficult for someone else to access your account.

In this assignment, you enable Google 2-step verification.

## 20 Social Media

1. If you have just completed the previous assignment, continue to step 2. If not, open a web browser to the Google Security page <https://myaccount.google.com/intro/security>, and then click *Signing in to Google* from the side bar.
2. Scroll down to *2-Step Verification*. If it reports *On*, your account is already protected. If it reports *Off*, click the > icon to continue.

**My Account** | **Sign-in & security**

**Help and Feedback**

## Signing in to Google

Control your password and account access, along with backup options if you get locked out of your account.

**Make sure you choose a strong password**  
A strong password contains a mix of numbers, letters, and symbols. It is hard to guess, does not resemble a real word, and is only used for this account.

Tired of typing passwords? Try using your phone to sign in. [Get started >](#)

### Password & sign-in method

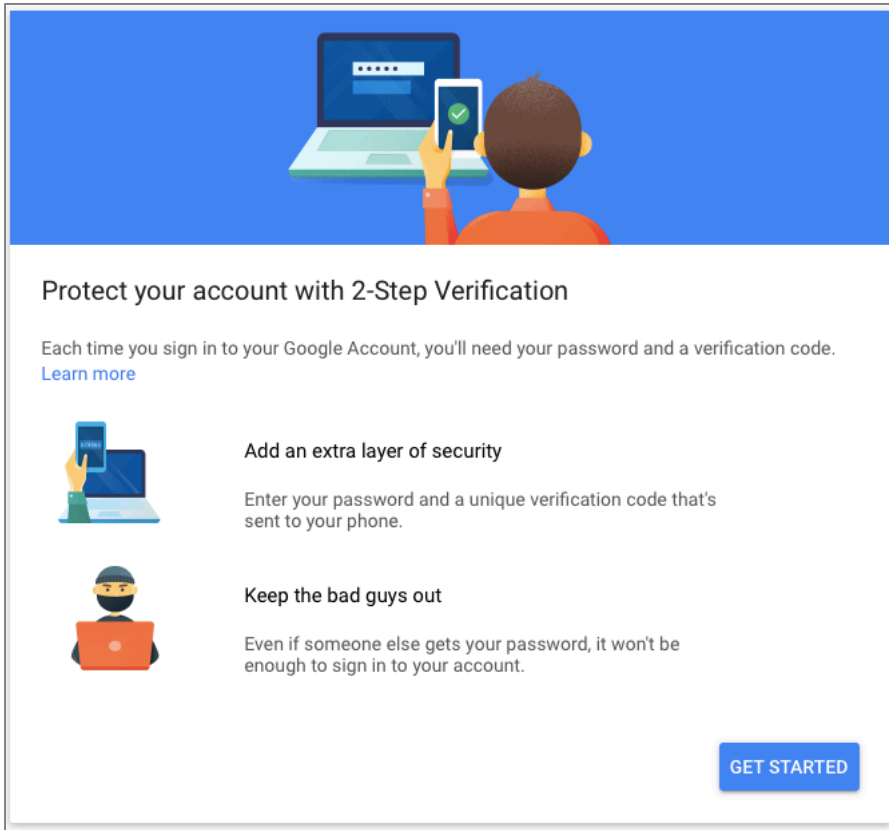

Your password protects your account. You can also add a second layer of protection with 2-Step Verification, which sends a single-use code to your phone for you to enter when you sign in. So even if somebody manages to steal your password, it is not enough to get into your account.

**Note:** To change these settings, you will need to confirm your password.

Password	Last changed: 41 minutes ago	>
2-Step Verification	Off	>

## 20 Social Media

3. At the *Protect your account with 2-Step Verification* page, click the *Get Started* button. The Google login window appears.

4. At the login window, enter your password, and then click the *Sign-In* button.

## 20 Social Media

5. In the *What phone number do you want to use?* field, enter the number you will use, select to get your codes via *Text message* or *Phone call*, and then select *Next*.
  - Note: US-CERT has recently recommended to *not* receive authentication codes via text as this is easier to intercept.

### 2-Step Verification

#### Let's set up your phone

What phone number do you want to use?

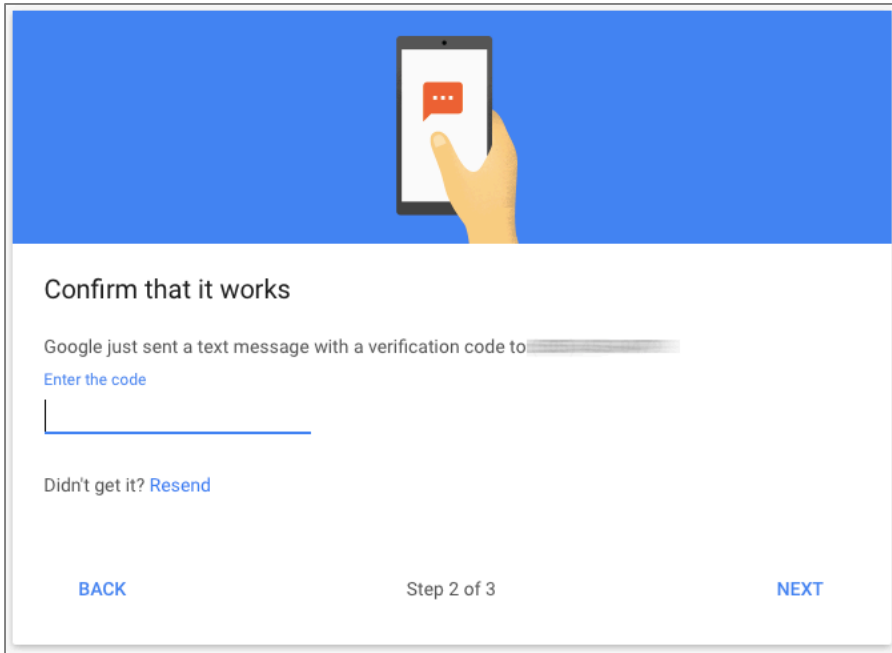

Google will only use this number for account security.  
Don't use a Google Voice number.  
Message and data rates may apply.

How do you want to get codes?

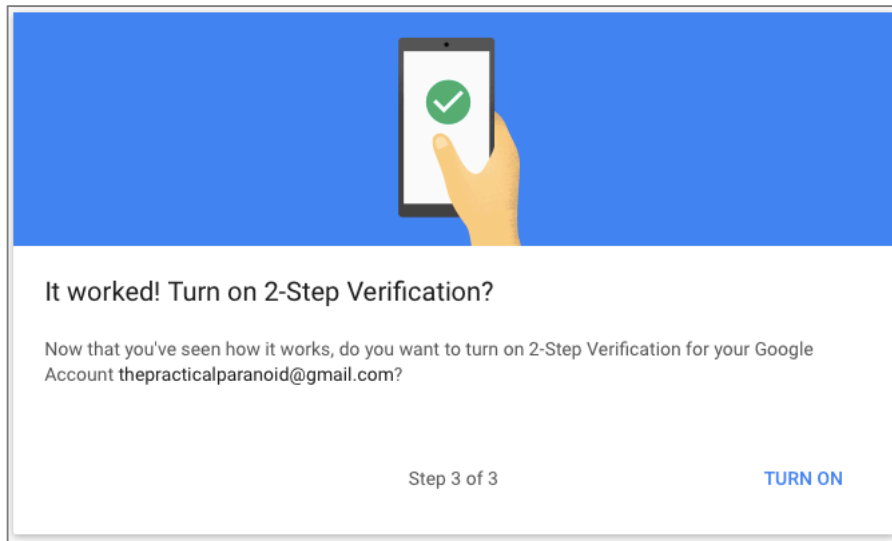

Text message     Phone call

Step 1 of 3 NEXT

6. In the *Confirm that it works* page, enter the code you received, and then select *Next*.

7. In the *It worked! Turn on 2-Step Verification* page, select *TURN ON*.

## 20 Social Media

Your Google account is now hardened with 2-step verification.

# Practical Paranoia Workshops & Books

4 Years Undisputed #1 Best, Easiest, & Most Comprehensive Cybersecurity Series

This is an age of government intrusion into every aspect of our digital lives, criminals using your own data against you, and teenagers competing to see who can crack your password the fastest. Every organization, every computer user, everyone should be taking steps to protect and secure their digital lives.

The *Practical Paranoia: Security Essentials Workshop* is the perfect environment in which to learn not only *how*, but to actually *do* the work to harden the security of your macOS and Windows computers, and iPhone, iPad, and Android devices.

Workshops are available online and instructor-led at your venue, as well as tailored for on-site company events.

Each Book is designed for classroom, workshop, and self-study. Includes all instructor presentations, hands-on assignments, software links, and security checklist. Available from Amazon (both print and Kindle format), and all fine booksellers, with inscribed copies available from the author.

Call for more information, to schedule your workshop, or order your books!
